## A note to the reader

The following report presents the price statistics for May 2014.

- At the end of May 2014 the Consumer Price Index (CPI) shows an increase of 0.3% compared to the end of April 2014. The sector which affected the CPI the most was “Transport” (1.6%), which led to an effect of 0.31 percentage points (ppts) on the  $\Delta$  CPI of May 2014 (0.3%).
- Compared to May 2013 the CPI increased by 0.3%. The sector which affected the CPI the most was “Transport” (3.4%). Specifically, the price of “Operation of personal transport equipment” increased by 3.5% and caused an effect of 0.34 ppts on the end of period inflation of May 2014 (0.3%).
- The period average inflation for the period May 2013 - May 2014 is -1.0%, which is 1.5 ppts higher compared to the period average inflation for the period May 2012 - May 2013 (-2.5%).
- Utilities (Water and Electricity) did not register price changes in May 2014. The price of gasoline increased by 3.6% and caused an effect of 0.24 ppts. The price of diesel registered an increase (0.3%) in May 2014 and had an insignificant effect on the  $\Delta$  CPI of May 2014 (0.3%).

This report is divided in 7 sections. An overview of the monthly percentage changes in the CPI and index per sector is presented in section 1. Section 2 provides the yearly percentage changes in the CPI and index per sector. The development of indices of main sectors and utilities is outlined in section 3. Section 4 presents the percentage change in the CPI of Aruba’s major trading partners and compares the CPI of Aruba and the USA. Section 5 presents an overview of the monthly and yearly percentage changes of the core inflation. Section 6 presents the price movements in food & catering services. The development of the subsistence level is presented in section 7 and is followed by the appendices.

## 1 Monthly change of the CPI

### 1.1 CPI and Inflation

The CPI of the total population of Aruba for the month of May 2014 is 117.54; an increase of 0.3% compared to the CPI of April 2014 (117.17). An overview of the percentage change in the CPI ( $\Delta$  CPI) for different periods during 2013 and 2014 is shown in Table 1. The terms percentage change in the CPI and “inflation” (deflation) are considered similar and are used interchangeably. The inflation over the last 12 months (end of period inflation) is 0.3%, while the deflation over a period of 24 months (period average inflation) is 1.0%.

**Table 1: Overview of  $\Delta$  CPI**

Period		% Changes		Index	
		2014	2013	Current	Last

Figure 1 depicts the monthly  $\Delta$  CPI over a period of one year starting from May 2013, whereas the  $\Delta$  CPI for the month May for the years 2005 to 2014 is illustrated in Figure 2.

### 1.2 Changes in sector

Figure 3 provides an overview of the percentage changes for the indices per sector for May 2014. The percentage change in index is further denoted as  $\Delta$  I. The largest  $\Delta$  I is observed for the sector “Transport” with an increase of 1.6%.

### 1.3 Changes in categories and subcategories

The largest positive and negative  $\Delta$  I is seen in the categories “Other major durables for recreation and culture” (4.6%) and “Accommodation services” (-8.9%). In the “Food and non-alcoholic beverages” sector an increase of 0.4% is observed for the category “Food”, while the category “Non-alcoholic beverages” shows a decrease of 0.1% in May. In the “Transport” sector the major  $\Delta$  I is observed for the category “Transport services” (4.0%), mainly caused by an increase in “Plane tickets” (5.6%). In the “Recreation and culture” sector the major  $\Delta$  I is observed for the category “Holidays” (-5.4%), which is mainly the result of a decrease in “All inclusive holidays or tours” of 11.9%<sup>1</sup>.

The categories which influenced the CPI calculation the most are “Operation of personal transport equipment”, “Transport services” and “Food”, which had an effect of respectively, 0.25, 0.06 and 0.05 ppts on the  $\Delta$  CPI. Reference is made to tables 16 and 17 in Appendices 1 and 2. Table 16 provides an overview of the indices for the months May 2013, December 2013, April 2014 and May

2014 together with corresponding weights per sector and the monthly, year-to-date (ytd), end of period and period average percentage changes for May 2014. In table 17 an overview of the effect on the monthly, ytd, end of period and period average CPI per sector and category for May 2014 is presented. The course of indices for 2008 up to May 2014 is illustrated in Appendix 4.

**Figure 2: Monthly  $\Delta$  CPI for May, 2005 - 2014**

**Figure 3:  $\Delta$  I per sector, May 2014**

<sup>1</sup> The focus is on the four major sectors which are: Housing, Transport, Food and non-alcoholic beverages and Recreation and culture. Together these sectors form 64% of the total weight of the basket of goods and services.

## 2 End of period change of the CPI

### 2.1 End of period change CPI for May 2014

The CPI increased from 117.17 in May 2013 to 117.54 in May 2014, an increase of 0.3%. This  $\Delta$  CPI is the second lowest registered over a period of 5 years for the month May, and is 4.1 ppts higher than the  $\Delta$  CPI registered in 2013 (-3.8%) (see table 2).

Table 2: End of period  $\Delta$  CPI for May, 2010 - 2014

### 2.2 Changes in sector

An overview of the percentage change per sector over the period May 2013 - May 2014 is presented in table 3. The largest  $\Delta$  I is observed for the sector "Recreation and culture" with a decrease of 5.4%. The decrease in the "Recreation and culture" sector is mainly caused by a decrease in the category "Holidays" (-36.5%). Furthermore, an increase of 3.4% and a decrease of 3.0% are observed for respectively the "Transport" and "Household operation" sectors. A comparison of the  $\Delta$  I's for the years 2013 and 2014 is provided in figure 4.

### 2.4 End of year change CPI 2005 - 2014

The end of year  $\Delta$  CPI for the period 2005 - 2014 is shown in figure 5. The  $\Delta$  CPI for 2014 is calculated by comparing the CPI of May 2014 with the CPI of December 2013. At the end of each year, the end of year percentage change equals the ytd  $\Delta$  CPI. The ytd  $\Delta$  CPI for May 2014 is 0.5%.

## 3 Development of indices of main sectors and utilities

### 3.1 Indices main sectors

The four major sectors, “Housing”, “Transport”, “Food and non-alcoholic beverages” and “Recreation and culture”, constitute 64% of the total weight of the basket of goods and services, which are observed on a monthly basis. An overview of the course of indices for 2008 up to May 2014 per sector and for the CPI is provided in figures 9-1 to 9-12 in Appendix 4.

Changes in the indices of the sectors “Housing” and “Transport” are mainly the result of changes in the international oil prices and prices of utilities during the respective months. The development of indices of utilities during the respective months. The development of electricity, fuel surcharge, electricity, water, gasoline and diesel prices is provided in table 5 and in the adjoining figures 6-1 and 6-2.

Table 5: Prices of utilities, gasoline and diesel, 2013 - 2014

### 3.2 Electricity

The price of electricity is determined in Aruban florins (Afl.) for an average usage by households. The average usage is 725.5 kWh per month. The electricity price for an average consumption of 725.5 kWh did not change in May 2014, it remained at Afl. 306.75. Figure 6-1 provides an overview of the course of changes in the electricity price for the period 2009 to 2014.

The component in the electricity tariff which is sensitive to price changes is the fuel surcharge (brandstofclausule). Fuel surcharge for a usage of electricity up to 500 kWh surcharge did not change in May 2014, it stayed at Afl. 24.60 cents per kWh. Fuel surcharge for a usage of electricity between 501 - 1000 kWh did not change in May 2014, it stayed at Afl. 30.90 cents per kWh.

### 3.3 Water

The price of water is determined in Afl. for an average usage (water consumption) by households. Figure 6-1 provides an overview of the course of changes in the water price for the period 2009 to 2014. The water price for an average usage by households did not change in May 2014, it remained at Afl. 137.05.

### 3.4 Gasoline and Diesel

The retail price of gasoline increased by 3.6% from 228.6 cents per liter in April 2014 to 236.8 cents per liter in May 2014. In May 2014, the retail price of diesel registered an increase of 0.3% from 205.0 cents per liter in April 2014 to 205.7 cents per liter.

## 4 Percentage change CPI of Aruba's major trading partners

### 4.1 Comparison of the CPI of Aruba and the USA

Table 6 provides an overview of the  $\Delta$  CPI of Aruba's major trading partners starting from May 2013. In May 2014 the  $\Delta$  CPI of the USA and the Netherlands were respectively 0.3% and -0.3%. The  $\Delta$  CPI of Curaçao for May 2014 is not yet available.

## 5 Core inflation

### 5.1 Core inflation

Core inflation is a measure of inflation which excludes certain items that face volatile price movements e.g. food products and energy. By calculating the core inflation these more volatile components are eliminated from the inflation. Core inflation indices serve to assess the mid- and long-term trend of the overall price level. For the purpose of adjusting monetary policy, many economists focus more intently on the core rate of inflation, as this allows for an in-depth assessment of inflationary processes ongoing in the economy.

### 5.2 Monthly change of the core inflation

In May 2014 the core inflation (measured over the period May 2013 - 2014) was 0.1%, 0.4 ppts higher compared to May 2013. In May 2014 the food index shows an increase of 0.1%, while the energy index had a decrease of 5.4%. Over the past year the food index decreased by 0.4 ppts and the energy index increased by 4.9 ppts. Table 9 provides an overview of the monthly inflation and core inflation starting from May 2013.

## 6 Development of Food & catering services

### 6.1 Monthly change of Food & catering services for May 2014

The “Food & catering services” index shows an increase of 0.3% in May 2014, after a slight increase of 0.03% in April 2014. The index for “Food at home” shows an increase of 0.3% in May, as eight of the eleven “Food at home” indices increased in May 2014. The “Potatoes and other tubers” index registered the largest increase (5.1%) in May and was mainly caused by an increase of 6.7% in the index for “Potatoes”. Furthermore, increases of 1.7% and 0.7% were posted in the indices for “Vegetables” and “Fish and other seafood”, respectively. The “Oils and fats” index registered the largest decrease (-0.7%), its fifth consecutive monthly decline, followed by decreases of 0.2% and 0.1% in the indices for “Meat” and “Non-alcoholic beverages”.

Table 11 provides an overview of the corresponding weights per food group together with the percentage changes and effect for May 2014.

## 7 Subsistence level

### 7.1 Subsistence level

The subsistence level is the minimum level of income which is perceived necessary to achieve an adequate standard of living in a given country. The subsistence level is usually determined by estimating the cost of all the essential resources that an average adult consumes in one month or year. This is commonly called a basic needs index, and varies according to the price of food, clothing, housing, transport and other items in the "basket". Equivalence scales are used to adjust for the assumed standard of living, of households of different sizes and composition. The scale assigns a weight of 1.0 for the first adult and 0.5 for each additional adult in the household (aged 15+) and a weight of 0.3 for each child (aged 0-14 years). The subsistence level is based on figures of the report "Bestaansminimum 2010" published by the CBS in December 2010 and is monthly updated for inflation using the monthly CPI. The reference unit used in this report is one of a household consisting of two adults and two children (aged 0-14 years).

### 7.2 Monthly change of the subsistence level for May 2014

Table 13 provides an overview of the subsistence level for a family of two adults and two children (aged 0-14 years) by sector registered over a period of 5 years for the month May. Over a period of one year the subsistence level increased by Afl. 16, from Afl. 4,269 in May 2013 to Afl. 4,285 in May 2014. The "Recreation and culture" sector shows the largest decrease (-Afl. 10), while the largest increase was registered for the "Food and non-alcoholic beverages" (Afl. 21) over this period.

## Glossary

### **The Consumer Price Index and Inflation**

The Consumer Price Index (CPI) measures changes in prices of consumer goods and services by households. Consumer price indices can be intended to measure either the rate of price inflation or deflation as perceived by households or changes in their cost of living. In case of inflation, the percentage change is positive and it indicates a decrease in the purchasing power of the consumers.

### **Monthly percentage change**

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of the previous month.

### **Year-to-date (ytd)**

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of December prior to the year under review.

### **End of period inflation (last 12 months)**

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of the same month of the previous year.

### **Period average inflation (last 24 months)**

The period average inflation is calculated by comparing the annual average CPI of the concerning period with the annual average CPI of the concerning period of the previous year.

### **Effect**

Contribution of all percentage changes (of all respective aggregates) to the CPI.

### **Core inflation**

Core inflation is a measure of inflation that excludes certain items which face volatile price movements. Core inflation eliminates the inflation of certain products that can have temporary price shocks because these shocks can diverge from the overall trend of inflation and give a false measure of inflation. The core rate of inflation is calculated by: total inflation excluding food and energy prices. In part, that is because the core is less volatile and reflects better the relationship of supply and demand in domestic product markets. The core usually is a better measure of the basic rate of inflation that will tend to emerge in the absence of supply shocks.

### **Food & catering services**

The "Food & catering services" index is composed of the indices for the "Food & Non-alcoholic beverages" sector ("Food at home") and the "Catering services" ("Food away from home") category.

### **Subsistence level**

The subsistence level is the minimum level of income which is perceived necessary to achieve an adequate standard of living in a given country. The subsistence level is usually determined by estimating the cost of all the essential resources that an average adult consumes in one month or year. This is commonly called a basic needs index, and varies according to the price of food, clothing, housing, transport and other items in the "basket". The subsistence level is monthly updated for inflation using the monthly CPI.
