Price per copy: Afl. 40.00
Price per CD-ROM: Afl. 30.00

Mail orders outside Aruba

Price per copy: US\$ 27.00
Price per CD-ROM: US\$ 20.00
Including charges for shipping and handling.

Payments should be settled in advance.

Preface

With great pleasure, the Central Bureau of Statistics presents the results of the Population and Housing Census 2000 in this publication. The Census 2000 continues the tradition started in 1961 when the Central Bureau of Statistics of the Netherlands Antilles held the first Census on Aruba. The Census 2000 is the second Census of our young nation organized and executed by the Central Bureau of Statistics Aruba.

The Census depicts the life story of the people of Aruba. The series of tables also describes Aruba at the beginning of a new millennium. The data tell an abstract and anonymous story, presented in numerical format, but not less authentic. Each number encompasses a unique tale. Behind each figure, there is a real person telling about his or her own living condition. Together all these persons tell the story of Aruba's population. We invite you to have a look at the Census 2000 figures. Compare these figures with data from other studies by the CBS and discover the interesting history of a dynamic young country.

The project of Census 2000 was financed by the government of Aruba and coordinated and executed by the Central Bureau of Statistics. Drs. ing. M.J. Balkestein was appointed as census commissioner and was assisted by a Census team, consisting of the following persons: Mrs. M. Plaza-Maduro, BSc., Ms drs. K.J. Kock, Ms ing. J.A.M. Khalil, Mrs. drs. M.R. Vigelandzoon, Mr. R.J.C. van der Biezen, Mr. M.T. Giel, Mr. R.E. Werleman and Mrs. M.J. van der Biezen-Marques, BSc. Technical assistance for the Population and Housing Census was provided by the Netherlands Interdisciplinary Demographic Institute (NIDI), in the person of dr. F.C.H. Eelens, who acted as the resident census advisor. The Dutch government financed the technical assistance. During the Census week 1 persons were directly involved in the enumeration activities. The data from the Census were carefully controlled by a group of six persons, while four others assisted with the tedious task of verification of the data.

The success of the present Population and Housing Census is the result of the dedication of our census team and of other staff members of the Central Bureau of Statistics. The Minister of Economic Affairs, Tourism, Social Affairs and Culture, Mrs. dr. L. Beke-Martinez, helped and encouraged the CBS with this project, this way making a contribution to its success. However, the Population and Housing Census would never have been possible without the superb cooperation of the population of Aruba. We express our gratitude to each person who helped making the Census 2000 a success.

With the publication of Census 2000 the CBS complies with its responsibility of generating and disseminating timely and relevant social-demographic information. Given the variety of themes included in the tables, the Census will be an important tool for conducting socio-demographic research on Aruba and will help to monitor the well being of our people.

Through the Census 2000 project, modern technology in the area of Geographical Information Systems and automatic data capture was introduced at the CBS. This new technology will enhance the possibilities for more up to date and high quality statistical information. We sincerely hope that by providing the right management information to our community, the Population and Housing Census 2000 will contribute positively to the future of our county and its people.

Drs. Rendolf A. Lee
Director Central Bureau of Statistics,

Oranjestad, June 2001

HIGHLIGHTS

Introduction

During the last 10 years Aruba has witnessed a period of constant high economic growth. This growth, triggered by the further development of the tourist industry has brought important changes to the demographic, social and economic characteristics of the Aruban society. The Aruba Census 2000 is the second population and housing count organized since 1986, the year in which Aruba obtained its separate status within the Kingdom of the Netherlands. The results of the Census 2000 offer a unique opportunity for the Aruban community to examine the changes that have taken place since the last Census in 1991.

Fieldwork for the Census 2000 took place during the week of October 14-21, 2000. A total of 1154 enumerators, controllers and supervisors made it possible to wrap up the work in a week's time. A number of tables are presented in this publication and also on CD-ROM. The tables on the CD-ROM are Microsoft Excel 2000 files. To deliver census results to the census users as quickly as possible, the CD-ROM was distributed before this hardcopy with selected tables.

The tables presented are a selected group of cross-tabulations in which basic characteristics of the Aruban population are described. Also included are tables on some housing aspects of the inhabitants of Aruba

Census users who need additional tables that are more specific can contact the census team at the Central Bureau of Statistics. A small fee will be charged for each table that has to be produced.

The first chapter of this publication deals with the organization and execution of the Fourth Population and Housing Census of Aruba. Attention is paid to such items as: questionnaires, geographical division of Aruba, the pilot census, the execution of the fieldwork, data processing, etc. Chapter B focuses on the scope of the Census. Here the various enumeration units in the Census are thoroughly discussed. Definitions of the different concepts used in the census tables are provided in Chapter C. Chapter D addresses the difficult issue of coverage and accuracy of the Census. The selected tables are presented in Chapter E. Appendix I includes the English version of the census questionnaire. Papiamentu, Dutch and Spanish versions of the questionnaire are available at CBS. The geographical division of Aruba is depicted in two maps in Appendix II. The first map represents the highest hierarchical level of the geographical division, the region. The zones within each region are delineated on the second map with a general overview of the geographical division. More detailed information on the Geographical Address Classification system is given in the CBS publication 'GAC-01 Geografische Adressen-Classificatie Aruba' (CBS, Oranjestad, December 1997). A list of tables is included in Appendix III. A glossary with the terms, definitions and concepts used in this publication, is also provided at the end of this publication.

A. Organization and execution of the census

For the execution of the Census, Aruba was divided into 54 enumeration areas (EA). Each of the areas was subdivided into 15 to 21 enumeration blocks. An enumeration block (EB) comprised a territory containing 25 to 35 addresses. An enumeration block had to be sufficiently large to be covered by one enumerator during the census week. Aruba was divided into 1036 enumeration blocks.

A team of interviewers was formed for each enumeration area. A supervisor headed each team. The supervisor was responsible for all the census activities within the enumeration area. One or two assistants were appointed to each supervisor. The main task of these assistants was to inspect the data on the forms for possible errors. A total of 1154 supervisors, assistant supervisors and enumerators participated in the Population and Housing Census. The majority of the census field staff was teachers and public servants. All teachers and civil servants who participated in the enumeration were exempted from duty, with retention of income.

QUESTIONNAIRES

The census data was collected on two forms:

- the housing form and
- the person form.

A copy of these forms is included in Appendix I. The different forms were developed after consultation with approximately 45 important census data users, from within and outside the public sector. To improve comparability with the Census of 1991, a large number of questions were taken from the previous census questionnaires.

The purpose of the housing form was to collect information on the characteristics of the living quarters of the household. Data was gathered on items such as the quality of construction, tenure, type of ownership, number of rooms, and construction material of the living quarters. Separate housing forms were filled in for the different living quarters.

One person form was used for every person in the household. The person form was subdivided into several modules. In each module, information on a specific topic was gathered. Some modules were restricted to persons with certain demographic characteristics. The following subjects were dealt with on the person form:

A- General information	(for all persons)
B- Family ties	(for all persons)
C- Migration	(for all persons)
D- Language	(only for persons 3 years of age and over)
E- Health	(for all persons)
F- Schooling	(for all persons)
G- Marital status	(only for persons 14 years of age and over)
H- Fertility	(only for females 14 years of age and over)
I- Economic characteristics	(only for persons 14 years of age and over)
J- Income	(only for persons 14 years of age and over).

Tables on personal characteristics of the population are grouped according to these categories. To facilitate comparison with the results of the 1991 Census, as far as possible tables are indexed in the same way as in 1991.

PILOT CENSUS

For the preparation of the 2000 Census, a pilot study was conducted during the period April 2nd through April 5th, 2000. In the pilot census, the organizational aspects of the census project were put to a test. Another important goal of the pilot census was to test the questionnaires. Computer programs were developed and tested with data from the pilot census.

After the pilot census, some improvements were made to the original census forms. The pilot census also provided field experience for the group of interviewers who were to act as supervisors during the census week.

TRAINING OF ENUMERATORS

All the enumerators who participated in the Population and Housing Census followed a training session of about 5 hours. Thirty-one training sessions were held in the period September 16th through September 27th, 2000. During these sessions, the contents of the census questionnaires and the procedures to be followed during the fieldwork were explained. Supervisors and assistant supervisors were trained separately. A number of external experts assisted CBS-staff with the training of the enumerators. Trainers used a PowerPoint presentation to instruct enumerators. In this way, points of interest could more easily be stressed.

GEOGRAPHICAL DIVISION

For the analysis of the census data, the census team used the Geographical Address Classification Aruba (GAC). The GAC has a hierarchical structure and consists of three levels: region, zone, and street/barrio. The GAC divides Aruba into 8 regions and each region is further divided into zones and, finally, into streets/barrios. A one-digit code is given to each region; a two-digit code is assigned to the zones, and a five-digit number to the streets/barrios. A full explanation of the GAC system is given in the CBS publication 'GAC-01 Geografische Adressen-Classificatie Aruba' (CBS, Oranjestad, December 1997). In Appendix II we present two maps of Aruba in which the subdivisions into regions and zones are depicted. The GAC system is an indispensable tool for the data classification and analysis of the 2000 Census. The GAC has been set up in such a way that it is valuable for a wide range of applications. Those who are interested in applying the GAC in their own field of work can contact the Central Bureau of Statistics for further information.

One of the most extensive undertakings of the Census 2000 was the preparation of the census cartography. During the period July-October 1999, CBS staff did a first round of fieldwork. The information gathered in the field was linked to digital maps from 1991, obtained from the Department of Land Surveying and Land Registration (DLV) and to aerial photographs taken in 1998. Additional information on new housing schemes and roads was provided by the Department of Public Works. Based on the digital maps and the information gathered in the field, a Geographical Information System (GIS) was created. CBS will continue to update this GIS to be used as an analytical and cartographic tool. To monitor the regional development of the island, data from the 1991 and the 2000 Census will be incorporated in the GIS, together with data from other sources.

The updated maps were used to identify the location of each housing unit (existing or newly build). Each enumerator obtained a detailed map of his/her enumeration block. In each enumeration center a map of the entire enumeration district was displayed. The supervisor and the controller used these maps to monitor all enumeration activities in their own district.

FIELDWORK

The enumeration activities of the Census 2000 started on Saturday October 14th at 8.00 hrs in the morning. At that time, enumerators gathered at their regional Enumerator Centers, where they received a briefing by the Supervisors. Aruba was divided into 54 Enumeration Areas. Every day a member of the census team

visited each of the enumeration centers. In this way, problems could be solved very quickly. Members of the census team were all equipped with cellular phones and could be reached immediately in case of a problem.

An extensive publicity and information campaign was held before the Census. Publicity was made through posters, newspaper articles and advertisements, banners, spots and information programs on radio and television. Each address in Aruba also received a brochure with census information. To increase visibility of the census enumerators, they all wore special red census polo shirts during fieldwork.

During the census week, a total number of 82,742 persons were enumerated in 26,864 households. Data were gathered with reference to the situation at the census moment of October 14th, 2000, midnight. During census week, cooperation was refused at 453 addresses, at 528 addresses some of the occupants could not be contacted and in 1,307 addresses nobody was ever found at home.

POST-CENSUS ENUMERATION

Enumerators used the EB-maps to keep track of all addresses visited. They also noted all successful and unsuccessful visits on 'Progress Forms'. These Progress Forms were scanned immediately after the census week. A database was constructed including all addresses that were not visited during the Census. These lists provided the basis for the post-census enumeration.

After the census week, a new effort was made to enumerate all those who were missed. Interviewers were sent to those addresses where enumeration was not successful. Until the beginning of January 2001, 56 enumerators made serious efforts to reach all those missed during the census week.

In 191 of the 453 addresses, where occupants initially refused to cooperate, enumeration was conducted successfully. 666 addresses of the 1,307, where nobody was home, were visited and 200 out of the 528 partially enumerated addresses were completed. In total were 3454 persons enumerated after the census week.

CODING AND DATA PROCESSING

Data capturing occurred using a combination of optical mark reading, optical character recognition and imaging. 'Eyes and Hands for form' scanning software from 'Readsoft' was used for character translation, verification and data transfer. It took a small team of 4 verifiers about four months to code information on education, profession, region and branch of industry and to verify the scanned information. Information on education, profession, region and branch of industry was projected as images on the screen of the verifiers. The team of verifiers was deliberately kept small to enable better quality control. To translate the description of these variables swiftly into standard codes, CBS used a system of computer aided coding.

Data were extensively edited to detect structure errors, inconsistencies, and non-valid values. As Aruba has a relatively small population, in many cases manual corrections were made. The Integrated Micro-Processing System, developed by the International Department of the US-Bureau of the Census, was used for editing and tabulation.

UPDATING OF THE POPULATION REGISTER

During the Census, the address, names, dates of birth, and sexes of the enumerated persons in a household were registered on a separate form. The main purpose of this form was to supply necessary data to update the Population Register of Aruba. After the Census, all these forms were turned over to the Bureau for Civil Registration.

PRIVACY OF THE INDIVIDUAL CITIZEN

All institutions and individuals involved in collecting and processing the data of the population census have to obey strict legal rules. These rules are contained in an ordinance of the Central Government (published in AB 1990, no.GT 10). This ordinance states that every citizen in Aruba is obliged to cooperate with the population census. On the other hand, through this ordinance, every citizen is protected against any misuse of the information collected in the Census. In this way, every citizen who could bring himself or a direct relative in danger of legal prosecution may refuse to cooperate. All persons who are involved in the population census must restrain themselves from providing all sorts of individual information to third parties. Persons who violate these rules shall be prosecuted.

To protect the individual from any misuse of the data gathered in the Census, some practical measures were taken. Almost immediately after the Census, the forms containing only the address, name, date of birth, and sex of the respondents were turned over to the Bureau for Civil Registration. By separating these forms from the questionnaires, further handling of the Census was made completely anonymous. The use of scanning techniques and semi-automatic coding reduced the handling of census forms by census staff. Moreover, the dissemination of the census data is restricted. The data will only be made public in such an aggregated form that no individual information can be distinguished.

B. Scope of the census

The scope of the census refers to the target group for the population and housing count. There were basically four units of enumeration in the Census:

- the person,
- the family nucleus,
- the household, and
- the living quarters.

Each of these enumeration units is extensively discussed in the subsequent sections. Most concepts and definitions in this chapter and in chapter C were adapted from the 'Handbook of Population and Housing Censuses' from the Department of International Economic and Social Affairs, Statistical Office, United Nations (1992)

Person

The Population and Housing Census in Aruba was a 'de jure' enumeration. Only persons having their usual residence on Aruba were counted. The population mentioned in the census tables is thus a 'de jure' population, this in contrast with a 'de facto' population, which represents all the persons present in the country at a certain moment in time.

Persons with 'usual residence' on Aruba are:

- Persons who, at the time of the census, had been living on Aruba for one year or longer and
- Persons who, at the time of the census, had been living on Aruba for less than one year, but who had the intention to remain on the island for one year or more.

Thus, excluded from the Population Census were:

- Tourists and other persons visiting Aruba for a period of less than one year;
- Arubans living abroad, including persons studying abroad;
- Dutch marines staying less than one year on the island;
- Those prisoners, in the correctional institute of Aruba, whose total time of stay on the island, including the length of their sentence, does not exceed one year.

Family nucleus

Within a household, several social links between people can exist. Family or biological ties and sexual relationships govern these links. Legal or consensual bonds can join persons within a household, thus forming a family nuclei. For the study of family nuclei within the household, two general approaches exist: the formal and the sociological. The approach to be followed depends on the research objectives of the user of the census data. The enumeration strategy of the census allows the classification of the data according to both approaches. The formal approach as well as the sociological approach is discussed below.

Formal approach

The formal approach examines the legal bonds that group persons together in conjugal families. Only legal bonds through marriage, blood, or adoption are considered.

A **conjugal family nucleus** consists of one of the following types:

- a legally married couple without children;
- a legally married couple with never-married children (biological or adopted);
- a father with one or more never-married children (biological or adopted) or
- a mother with one or more never-married children (biological or adopted).

Sociological approach

In the sociological approach, both legal and consensual bonds between persons within the household are considered. Here the concept of sociological family nucleus is used. This type of family consists of both legally married persons (with or without children) as well as persons who are living together on a durable basis, without being married to each other (again with or without children).

The following categories of **sociological family nuclei** are distinguished:

1. **Conjugal family nucleus:** this type includes the same categories as indicated above. However, the conjugal family formed by a single-parent, as mentioned under the 'formal approach', who lives together with a partner to whom he or she is not married is not contained in this category of sociological family nucleus. The nucleus formed by the single-parent, the partner, and the child(ren) is included in the group below.
2. **Consensual family nucleus** consists of one of the following types:
 - a couple, not married to each other, without children, and living together on a durable basis, or
 - a couple, not married to each other, with children (biological or adopted), and living together on a durable basis; the children of the couple should be never-married and not living together with a partner.

Unattached persons

An unattached person is defined as someone who does not form part of a family nucleus. In fact, depending on which approach is adopted; a more specific definition can be given of an unattached person:

Formal approach:

An unattached person is someone with no spouse and no never-married children in the household. An unattached person does not fall under any of the types of conjugal family nuclei mentioned under the 'formal approach'.

Sociological approach:

An unattached person here has the same characteristics as in the formal approach. In addition, the person should not be living together on a durable basis with a partner and should not have children in the same household who are living together with a companion.

Household

A household may either be (a) a one-person household, i.e. a person who makes provision for his or her own food or other essentials for living, without combining with any other person to form part of a multiperson household or (b) a multiperson household, i.e. a group of two or more persons living together who make common provision for food or other essentials for living.

A criterion, to determine if persons belong to the same household is to detect whether these persons use a common room. Another important indicator is that the persons share their meals. In this respect, we must note that a live-in housemaid sometimes belongs to the household where she works and sometimes not. It all depends on whether or not the housemaid has her own quarters where she lives, separately and almost independently, after her daily work.

Type of household

Households are classified by type, according to the number of family nuclei and unattached persons they comprise. The relationship, if any, between the members of the household is also taken into account. Type of household, as presented in the tables, is based on conjugal family nuclei and unattached persons, using the formal approach. Although possible, consensual family nuclei are not used in the classification of the household by type.

The types of household distinguished are:

Collective household

A collective household is defined as a household of more than ten persons without any family relation to each other. Often these households can be found in institutions such as homes for the elderly, orphanages, prisons, etc..

Homeless household

A homeless household is defined as a household without shelter that would fall within the scope of living quarters as defined later. These persons carry their few possessions with them, live and sleep in the streets or in any other space on a more or less random basis. In any population census, it is difficult to enumerate the homeless population. Fortunately, the group of homeless people in Aruba is quite limited. In counting the homeless, the Central Bureau of Statistics received help from the Directorate of Social Affairs. Their assistance proved to be very valuable and was greatly appreciated. In fact, the number of homeless persons is very limited on Aruba. Although more than a few drug addicts ('chollers') live on Aruba, they normally live in 'choller houses'. The fact that they live in a 'house' -whatever its condition- means that they are not homeless.

Non-collective household

- a) One-person household.
- b) Nuclear household, defined as a household consisting entirely of a single conjugal family nucleus.
- c) Extended household, consisting of persons related to each other, but not comprising a nuclear household. An extended household is further subdivided into the following categories:
 - c.1. one conjugal family nuclei and at least one unattached person, all related to each other;

- c.2. two or more conjugal family nuclei and at least one unattached person, all related to each other;
 - c.3. two or more conjugal family nuclei, related to each other, without any other persons;
 - c.4. two or more persons related to each other, but none of whom forms part of a conjugal family nucleus.
- d) Composite household, consisting of persons not all related to each other. A composite household is further subdivided into the following categories:
- d.1. one conjugal family nucleus and at least one unattached person, not related to the conjugal family nucleus;
 - d.2. two or more conjugal family nuclei and at least one unattached person; not all related to each other;
 - d.3. two or more conjugal family nuclei, without unattached persons; not all related to each other;
 - d.4. two or more unattached persons, without any family relations.

Population censuses are not often able to distinguish between the various household types. As in the 1991 Census, we used special questions to make a more detailed classification possible.

Living quarters

Living quarters consist of a building (or part of a building), or any other construction, in which precisely one household resides. Examples of living quarters are: a house, a trailer, a 'cuarto', etc.. According to the definition, a building inhabited by two households consists of two living quarters.

The census only included occupied living quarters. Vacant living quarters were not canvassed. Living quarters under construction were only included if they were already occupied.

Two types of living quarters have to be distinguished:

A **housing unit**, a separate and independent place of abode, used by only one non-collective household. This includes structures of various levels of permanence and quality.

Collective living quarters, structural and independent places of abode intended for habitation by collective households. Collective living quarters usually have certain common facilities, such as cooking and toilet installations, baths, lounge rooms, or dormitories.

Type of housing unit

Housing units are divided into five categories:

- House: A building consisting of a suite of rooms and its accessories .
- Apartment: An apartment in Aruba is in general considered either one of several housing units in a larger building or an annex or small construction in the garden that is used separately by a household.
- Separate room in a house: A separate household can also occupy a room within a house. For instance, a housemaid not belonging to the household of the employer may in some cases occupy a segregated room in the house.

Trailer/container:	The most important characteristic of a trailer is that it is built on a chassis. The wheels of the trailer can be removed, but having a chassis on which wheels can be mounted is essential. In a few cases, containers normally used for the shipment of goods have been converted to serve as a small housing unit.
Cuarto:	A cuarto usually has the following characteristics: <ul style="list-style-type: none"> P mostly of wood or metal sheets and not movable; P separated from the main building; P often no facilities such as water and electricity; P mostly one room only, sometimes with an improvised section used as a kitchen or bedroom; P usually intended for temporary habitation.
Other:	Any kind of housing unit, not included in one of the four previous categories.

Type of collective living quarters

Collective living quarters can be further divided into the following categories:

Homes for the elderly:	Homes for the elderly are set in permanent structures. In these institutions elderly persons live and are cared for.
Orphanage:	Some of the orphanages not only house children without parents, but also children whose parents do not (could not) take adequate care of them.
Nursing home:	A nursing home is an institution where personal and nursing care is provided for persons who are unable to care for themselves because of chronic health deficiencies.
Living quarters for employees:	A number of foreign workers live on premises provided by the employer.
Prison:	Other names used in the publications for this type of living quarters are penitentiary institution and correctional institute.
Other:	The residual category for collective living quarters that do not conform to any of the above-mentioned types.

C. Concepts and definitions

The census time for the Fourth Population and Housing Census was set at October 14th, 2000 at 0.00 hrs. If not otherwise stated, all tables refer to the situation at that time.

In this chapter, definitions are provided for all concepts used during the Census. For a good comprehension of the census tables, the concepts used in these tables should be clearly understood. In our explanation of the concepts, we will follow the same division as in the presentation of the tables. The terms are explained under the section to which they, according to their content, logically belong. For instance, 'economically active population' is explained under 'I. Tables dealing with the economic activity status of the population', although the concept may also appear in other modules of the population tables.

A separate category 'not reported' was included in many of the census tables if cases occurred where information was missing or was not supplied by the respondent.

POPULATION TABLES

A. Tables dealing with general characteristics of the population.

Place of residence

The place of residence is the geographical place where the enumerated person usually resides. We use the GAC-system for the classification of the place of residence. Aruba is divided into regions and zones in the tables. Homeless people are, as often as possible, classified according to the region and the zone where they are mostly present and spend the night.

Nationality

Arubans have the Dutch nationality. As an Aruban, we consider a person who was born on the island and who possesses the Dutch nationality. Table PA.4 does not distinguish between Arubans and other citizens of the Dutch kingdom. For those who are interested in such a distinction, we refer to Table PC.4 where we classify native and foreign-born population by Dutch or other nationality, sex, and (for foreign-born population) duration of settlement in Aruba (years).

During the Census, persons with more than one nationality were classified under the nationality that they considered the most important. In the tables, countries of nationality are only separately stated if the persons with that particular nationality consisted of a significant number. Residents with other nationalities are grouped into the rest categories.

B. Tables dealing with the living arrangements (in households and family nuclei) of the population.

Reference person

The reference person is the member of the household who is either:

- the legal owner of the housing unit, or
- the person responsible for paying the rent.

Where no, or more than one, reference persons in one housing unit can be determined, the oldest among all candidates is assigned as the reference person. This occurs, for instance, in cases of combined ownerships and rent-free housing units.

The reference person is most commonly used as the focal point to which the relationship of all other members of the household is established. The following kinds of relationship to the reference person are distinguished:

- Reference person himself/herself;
- Spouse;
- Child of reference person or of spouse of reference person;
- Parent of reference person;
- Parent-in-law of reference person;
- Brother or sister of reference person;
- Brother- or sister-in-law of reference person;
- Son- or daughter-in-law of reference person;
- Grandchild or great grandchild of reference person;
- Other family of reference person;
- Domestic servant;
- Other person not related to reference person.

For a collective household, no reference person is assigned. As most persons in collective households have no family relationships to another, there is no need to establish a reference person within the household.

C. Tables dealing with migration characteristics of the population.

Native and foreign-born population

'Native population' refers to the persons born on Aruba. 'Foreign-born population' refers to the persons born outside of Aruba. Note that the country of birth is not necessarily the country of nationality. Information about country of birth is given according to national boundaries existing at the time of the Census. Note that the country of birth is only separately stated in the tables if the total number of persons from that country is considerable. Other countries are grouped into regional rest categories.

Duration of settlement

The duration of settlement is the interval of time between the date of the Census and the date the person arrived on the island. The duration of time is expressed in completed years; one year thus means, between one and two years on the island.

D. Tables dealing with languages spoken in the household.

Language

The data on language collected during the Census refer to a) language knowledge of members of the household and b) the language most often spoken by the individual in his or her household. The following languages were discerned:

- Papiamentu
- English;
- Dutch;
- Spanish;
- Portuguese;
- Creole (Patois)
- Chinese
- Sranan Tongo
- French
- Other language(s).

Information is restricted to children 3 years of age and older. For the hearing-and-speech impaired, the language in which they express themselves (or think) was selected as the most often spoken. Mental handicapped who are unable to speak were put as 'non-applicable'.

For persons living alone in the household, the language most often spoken by these individuals was stated.

E. Tables dealing with health aspects of the population.

Handicapped persons

Handicapped persons are persons with a physical or a mental disorder. The handicap is formed by the limitations of the personal abilities due to the disorder.

'Handicapped persons' do not include individuals who are recovering from an illness or an accident and who will be cured within a limited period. Their perspective is, after all, to be completely healed.

Next to a direct question if the person was handicapped or not, four extra questions were asked on the long lasting (6 months or more) limitations a person may experience due to a physical or mental conditions. Information was gathered about the following limitations:

- Difficulty to learn, remember or concentrate
- Difficulty to dress, bath or getting around inside the home
- Difficulty to go outside, for instance, to shop or visit the doctor
- Difficulty to (if necessary) work at a job or business

The questions on difficulty to go outside and to work were restricted to persons 14 years of age and older.

Type of handicap

A relatively crude distinction is made between the various types of handicaps, due to the restrictions which a population census poses to investigate a topic like this. The following types of physical and mental handicaps are discerned:

Physical handicaps

- | | |
|--------------------|--|
| Motor handicap: | This kind of handicap is a consequence of a dysfunction of the limbs. Examples of causes of this impairment are: Parkinson disease, polio, and spasticity. |
| Visual handicap: | This includes blindness and very poor eyesight. |
| Auditory handicap: | This includes deafness and serious hearing impairments . |
| Organ handicap: | This kind of handicap is the result of organ disorders such as asthma, diabetes, stoma, etc. |

In the 1991 Census respondents could indicate only one cause of handicap. In the 2000 Census respondents could indicate as many reasons as necessary to indicate what caused their handicap.

Mental handicaps

Mental handicaps are disorders caused by a failure in intellectual development that results in social incompetence, and is considered to be the result of a defective central nervous system.

The disorders have often originated around the time of birth. In some cases mental handicaps can originate as well from an accident or a disease. Mostly a distinction is made according to the degree of intellectual limitations:

- Idiocy: i.e. a very deep, mental handicap. The disabled person leads a very passive, sometimes vegetating life.
- Imbecility: i.e. a very serious mental disorder. Independent functioning is impossible for the handicapped person.
- Morosity: i.e. a light mental handicap. The mentally retarded person can function moderately independently.

For a hyman, thus also for most census enumerators, the distinction between idiocy and imbecility is often quite vague. Therefore, in the population census these two groups were combined. This resulted in only two categories of mental disabilities :

- Moderate mental handicap
- Severe mental handicap

An extra category 'other handicap' was included. In this category certain deficiencies such as a speech disability was included.

Persons were also asked to indicate about their general health status. Five categories were discerned: perfect, good, moderate, 'sometimes good – sometimes bad', bad. In addition, a question was asked whether the respondent did any physical exercise during the week preceding the Census.

F. Tables dealing with educational characteristics of the population.

School-attending population

The school-attending population consists of those persons who are following a regular education program. A regular program normally spans a period of more than one year and leads to an accredited diploma. The program can be followed during the day or in the evening hours. A regular program can normally be considered to be full-time education.

A few examples of regular programs as they exist on Aruba are: primary school, ETAO, International School, VWO, IPA, EPB, EPI, University of Aruba, Police school, MOVAA.

Various census data users are interested in information about kindergartens, playschools, and day nurseries. Therefore, children attending pre-primary schools were also considered to follow regular education.

ISCED level category of program

The International Standard Classification of Education (ISCED) is an instrument for presenting statistics on education.

ISCED is basically a three-stage classification system, providing successive subdivisions from level of education to field of study to program group. The ISCED level of program which was used in several tables incorporates seven categories. A residual category for education not definable by level is added. The levels of programs used in the ISCED system are:

- Level 0 Education preceding the first level usually begins at age 3, 4 or 5 (sometimes earlier) and lasts from one to three years. School types that fall under this level are: crèche, day nursery, playschool, and kindergarten.

- Level 1 Education at the first level usually begins at age 5, 6, or 7 and lasts for about five or six years. School types at this level are primary school and special primary schools.

- Level 2 Education at the second level, first stage begins at about age 11 or 12 and lasts for about three years. For instance: general programs such as MAVO, HAVO 1-3, VWO 1-3; lower levels of vocational training (EPB, LHNO, ETAO, AHS-1bo, AHS-1lw).

- Level 3 Education at the second level, second stage begins at age 14 or 15 and lasts for about three years. At this level we find general programs (HAVO 4-5, VWO 4-6) and vocational schooling, intermediate level, such as EPI 1-2, MHNO 1-2, MAO 1-2, Associate degree AHS 1-2, Police school, MOVAA 1-2, and nursing program (first two years).

- Level 5 Education at the third level, first stage, of the type that leads to an award not equivalent to a first university degree begins at age 17 or 18 and lasts for about three years. Thus, at about ages 20 or 21, the students who have progressed through the regular school system to complete these programs are usually ready to enter employment. Programs included are vocational education, intermediate level, final year(s) of e.g., EPI, MHNO, MAO, AHS (Associate degree), MOVAA, and nursing program (final year).

- Level 6 Education at the third level, first stage, of the type that leads to a first university degree or equivalent also begins at age 17 or 18 and lasts for about four years. Thus, students who have progressed through the school system to complete their first degree are usually ready for employment or for postgraduate study at about age 21 or 22. It includes programs leading to the usual first degrees such as Bachelor of Arts, Bachelor of Science, 'kandidaatsdiploma', 'HBO-diploma'.

- Level 7 Education at the third level, second stage, of the type that leads to a postgraduate university degree or equivalent includes all education beyond level 6. The degrees and awards obtained in this level take various forms and have different titles from country to country, some of them being Master of Arts, Master of Science, diplôme d'étude supérieure, doctorates of various kinds.

- Level 9 Education not definable by level. The content of this category can only be described in a negative sense, i.e. programs that cannot be fitted into any of the other categories.

Level of educational attainment

For those who were no longer following regular education, data was gathered on their highest educational attainment. The ISCED system was also used for the classification of this information. Almost the same program levels are utilized as above. Persons who did not complete their primary education are grouped together with those with no education at all.

Due to space limitation, only general categories of education are presented in the tables. Those census data users who are interested in a more detailed breakdown of educational attainment can contact the Central Bureau of Statistics .

In addition to information gathered about a person's educational attainment, a question was asked about regular education for which the person did not receive a diploma. In addition, information

was collected about the country in which the respondent followed this education and the number of years he/she followed this education successfully.

A new question on literacy was included in the 2000 Census. A literate person is one who can, with understanding, both read and write a short, simple statement on his/her everyday life. An illiterate person is one who cannot, with understanding, both read and write such a simple statement.

Type of day-care after school

During the Census enumeration information was gathered on where and by whom children under 14 years of age were cared for after school. The following categories were distinguished:

Mother/father at home:	The child is cared for by at least one of his own parents at home.
Other relative at home:	A family member other than one of the parents attends to the needs of the child after school at the child's home.
Paid baby-sitter at home:	A person, who is paid for his or her services, takes care of the child after school at the child's home. Children in collective households are included in this category.
Elsewhere with family/friend:	A relative or friend of the family at a place other than the child's home looks after the child.
Child remains at home alone:	There is no person over 13 years of age who takes care of the child after school.
Childcare out of home:	The child remains after school at a day nursery or playschool, or is looked after by a paid baby-sitter out of home. Children who stay the whole day at a crèche, 'traimerdia', day nursery or playschool are also included in this category.

G. Tables dealing with the marital status of the population.

Marital status

There are five categories of marital status of a person:

- Never-married;
- Married;
- Divorced;
- Legally separated;
- Widowed.

Note that these categories indicate the legal status of the person. If a man is married, but is no longer living together with his wife, his marital status remains 'married'. A clear distinction should be made between 'divorced and 'legally separated'.

Divorced: Refers to the situation where the marriage has been terminated through a legal verdict.

Legally separated: According to the Civil Code (art.154, par.1) married persons are compelled to live together. If, for one reason or the other, the couple may no longer be able to live together, they can request the court of law for either a formal divorce, or a legal separation. By a legal separation, the spouses are exempted from their obligation to live together. However, the legal bond between the spouses remains unaltered.

For each respondent who was ever-married, the month and year of the (last) marriage was asked. For those whose marriage had ended through divorce or widowhood, the year and date of this event was also asked.

Living together on a durable basis

The Census also provides information on consensual bond between two persons. These persons may be married, but not to each other.

H. Tables on the fertility of the female population.

Children ever born

'Children ever born' refers to the total number of live-born children a woman has had from the onset of her reproductive life span up to the time of the Census. Note that only children who were alive at the moment of birth are counted. Next to the question on how many boys and girls the woman ever gave birth to, another question was asked about the number of these children (boys and girls) still alive.

I. Tables dealing with the economic activity status of the population.

Activity status

Data on activity status is restricted to persons 14 years of age and over. The economically active population comprises all persons of either sex, who furnish the supply of labor for the production of economic goods and services, during a specified time-reference period. The time-reference period used in the population census was the week preceding the Census.

Economically active population

The economically active population includes both persons in the civilian labor force and those serving in the armed forces. The civilian labor force encompasses both persons 'employed' and 'unemployed' during the week before the population census.

Employed: The 'employed' comprise all persons 14 years of age and over who, during the week preceding the census, were in the following categories:

(a) Paid employment:

- 'At work': persons who worked for at least four hours for wage or salary, in cash or in kind.
- 'With a job but not at work': persons who, having already worked in their present job, were temporarily not at work and had a formal attachment to that as evidenced by, for example, continuous receipt of wage or salary, an agreement on a date of return following the short duration of absence from their job, etc.

(b) Self-employment:

- 'At work': persons who worked for at least four hours for profit or family gain, in cash or in kind.
- 'With an enterprise but not at work': persons with an enterprise, which may be a business enterprise, a farm or a service

undertaking, who were temporarily not at work for any specific reason.

Unemployed: The 'unemployed' comprise all persons, 14 years of age and over who, during the week before the Census, complied with all three of the following conditions:

- (a) 'Without work', i.e. were not in paid employment or self-employment.
- (b) 'Currently available for work', i.e. able to start a new job within two weeks time.
- (c) 'Seeking work', i.e. had taken specific steps to seek employment or self-employment. The specific steps may include: registration at a public or private employment agency; application to employers; checking at work sites; placing or answering newspaper advertisements; seeking assistance from friends and relatives; looking for land, machinery, or equipment to establish own enterprise; arranging for financial resources; applying for permits and licenses, etc.

Not economically active population

The not economically active population comprises the following functional categories:

- Homemakers: Persons, of either sex, who are not employed or unemployed and who are engaged in household duties in their own home. Domestic employees, working for pay, are consequently classified as economically active.
- Students: Persons of either sex, not economically active, who attend any regular educational institution, public or private, for systematic instruction at any level of education.
- Income recipients: Persons of either sex, not economically active, who receive income from property or investments, interest, rents, royalties or pensions from former activities. Persons who retired early from the public sector using the so-called VUT arrangement ('Vrijwillige Uitdiensttreding' - Voluntary Retirement) are also included in this category.
- Other non-actives: Persons of either sex, not economically active, who are receiving public aid or private support, and all other persons not falling into any of the above categories, such as young persons not attending school and not economically active.

Occupation

Occupation refers to the kind of work done, during the week preceding the Census, by the person employed (or the type of work done previously, if unemployed). For classifying the data on occupation, the International Standard Classification of Occupation (ISCO-88) has been used. The ISCO provides a systematic classification structure that encompasses all occupations of the economically active population.

The classification structure consists of four levels: major groups, sub-major groups, minor groups, and unit groups. There are ten major groups.

The ten major groups of the ISCO classification are:

1. Legislators, senior officials, and managers;
2. Professionals;
3. Technicians and associate professionals;
4. Clerks;
5. Service workers and shop and market sales workers;
6. Skilled agricultural and fishery workers;
7. Craft and related trades workers;
8. Plant and machine operators and assemblers;
9. Elementary occupations;
0. Armed forces.

The ISCO classification system uses 4-digit codes for the unit groups of occupation. The unit group of occupation for all persons of 14 years of age and over was coded and entered in the computer. However, due to space limitation, the tables in this volume only present the classification by major occupational group. Census data users who are interested in more detailed information on the occupations in Aruba can contact the Central Bureau of Statistics.

The following briefly outlines the ISCO-88 major groups and is meant to facilitate the interpretation of the classification.

1. Legislators, senior officials, and managers

This major group consists of occupations in which policy-making and high level management play a primary role. These functions can be executed in the private and in the public sector. Managers at a lower level do not belong to this category.

2. Professionals

This major group includes occupations whose main tasks require a high level of professional knowledge and experience in the fields of physical and life sciences, or social sciences and humanities. The tasks of the members of this group consist of increasing the knowledge and experience, applying scientific concepts and theories to the solution of problems, and teaching the foregoing in a systematic manner.

3. Technicians and associated professionals

This major group requires technical knowledge and experience in one or more fields of physical and life sciences, or social sciences and humanities. The main tasks consist of carrying out technical work connected with the applications of concepts and operational methods in the above-mentioned fields, and in teaching at certain educational levels.

4. Clerks

Occupations with main tasks consisting of secretarial duties, operating word processors and other office machines, recording and computing numerical data, and performing a number of customer-oriented clerical duties, mostly in connection with mail services, money-handling operations, and appointments.

5. Service workers and shop and market sales workers

This major group consists of occupations with main tasks consisting of providing services related to travel, house-keeping, catering, personal care, protection of individuals and property, and to maintain law and order, or selling goods in shops or on the market.

6. Skilled agricultural and fishery workers

The main responsibilities of this group consist of growing crops, breeding or hunting animals, catching or cultivating fish, conserving and exploiting forests and, especially in the case of market-oriented agricultural and fishery workers, selling products to purchasers, marketing organizations, or at markets.

7. Craft and related trade workers

The main tasks of these occupations consist of extracting raw materials, constructing buildings and other structures, and making various products as well as handicraft goods.

8. Plant and machine operators and assemblers

The occupations within this major group are involved in operating and monitoring mining, processing, and production machinery and equipment, as well as driving vehicles and operating mobile plants, or assembling products from component parts. These occupations require the knowledge and the experience to operate this machinery.

9. Elementary occupations

This major group covers occupations that require the knowledge and experience to perform mostly simple and routine tasks involving the use of hand-held tools and, in some cases, considerable physical effort. Only in a few cases do these occupations require personal initiative and judgment. The main tasks consist of selling goods in the street, door keeping and property watching, as well as cleaning, washing, and pressing, and working as laborers in the fields of mining, agriculture and fishing, construction and manufacturing.

0. Armed forces

Members of the armed forces are those personnel who are currently serving in the armed forces, including auxiliary services, whether on a voluntary or compulsory basis, and who are not free to accept civilian employment. It includes conscripts enrolled for military training or other services for a specified period.

Branch of industry

Branch of industry refers to the economic activity of the establishment in which an employed person worked during the week preceding the survey or in which the person last worked, if unemployed. The Aruban Standard Industrial Classification of Economic Activities (ISICAruba 99-first revision) was used for the classification of industrial and business activities in Aruba, based on the International Standard Industrial Classification of Economic Activities (ISICUN 90, third revision). The level of detail has become much greater than ISICUN third revision, in order to be more compatible with the economic structure of Aruba.

The ISIC system uses a four-digit code -as did the ISCO- to classify the economic activities of businesses and other economically active organizations in a country. The hierarchy in the classifications of the branch of industry is made up of divisions (2-digit codes), major groups (3-digit codes), and groups (4-digit codes). Information obtained in the labor force survey is coded at the group level. For analytical purposes, the divisions are grouped in 17 tabulation categories. A letter indicates each of the categories. In this report we will mainly use these tabulation categories.

ISIC Aruba-99 tabulation categories are given below

1. Agriculture, hunting and forestry
2. Fishing
3. Mining and quarrying
4. Manufacturing

5. Electricity, gas and water supply
6. Construction
7. Wholesale and retail trade; repair of motor vehicles and motorcycles and personal and household goods
8. Hotels and restaurants
9. Transport, storage and communications
10. Financial intermediation
11. Real estate activities
12. Public administration and defense; compulsory social security
13. Education
14. Health and social work
15. Other community, social and personal services
16. Other service activities
17. Extraterritorial organizations and bodies

Status in employment

Status in employment refers to the status of an economically active person with respect to his or her employment. Considered is whether the person is employed as an employer, own account worker/small employer, an employee with a permanent job, an employee with a temporary job, an unpaid family worker, or employed in another way.

Employer: means a person who, as an owner, directs a business and employs three or more persons. It should be clear that a household is not a business. A housewife who has three housemaids is not an employer. The director of a foundation, an incorporated business, or government organization is also not an employer.

Own account worker/small employer:

An 'own account worker' or a 'small employer' is an independent, economically active person who gives employment to less than three persons. A carpenter, for instance, who works on his own without any employees, is a 'small employer/own account worker'.

Employee: An employee is a person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece-rates, or pay in kind. A distinction is made between Employee with a permanent job' and Employee with a temporary job'. 'Employees with a permanent job' consist of those persons who, by written or verbal contract, have been hired for a period of six months or longer. 'Employees with a temporary job' include those employees who are hired for less than six months, with or without a contract. A person, who is doing odd jobs for several days at a time, is also classified under this category.

Unpaid family worker:

An 'unpaid family worker' is usually a person who works without pay in an economic enterprise operated by a related person living in the same household.

Other: This category consists of workers such as members of producers' cooperatives.

Person-hours worked

'Person-hours worked' is the sum of all the hours worked by all the persons with certain characteristics. Suppose, for example, that for a certain age group and branch of industry, the total person-hours worked equals '5135'. This means that the persons who belong to the given category have worked, as a group, for a total of 5135 hours during the week preceding the Census. The 'person-hours worked' is important for calculating, for instance, the average hours worked by persons, per age group, sex, and branch of industry.

J. Tables on the income distribution of the population.

Income

In the population census, 'income' refers to gross income in the month preceding the Census. All data on income are presented in Aruban florins. The Aruban florin is pegged to the US dollar at an exchange rate of 1.79 Afl. per 1US\$. The income includes salaries and wages from employment, profits from businesses, pension, welfare, alimony, etc.

The user of the information on income should be aware that the data are presented in an unstandardized form. For instance, no allowance was made for the effect that variation in the number of hours worked has on income.

No tabulations were made for household income. As many respondents did not want to provide information on their exact income, this was unfortunately not possible.

HOUSING TABLES

A. Tables on the type of living quarters.

The concepts appearing under this module, namely 'living quarters', 'housing units', and 'collective living quarters', were already discussed in Section B.

B. Tables dealing with general characteristics of the living quarters.

Tenure of household

Tenure refers to the arrangement under which the household occupies the living quarters. The different categories of tenure are:

Owner-occupant: One of the members of the household is the owner of the living quarters. If a person obtained a house through mortgage or hire purchase, he is considered in the Census to be the owner of the house. If the housing unit is owned by one of the members of the household, it was further examined whether the housing unit was on:

- (a) Property ground: i.e. the owner of the living quarters is also the owner of the terrain on which the living quarters are built.
- (b) Leased ground: i.e. the terrain on which the living quarters are built is leased by the owner of the living quarters from the government for a period of 60 years.
- (c) Rented ground: i.e. the terrain on which the living quarters are built is hired from the government for, in principle, a period no longer than five years. Usually no buildings may be constructed on this type of terrain. However, in practice, a number of constructions have been built on rented grounds.

Tenant: The household rents the living quarters as the main tenant. For tenant households, a division was made between 'furnished' and 'unfurnished' living quarters.

Subtenant: The household rents part of the living quarters as a subtenant from another occupant who is the main tenant.

Other form: In some cases it is possible that persons occupy the living quarters under another form of tenure. For instance, a person, due to his position, can use

an official residence free of charge. In other cases, a person may be given the use of a room or apartment as part of the material benefits of a job. For instance, a housemaid may be provided with free room and board as part of her remuneration.

Type of ownership

Type of ownership should not be confused with tenure of household. Ownership refers to the type of proprietor of the living quarters where the household resides.

The following types of ownership were discerned:

Government-owned:

In some cases civil servants rent housing units, provided by the government.

Publicly owned:

One public corporation dominates the sector of social housing: the 'Fundacion Cas pa Comunidad Arubano' (FCCA). The FCCA not only provides easy loans for construction of own housing, but also is very active in the sector of social housing. The social housing units are administered by the FCCA and rented to families belonging to the lower income classes.

Privately owned:

A privately owned house includes all living quarters owned by individual persons, private firms, or agencies.

Rent

The rent is the monthly amount (in Aruban florins) paid by the household for use of the living quarters.

Number of rooms

A room is defined as a space in a housing unit or other living quarters that is enclosed by walls and covered by a roof. The room should be of a size large enough to hold a bed for an adult; i.e. its area should exceed 4 m². The total number of rooms, therefore, includes bedrooms, dining rooms, living rooms, servant's rooms, kitchen, and enclosed patios. However, excluded are (even if they are of a size larger than 4 m²) bathroom, toilet, hall, veranda, porch, and the rooms exclusively intended for practicing a profession.

Period of construction

The period of construction refers to the period that the major part of the living quarters was built, and not to the time the last changes were made.

Availability of cooking amenities

A question was asked whether members of the household have following cooking facilities in the living quarter: fridge, kitchen sink and stove.

Total area

Total area is not the same as the total surface of the premises. Only the construction (or part of the construction) that comprises the living quarters was measured. For some living quarters, where the occupants could provide no exact figure, the total area was estimated. The total area of the living quarters includes all rooms, bathrooms, and toilets. Excluded are garage, rooms for practicing a profession, open porch, and patio.

C. Tables on some construction aspects of the living quarters.

Material of exterior walls and roofing

Where more than one material is used for the construction of the exterior walls or roof, the most predominant material is stated.

Quality of construction

Quality of construction of the living quarters stands for the overall condition of the building, or part of the building, where the living quarters are located. The enumerator evaluated the quality of construction of the living quarters. To ascertain the quality of construction of the living quarters, the enumerators were asked to assess the condition of five major elements of the building, or part of the building, of the living quarters:

- the roof;
- the walls;
- the floor;
- the ceiling, and
- the doors, windows, and frames.

The condition of every single element is determined to be either good, sufficient, poor, or very poor:

Good: the element is in good condition;

Sufficient: the element shows small deficiencies that can be repaired by normal maintenance;

Poor: the element shows major deficiencies that cannot be repaired by maintenance;

Very poor: significant parts of the element show very serious deficiencies that cannot be repaired anymore, but have to be replaced.

For each element, a score was given ranging from '4' for good to '1' for very poor. After the evaluation of all five construction elements, the scores were totaled. This total score determines the overall condition of the living quarters. A total score of less than 8 indicates a very poor quality of construction; a total score from 8 through 11 signifies a poor quality of construction; with a total score between 11 and 16, the living quarters are considered to be of a sufficient construction quality; the quality of construction is good if the score totals 16 or more.

The expectation is that, through this procedure, a rather objective evaluation is obtained, where the subjectivity and the personal preferences and aesthetical norms of the enumerator played a minor role.

D. Tables dealing with sanitary facilities of the living quarters.

Bathrooms and toilets

Where different households use the same bathroom or toilet, the facility was considered to belong to the household occupying the living quarters with the largest surface. Information was also collected about the drainage system used in the living quarters.

Water use

Respondents were asked whether they used water (e.g. to water the plants) from: a rainwater tank, a rainwater well, septic tank or dam (open water).

E. Tables dealing with car ownership of occupants of the living quarters.

Automobile ownership

Automobile ownership refers to the personal possession of a car by the occupants of the living quarters. Thus, commercial vehicles and official cars were not considered in the enumeration.

F. Tables dealing with goods, facilities and with inconveniences around the living quarter

Swimming pool

Only swimming pools, which are permanent and not removable, were included in the enumeration. If more than one living quarters were situated on one address, the swimming pool was linked to only one living quarter. If possible, the principal living quarter was chosen.

Utilities

Information was gathered about connections the living quarters had to electricity, water, telephone, cable television and Internet.

Computers

A question was asked about the number of (working) computers that members of the household had in their possession.

Air conditioners

Similarly, respondents were asked about the number of air-conditioning units present in the living quarters.

Inconveniences

In some cases, inhabitants of the living quarter may experience inconveniences in their neighborhood, caused by external factors. The census enumerators registered complaints about the following inconveniences:

- Dust (caused by quarrying or sandy roads)
- Air pollution
- Noise (airplane, activities of neighbors, traffic)
- Traffic (unsafely, congestion)
- Flooding after heavy rainfall
- Crime
- Litter and stench (dumped litter, activities in the neighborhood)

D. Accuracy of the census

A "perfect" census is impossible; inevitably errors occur at different stages of the project. This chapter aims at providing a brief insight into these errors and in the way they were dealt with in order to reduce their influence on the quality of the final results.

Errors affecting the accuracy of the Census can be divided into two types:

Coverage error, i.e. the error in the count of the census units of enumeration, resulting from cases having been "missed" or counted mistakenly, either through duplication or erroneous inclusion.

Content error, i.e. the error in the recorded characteristics of the persons (or other units of enumeration) in the census.

Some adjustments were made to compensate for the effects of errors in the census data. For coverage errors this meant inflating the census figures to offset a minor undercount. To cope with the problem of content errors, the raw data were extensively checked; detected errors were corrected.

Errors of coverage

Coverage errors arise from factors such as defective field operations, carelessness on the part of enumerators, misunderstandings, constant absenteeism or lack of cooperation on the part of respondents. Coverage errors can be split into three categories:

- Omissions,
- Duplications, and
- Erroneous inclusions.

Omissions

Omissions result from either:

- Entire households having been missed by census enumerators or;
- One or more persons within enumerated households being missed.

During the Census enumeration, stickers were used to mark enumerated living quarters. In this way, we hoped to minimize omission of entire living quarters or households due to simple oversight on the part of the enumerator. To avoid undercount of specific groups (persons living in hotels, trailer camps, and institutions) different lists were compiled prior to the Census. During the Census, those lists guided the enumeration of these specific groups. A special team of enumerators was formed to count these special cases. For instance, some social workers were hired to enumerate drug addicts in the so-called 'choller houses'.

In the discussion on "missed" persons, the much commented issue of omission of illegal immigrants in the Census should be mentioned. It is hard to find out what proportion of illegal migrants was not counted during the Census. Special efforts were made to include as many illegal migrants as possible in the Census. There is reason to believe that the undercount of illegal migrants is rather small. Often these persons do not stay more than one year on the island. Consequently, most of the illegal immigrants do not comply with the definition of persons to be enumerated.

Duplications

Duplications occur when living quarters, households, or persons are included more than once in the census. This could take place during the enumeration phase or during the data entry phase of the census.

Two measures were taken to avoid duplications during the fieldwork of the Census: first, stickers were used to mark enumerated addresses and second, all regions of Aruba were thoroughly mapped during the months before the Census. After the enumeration, no cases of possible duplications were observed.

Strict procedural rules were established to avoid duplication during data entry. In addition, all data files were systematically checked by computer for the occurrence of duplicate records

Erroneous inclusions

Examples of erroneous inclusions are persons who were enumerated, but who actually died before the Census, or persons who were born after the Census. Limiting the major part of the enumeration to a one-week period reduced the probability of erroneous inclusions.

A few cases of erroneous inclusions were detected during inspections of the questionnaires after the enumeration period. These cases mainly concerned Aruban students studying abroad, who were mistakenly included in the households of their parents.

Correction for under coverage

The evaluations showed a slight undercount in the Census. Mostly based on the records kept during fieldwork and during the post-census enumeration, increment factors were estimated to compensate for the under enumeration of living quarters and persons. After a thorough analysis the overall increment factor was fixed at 1.05.

The estimated increment of 5 percent has been incorporated in the figures of all census tables, irrespective of the type of enumeration unit. The census data user should be aware, however, of the drawback of the use of an increment factor for the presentation of the tables. As it happens, applying an increment factor leads to rounded figures in the tables. As a result, in some cases the detailed items in the tables do not add to the totals. However, to prevent inconsistencies among the totals in the different tables, the decision was made not to correct these apparent miscomputations.

Errors of content

Content errors in the population and housing statistics can result from erroneous or inconsistent reporting of characteristics by respondents, failure on the part of enumerators to obtain or accurately record the required information, and errors introduced during the clerical and processing operation.

Different measures were taken to detect and correct content errors during and after the enumeration. In the field, supervisors and assistant supervisors checked all incoming questionnaires. If a questionnaire contained errors, the enumerator had to correct these errors. If necessary, he/she had to return to the respondents for more information.

All documents were systematically scanned. Beforehand, the scanning software (Eyes and Hands) was extensively tested to reduce the number of errors. Several types of papers, pencils, printers and hardware/software settings were tested to obtain the optimal combination. A team of four verifiers continuously checked the way the computer interpreted marks and characters after scanning. These verifiers were also responsible for coding variables such as country/nationality, education, occupation and industry. Computer aided coding was used to facilitate this work. Purposely, the group of verifiers was kept to a strict minimum to allow better quality control of their activities. A staff member of the census team, who has been involved in coding for years, was present all the time with the verifiers to solve coding problems.

Much of the quality of the census data depends on the degree of cooperation of the population during the census enumeration. If a large proportion of respondents refuse to answer a particular question, than the information about this topic obviously becomes useless.

During the last ten years, significant socio-economic and demographic changes have taken place on Aruba. It is clear that this may have had some effect on the way people cooperated with the Census. Generally, the response of the population to the Census was more than satisfactory. The only questions where a large number of respondents refused to provide information was on income. The census team expected in advance that a large group of respondents would resist giving exact information on their income. An extra question was therefore included. If a person refused to give information about his/her income, a card was shown and the person was asked to indicate in which category his/her income fell. 21394 persons refused to give a direct response to the question on their exact income. After probing, 2570 persons did not even want to give their income category. No attempt was made to impute values of income for those who refused to provide exact information. Consequently, from the present Census it is impossible to calculate household income.

E. Selected tables

A set of selected census tables is presented on the following pages. For a better overview, the tables were divided into two subsets, each containing different modules. The subset of population tables deals with individual characteristics of the population on Aruba, whereas the subset of housing tables focuses on the housing conditions of the population. The modules into which the tables are divided coincide with the modules on the census questionnaires. Thus, each census table falls under one of the following categories:

Population tables

- A. Tables dealing with general characteristics of the population.
- B. Tables dealing with the living arrangements (in households and family nuclei) of the population.
- C. Tables dealing with migration characteristics of the population.
- D. Tables dealing with languages spoken in the households.
- E. Tables dealing with health aspects of the population.
- F. Tables dealing with educational characteristics of the population.
- G. Tables dealing with the marital status of the population.
- H. Tables on the fertility of the female population.
- I. Tables dealing with the economic activity of the population.
- J. Tables on the income distribution of the population.

Housing tables

- A. Tables on the type of living quarters.
- B. Tables dealing with general characteristics of the living quarters.
- C. Tables on some construction aspects of the living quarters.
- D. Tables dealing with sanitary facilities of the living quarters.
- E. Tables dealing with car ownership of occupants of the living quarters.
- F. Tables dealing with goods, facilities and inconveniences around the living quarters.

Once again, detailed items in tables do not necessarily add up to totals due to rounding.

During the last three years the census team of the Central Bureau of Statistics has put a lot of time and effort in the preparation, execution and processing of the 2000 Census. We hope you will find our data useful for your work.

Month Year

38 Are you currently living with your spouse or with a life partner?

Yes No → **GOTO39**

↓

Are you married to this person?

Yes, married to him/her

No, not married to him/her

39 Do you have a job for which you worked 4 hours or more in the past week (or would have worked if you had not been absent due to vacation, illness, pregnancy or a labor dispute, etc.)?

Yes → **GOTO40**

No → **GOTO47**

40 What type of work do you mainly perform?

Indicate only your main profession/job

Name of profession or job

Job description

41 For whom do you work?

Name of company/ organization/ department/ branch

Description of most important activity engaged in by company/ organization/ department/ branch

Address where you actually work

42 How many (full) months have you been working there?

Month(s)

"96" = 8 years or longer, "00" = less than 1 month

43 In which sector do you work?

Private sector (entrepreneur, company or institution)

Public or subsidized education

Government N.V.

Foundation

Local government

Extra-territorial organization (e.g. consulate)

44 Do you perform this work as:

Employer (3 or more employees)

Owner of a small business (1 or 2 employees)

Owner of a small business (no employees)

Salary earner, permanent staff

Salary earner, temporary staff on a contract basis

Unpaid working relative (in family business)

Other (volunteer, member of cooperative)

45 How many hours did you work in the past week (or would you have worked if you had not been absent due to vacation, illness, pregnancy or a labor dispute, etc.)?

Hours

46 How do you usually get to work?

Car, as driver Motorcycle, moped, bicycle

Car, as passenger By foot

ARUBUS Employee transport

Private bus/taxi Lives at the jobsite

→ **GOTO55**

47 Why are you out of a job at this time?

Pupil or student → **GOTO55**

Pensioned/privately means/lives off AOV

VUT

Housewife (homemaker)

Dismissed (left of own accord or was fired)

Recently graduated or just left school

Health reasons

Other reasons

48 Have you been actively looking for work in the past month or were you busy with preparations in order to start your own business?

Yes → **GOTO49**

No → **GOTO55**

49 If you find a job or start your own business would you be able to start working within two weeks?

Yes No

50 How many (full) months have you been looking for a job already or were you busy with preparations in order to start your own business?

Month(s)

"96" = 8 years or longer, "00" = less than 1 month

51 Have you ever worked two weeks or more during last 12 months?

Yes → **GOTO52**

No → **GOTO55**

52 What type of work did you mainly perform?

Name of profession or job

Job description

53 For whom did you work?

Name of company/ organization/ department/ branch

Description of most important activity engaged in by company/ organization/ department/ branch

Address where you actually work

54 How many (full) months did you work there in total?

Month(s)

"96" = 8 years or longer, "00" = less than 1 month

55 What was your gross income in the past month?

Aruban Florins

Afl. _____,00

Fill in "00000" for a person without an income. Fill in "99999" if unknown.

56 *To be filled in if the respondent did not answer the previous question. Show card "Inkomenscategorien".*

In which category does your monthly income fall?

- 1) Afl. 300 or less
- 2) Afl. 301-650
- 3) Afl. 651-950
- 4) Afl. 951-1500
- 5) Afl. 1501-3000
- 6) Afl. 3001-4500
- 7) Afl. 4501-6000
- 8) Afl. 6001-7500
- 9) More than Afl. 7500

57 What is your main source of income?

No income ("00000" for question 55)

Wage/salary

Capital/profits/rent/revenue

Pension/AOV/AWW

Allowance for the handicapped

Welfare

VUT-benefits

Other (e.g. alimony, ...)

CHECK 3

Person is a man → **END OF FORM**

Person is a woman → **GOTO58**

58 How many live-born boys/girls have you had in total?

Boys Girls

Include deceased children, and children who live elsewhere.

No children: record 2 times "00" in above spaces

→ **END OF FORM**

59 How many of these boys/girls are still alive at this point in time?

Boys Girls

Fill in "00" if no boys/girls are still alive.

END OF FORM

Appendix III: List of Tables

POPULATION TABLES

A. Tables with general characteristics of the population

Table P-A1.	Population by single years of age and sex	37
Table P-A2.	Population by place of residence and sex	39
Table P-A3.	Population by place of residence, age and sex	41
Table P-A4.	Population by country of nationality, age and sex	43
Table P-A5.	Population by religion, age and sex	46

B. Tables dealing with the living arrangements (in households and family nuclei) of the population

Table P-B1.	Population in non-collective households by relationship to reference person, age and sex	47
Table P-B2.	Population in non-collective households by relationship to reference person and age, and by age and sex of head	48
Table P-B3.	Population in non-collective households by relationship to reference person, marital status and sex, and population in collective households by marital status and sex	53
Table P-B4.	Households by type and size	54
Table P-B5.	Conjugal and consensual family nuclei by type and size	55
Table P-B6.	Population by age, sex and type of household	56
Table P-B7.	Population in households by type of household, sex and marital status	59

C. Tables with migration characteristics of the population

Table P-C1.	Native and foreign-born population by single years of age and sex	60
Table P-C2.	Native and foreign-born population by age, sex and marital status	62
Table P-C3.	Native and foreign-born population by place of residence and sex	63
Table P-C4.	Native and foreign-born population by Dutch or other nationality, sex and (for foreign-born population) duration of settlement in Aruba (years)	65
Table P-C5.	Foreign-born population by Dutch or other nationality, duration of settlement in Aruba, age and sex	66
Table P-C6.	Foreign-born population by country or region birth, age and sex	67
Table P-C7.	Foreign-born population by age and period of most recent settlement in Aruba	71
Table P-C8.	Native population by age and period of most recent return-migration to Aruba	72
Table P-C9.	Foreign-born population by period of most recent settlement in Aruba and by country or region of birth	73
Table P-C10.	Native population by period of most recent return-migration to Aruba and by country or region of previous settlement	75

D. Tables dealing with languages spoken in the households

Table P-D1.	Population by language most spoken in the household by age and sex	77
Table P-D2.	Population by language most spoken in the household by place of residence and sex	78
Table P-D3.	Population by language most spoken in the household by region of residence, age and sex	80

E. Tables with health aspects of the population

Table P-E1.	Number of persons with particular type(s) of handicap, age and sex	84
Table P-E2.	Handicapped persons by type of handicap, cause of handicap, age and sex	85
Table P-E3.	Handicapped persons by type of household and size of household	88
Table P-E4.	Handicapped persons by age, sex and type of household	89
Table P-E5.	Number of persons with high blood pressure, diabetes or joint illness by age and sex	92
Table P-E6.	Persons with limitations with type of limitation age and sex	93
Table P-E7.	Number of persons by health conditions, age and sex	94
Table P-E8.	Persons six years of age and older who did physical exercise during the week prior to the census	95

F. Tables dealing with educational characteristics of the population

Table P-F1.	School-attending population by age and sex	97
Table P-F2.	School-attending population by region of residence, age and sex	98
Table P-F3.	School-attending population by ISCED level of program, age and sex	99
Table P-F4.	School-attending population by region of residence, region of school and ISCED level of program	100
Table P-F5.	School-attending population by means of transportation to school and region of residence and school	101
Table P-F6.	School-attending children under 14 years of age, type of day-care after school, type of conjugal family to which they belong, and work status of parent(s)	102
Table P-F7.	Population not attending school 14 years of age and over by age, sex and level of educational attainment	103
Table P-F8.	Native population not attending school 14 years of age and over by country or region of study and level of educational attainment	104
Table P-F9.	Foreign-born population not attending school 14 years of age and over by country or region of study and level of educational attainment	105
Table P-F10.	Literate / illiterate population by region of residence, age and sex	106

G. Tables dealing with the marital status of the population

Table P-G1.	Population by marital status, age and sex	107
Table P-G2.	Persons 14 years of age and over living together on a durable basis, married or not married to their partner, by marital status, age and sex	108

H. Tables on the fertility of the female population

Table P-H1.	Female population 14 years of age and over by age and sex	109
Table P-H2.	Female population 14 years of age and over by age, marital status, and number of children ever born	110
Table P-H3.	Female population 14 years of age and over by education attained, age of female, and number of children ever born.	113
Table P-H4.	Female population 14 years of age and over by age and number of children deceased	117

I. Tables dealing with the economic activity of the population

Table P-I.1.	Population 14 years of age and over by activity status, age, and sex	118
Table P-I.2.	Population 14 years of age and over by place of residence and activity status	119
Table P-I.3.	Population 14 years of age and over by activity status, age, sex, and marital status	121
Table P-I.4.	Population 14 years of age and over by activity status and country of nationality (and for Dutch nationals by country of birth)	126
Table P-I.5.	Foreign-born population 14 years of age and over by activity status, Dutch or other nationality, sex, and duration of settlement in Aruba (years)	127
Table P-I.6.	Employed and unemployed population by branch of industry (ISIC major division), age, and sex	128
Table P-I.7.	Employed and unemployed population, attending or not-attending regular school by branch of industry (ISIC major division) and level of education	131
Table P-I.8.	Employed and unemployed population by major occupational group (ISCO major group), age, and sex	132
Table P-I.9.	Employed and unemployed population, attending or not-attending regular school by (ISCO) major occupational group and level of education	135
Table P-I.10.	Employed population by sex and place of work	136
Table P-I.11.	Employed population by means of transportation to work and region of residence and work	138
Table P-I.12.	Employed population by economic sector, age, and sex	139
Table P-I.13.	Employed population, attending or not-attending school, by economic sector and level of education	140
Table P-I.14.	Employed population by status in employment, age, and sex	141
Table P-I.15.	Employed population by (full) months worked at present employment, age, and sex	142
Table P-I.16.	Employed population by hours worked during the week preceding the census, age, and sex	143
Table P-I.17.	Employed population by hours worked during the week preceding the census, branch of industry (ISIC major division), and sex	144

Table P-I.18.	Person-hours worked by employed population during the week preceding the census, by branch of industry (ISIC major division), age, and sex	145
Table P-I.19.	Unemployed population by duration of unemployment (in months), branch of industry (ISIC major division), and sex	146
Table P-I.20.	Unemployed population by duration of unemployment (in months), major occupational group (ISCO major group), and sex	147

J. Tables on the income distribution of the population

Table P-J.1.	Population 14 years of age and over by age, sex, and gross monthly income	148
Table P-J.2.	Population 14 years of age and over by gross monthly income and region of residence	149
Table P-J.3.	Population 14 years of age and over by sex, gross monthly income, and activity status	150
Table P-J.4.	Population 14 years of age and over by gross monthly income and main source of income	151
Table P-J.5.	Population not attending school 14 years of age and over by gross monthly income, level of educational attainment, and sex	152
Table P-J.6.	Employed population by age, sex, and gross monthly income	153
Table P-J.7.	Employed population by gross monthly income, branch of industry (ISIC major division), and sex	154
Table P-J.8.	Employed population by gross monthly income, major occupational group (ISCO major group), and sex	155

HOUSING TABLES

A. Tables on the type of living quarters

Table H-A.1.	Households and population in households by type of living quarters	159
Table H-A.2.	Households and population in households by type and location of the living quarters	160
Table H-A.3.	Non-collective households and population occupying housing units by type and location of the housing unit	162

B. Tables with general characteristics of the living quarters

Table H-B.1.	Households and population occupying housing units by type of housing unit, tenure of household and, for tenant households, ownership of housing unit occupied	164
Table H-B.2.	Housing units by location of the housing unit, tenure of household and, for tenant households, ownership of housing unit occupied	165
Table H-B.3.	Rented housing units by rent paid, type of owner and, for privately-owned housing units, tenure of household	167
Table H-B.4.	Rented housing units by rent paid, type of owner, and number of rooms	168
Table H-B.5.	Rented housing units by rent paid, tenure of household, and number of rooms	169
Table H-B.6.	Housing units by location and period of construction	171
Table H-B.7.	Housing units by type, period of construction, and type of owner	173
Table H-B.8.	Housing units by tenure of household, type of housing unit, and number of rooms	174
Table H-B.9.	Housing units by number of rooms, availability of kitchen, and number of bedrooms	175
Table H-B.10.	Housing units by type, total area, and number of rooms	177
Table H-B.11.	Housing units by period of construction, number of stories of the building in which the housing unit is situated, and number of rooms	178
Table H-B.12.	Housing units by type, number of conjugal family nuclei, and number of rooms	179
Table H-B.13.	Housing units by type, number of occupants, and number of rooms	180
Table H-B.14.	Housing units by type, number of occupants, and number of bedrooms	181

C. Tables on some construction aspects of the living quarters

Table H-C.1.	Housing units by construction material of exterior walls, roofing material, and type of housing unit	182
Table H-C.2.	Housing units by construction material of exterior walls, roofing material, and period of construction	183

Table H-C.3.	Households and population occupying housing units by quality of construction of the housing unit, type of housing unit, and period of construction of the housing unit	184
Table H-C.4.	Households and population occupying housing units by quality of construction of the housing unit, type of owner of the housing unit, and period of construction of the housing unit	186
Table H-C.5.	Households and population occupying housing units by tenure of household and quality of construction of the housing unit	188
Table H-C.6.	Housing units by construction material of exterior walls, roofing material, and quality of construction of the housing unit	189

D. Tables dealing with sanitary facilities of the living quarters

Table H-D.1.	Housing units by number of bathrooms / number of toilets, type of housing unit, and period of construction of the housing unit	190
Table H-D.2.	Housing units by number of toilets, type of toilet waste disposal, and period of construction of the housing unit	192
Table H-D.3.	Housing units by region, availability of rain water tank or well, and period of construction	193
Table H-D.4.	Housing units by location and water usage	194

E. Tables dealing with car ownership of occupants of the living quarters

Table H-E.1.	Number of automobiles by location of the living quarters to which they belong	196
Table H-E.2.	Housing units by number of automobiles and location of the housing unit	198
Table H-E.3.	Households in housing units in possession of at least one automobile by place of residence and by availability of parking space on the premises	200

F. Tables dealing with goods, facilities and inconveniences around the living quarters

Table H-F.1.	Housing units by location and availability connections	202
Table H-F.2.	Housing units by location and inconveniences in the neighborhood of the living quarter	204
Table H-F.3.	Housing units by location and availability of commodities	206

Glossary

Activity status classifies the population into those economically active and not economically active. Activity status is the current or usual relationship of each person to economic activity during the week preceding the census. Data on activity status is restricted to persons 14 years of age and over.

Arubans are persons born in Aruba and who have the Dutch nationality.

Children ever born refers to the total number of live-born children a woman has had from the onset of her reproductive life span up to the time of the census. Only children who were alive at the moment of birth are counted.

Collective household: a collective household is defined as a household of more than ten persons without any family relation to each other.

Collective living quarters: structural and independent places of abode, intended for habitation by collective households. Collective living quarters usually have certain common facilities, such as cooking and toilet installations, baths, lounge rooms, or dormitories.

Composite household consisting of persons not all related to each other.

Consensual Bonds: de facto union without any formal marriage bond.

Consensual family nucleus: a couple, not married to each other, with or without children (never married child(ren) and not living together with a partner), and living together on a durable basis.

De jure population refers to the total of all usual residents.

De facto population refers to the total of all persons present at a certain time.

Divorced refers to the situation where the marriage has been terminated through a legal verdict.

Duration of settlement: the duration of settlement is the interval of time between the date of the census and the date the person arrived on the island. The duration of time is expressed in completed years; one year thus means, between one and two years on the island.

Economically active population comprises all persons of either sex who furnish the supply of labor for the production of economic goods and services during the week preceding the census. It includes both economically active persons in the civilian labor force and those serving in the armed forces. The civilian labor force encompasses both persons 'employed' and 'unemployed'.

Employed population comprises all persons (irrespective of their status as employer, employee, etc), including unpaid family workers, 14 years of age and over, who worked during the week preceding the census or who had a job in which they had already worked but from which they were temporarily absent because of illness or injury, industrial dispute, vacation or other leave of absence, absence without leave, or temporary disorganization of work, owing to bad weather, mechanical breakdowns or the like.

Employee is a person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece-rates, or pay in kind. A distinction is made between 'Employee with a permanent job' and 'Employee with a temporary job'. 'Employees with a permanent job' consist of those persons who, by written or verbal contract, have been hired for a period of six months or longer. 'Employees with a temporary job' include those employees who are hired for less than six months, with or without a contract. A person, who is doing odd jobs for several days at a time, is also classified under this category.

Employer is a person who, as an owner, directs a business and employs three or more persons. It should be clear that a household is not a business. A housewife who has three housemaids is not an employer. The director of a foundation, an incorporated business, or government organization is also not an employer.

Extended household: consisting of persons related to each other, but not comprising a nuclear household.

Foreign-born population: the persons born outside of Aruba.

Good: the element is in good condition.

Handicapped persons: persons with a physical or a mental disorder. The handicap is formed by the limitations of the personal abilities due to the disorder. Handicapped persons do not include individuals who are recovering from an illness or an accident and who will be cured within a limited period. Their perspective is, after all, to be completely healed.

Homeless household: a homeless household is defined as a household without shelter that would fall within the scope of living quarters.

Household Persons belonging to the same household use a common room and they share their meals. In this respect, we must note that a live-in housemaid sometimes belongs to the household where she works and sometimes not. It all depends on whether or not the housemaid has her own quarters where she lives, separately and almost independently, after her daily work.

Housing unit: a separate and independent place of abode, used by only one non-collective household. This includes structures of various levels of permanence and quality.

Income: in the population census, 'income' refers to gross income in the month preceding the census. All data on income are presented in Aruban florins. The Aruban florin is pegged to the US dollar at an exchange rate of 1.79 Afl. per 1 US\$. The income includes salaries and wages from employment, profits from businesses, pension, welfare, alimony, etc.

ISCED: the International Standard Classification of Education (ISCED) is an instrument for presenting statistics on education. ISCED is basically a three-stage classification system, providing successive subdivisions from level of education to field of study to program group. The ISCED level of program which was used in several tables incorporates seven categories. A residual category for education not definable by level is added.

Level 0: education preceding the first level usually begins at age 3, 4 or 5 (sometimes earlier) and lasts from one to three years. School types that fall under this level are: crèche, day nursery, playschool, and kindergarten.

Level 1: education at the first level usually begins at age 5, 6, or 7 and lasts for about five or six years. School types at this level are primary school and special primary schools.

Level 2: education at the second level, first stage begins at about age 11 or 12 and lasts for about three years. For instance: general programs such as MAVO, HAVO 1-3, VWO 1-3; lower levels of vocational training (EPB, LHNO, AHS-lbo, AHS-llw).

Level 3: education at the second level, second stage begins at age 14 or 15 and lasts for about three years. At this level we find general programs (HAVO 45, VWO 46) and vocational schooling, intermediate level, such as EPI 1-2, MHNO 1-2, MAO 1-2, Associate degree AHS 1-2, Police school, MOVAA 1-2, and nursing program (first two years).

Level 5: education at the third level, first stage, of the type that leads to an award not equivalent to a first university degree begins at age 17 or 18 and lasts for about three years. Thus, at about ages 20 or 21, the students who have progressed through the regular school system to complete these programs are usually ready to enter employment. Programs included are vocational education, intermediate level, final year(s) of e.g., EPI, MHNO, MAO, AHS (Associate degree), MOVAA, and nursing program (final year).

Level 6: education at the third level, first stage, of the type that leads to a first university degree or equivalent also begins at age 17 or 18 and lasts for about four years. Thus, students who have progressed through the school system to complete their first degree are usually ready for employment or for postgraduate study at about age 21 or 22. It includes programs leading to the usual first degrees such as Bachelor of Arts, Bachelor of Science, 'kandidaatsdiploma', 'HBO-diploma'.

Level 7: education at the third level, second stage, of the type that leads to a postgraduate university degree or equivalent includes all education beyond level 6. The degrees and awards obtained in this level take various forms and have different titles from country to country, some of them being Master of Arts, Master of Science, diplôme d'étude supérieure, doctorates of various kinds.

Level 9: education not definable by level. The content of this category can only be described in a negative sense, i.e. programs that cannot be fitted into any of the other categories.

ISCO: a systematic classification structure that encompasses all occupations of the economically active population. Occupation refers to the kind of work done, during the week preceding the census, by the person employed (or the type of work done previously, if unemployed). The classification structure consists of four levels: major groups, sub-major groups, minor groups, and unit groups. The following briefly outlines the ISCO-88 major groups and is meant to facilitate the interpretation of the classification.

1. Legislators, senior officials, and managers: this major group consists of occupations in which policy-making and high-level management play a primary role. These functions can be executed in the private and in the public sector. Managers at a lower level do not belong to this category.

2. Professionals: this major group includes occupations whose main tasks require a high level of professional knowledge and experience in the fields of physical and life sciences, or social sciences and humanities. The tasks of the members of this group consist of increasing the knowledge and experience, applying scientific concepts and theories to the solution of problems, and teaching the foregoing in a systematic manner.

3. Technicians and associated professionals: this major group requires technical knowledge and experience in one or more fields of physical and life sciences, or social sciences and humanities. The main tasks consist of carrying out technical work connected with the applications of concepts and operational methods in the above-mentioned fields, and in teaching at certain educational levels.

4. Clerks: occupations with main tasks consisting of secretarial duties, operating word processors and other office machines, recording and computing numerical data, and performing a number of customer-oriented clerical duties, mostly in connection with mail services, money -handling operations, and appointments.

5. Service workers and shop and market sales workers: this major group consists of occupations with main tasks consisting of providing services related to travel, house-keeping, catering, personal care, protection of individuals and property, and to maintain law and order, or selling goods in shops or on the market.

6. Skilled agricultural and fishery workers: the main responsibilities of this group consist of growing crops, breeding or hunting animals, catching or cultivating fish, conserving and exploiting forests and, especially in the case of market-oriented agricultural and fishery workers, selling products to purchasers, marketing organizations, or at markets.

7. Craft and related trade workers: the main tasks of these occupations consist of extracting raw materials, constructing buildings and other structures, and making various products as well as handicraft goods.

8. Plant and machine operators and assemblers: the occupations within this major group are involved in operating and monitoring mining, processing, and production machinery and equipment, as well as driving vehicles and operating mobile plants, or assembling products from component parts. These occupations require the knowledge and the experience to operate this machinery.

9. Elementary occupations: this major group covers occupations that require the knowledge and experience to perform mostly simple and routine tasks involving the use of hand-held tools and, in some cases, considerable physical effort. Only in a few cases do these occupations require personal initiative and judgment. The main tasks consist of selling goods in the street, door keeping and property watching, as well as cleaning, washing, and pressing, and working as laborers in the fields of mining, agriculture and fishing, construction and manufacturing.

10. Armed forces: members of the armed forces are those personnel who are currently serving in the armed forces, including auxiliary services, whether on a voluntary or compulsory basis, and who are not free to accept civilian employment. It includes conscripts enrolled for military training or other services for a specified period.

ISIC: to classify the economic activities of businesses and other economically active organizations. The hierarchy in the classifications of the branch of industry is made up of divisions (2-digit codes), major groups (3-digit codes), and groups (4-digit codes). For analytical purposes, the divisions are grouped in 17 tabulation categories. A number indicates each of the categories.

1. Agriculture, hunting and forestry
2. Fishing
3. Mining and quarrying
4. Manufacturing
5. Electricity, gas and water supply
6. Construction
7. Wholesale and retail trade; repair of motor vehicles and motorcycles and personal and household goods
8. Hotels and restaurants
9. Transport, storage and communication
10. Financial intermediation
11. Real estate activities
12. Public administration and defense; compulsory social security
13. Education
14. Health and social work
15. Other community, social and personal service activities
16. Private households with employed persons
17. Extraterritorial organizations and bodies

Language: the data on language collected during the census refer to a) language proficiency of members of the household and b) the language most often spoken by the individual in his or her household.

Legally separated: according to the Civil Code (art.154, par.1) married persons are compelled to live together. If, for one reason or the other, the couple may no longer be able to live together, they can request the court of law for either a formal divorce, or a legal separation. By a legal separation, the spouses are exempted from their obligation to live together. However, the legal bond between the spouses remains unaltered.

Level of educational attainment: for those who were no longer following regular education, data was gathered on their highest educational attainment. The ISCED system was also used for the classification of this information.

Living quarters consist of a building (or part of a building), or any other construction, in which precisely one household resides.

Living together on a durable basis: consensual bond between two persons. These persons may or may not be married to each other.

Marital status: the legal status of the person.

Mental handicaps: disorders caused by a failure in intellectual development that results in social incompetence, and is considered to be the result of a defective central nervous system. The disorders have often originated around the time of birth. In some cases mental handicaps can originate as well from an accident or a disease. Mostly a distinction is made according to the degree of intellectual limitations: a) idiocy, b) imbecility, c) moronity. The distinction between idiocy and imbecility is often quite vague. Therefore, in the population census these two groups were combined.

Moderate mental handicap: the mentally retarded person can function moderately independently.

Native population: the persons born on Aruba.

Non-Aruban population: are persons who are not born in Aruba.

Non-Collective household: a) one person household; b) nuclear household; c) extended household; d) composite household.

Not economically active includes homemakers, students, income recipients and others.

Nuclear household: defined as a household consisting entirely of a single conjugal family nucleus.

Own account worker/small employer is an independent, economically active person who gives employment to less than three persons. A carpenter, for instance, who works on his own without any employees, is a 'small employer/own account worker'.

Person-hours worked is the sum of all the hours worked by all the persons with certain characteristics. Suppose, for example, that for a certain age group and branch of industry, the total person-hours worked equals '5135'. This means that the persons who belong to the given category have worked, as a group, for a total of 5135 hours during the week preceding the census. The 'person-hours worked' is important for calculating, for instance, the average hours worked by persons, per age group, sex, and branch of industry.

Physical handicaps: persons with a physical handicap have either a motor, visual, auditory or organ handicap.

Place of residence: the place of residence is the geographical place where the enumerated person usually resides.

Poor: the element shows major deficiencies that cannot be repaired by maintenance.

Reference person: the reference person is the member of the household who is either the legal owner of the housing unit or the person responsible for paying the rent.

School-attending population consists of those persons who are following a regular education program. A regular program normally spans a period of more than one year and leads to an accredited diploma. The program can be followed during the day or in the evening hours. A regular program can normally be considered to be full-time education. A few examples of regular programs as they exist on Aruba are: primary school, MAVO, International School, VWO, IPA, EPB, EPI, University of Aruba, Police school, MOVAA. Various census data users are interested in information about kindergartens, playschools, and day nurseries. Therefore, children attending pre-primary schools were also considered to follow regular education.

Severe mental handicap: includes a) idiocy: i.e. a very deep, mental handicap. The disabled person leads a very passive, sometimes vegetating life. And b) imbecility: i.e. a very serious mental disorder. Independent functioning is impossible for the handicapped person.

Sociological family nucleus consists of both legally married persons (with or without children) as well as persons who are living together on a durable basis, without being married to each other (again with or without children).

Status in employment refers to the status of an economically active person with respect to his or her employment. Considered is whether the person is employed as an employer, own account worker/small employer, an employee with a permanent job, an employee with a temporary job, an unpaid family worker, or employed in another way.

Sufficient: the element shows small deficiencies that cannot be repaired by normal maintenance.

Tenure of household

1) Owner-occupant: one of the members of the household is the owner of the living quarters. If a person obtained a house through mortgage or hire purchase, he is considered in the census to be the owner of the house. If the housing unit is owned by one of the members of the household, it was further examined whether the housing unit was on:

(a) Property ground: i.e. the owner of the living quarters is also the owner of the terrain on which the living quarters are built.

(b) Leased ground: i.e. the terrain on which the living quarters are built is leased by the owner of the living quarters from the government for a period of 60 years.

(c) Rented ground: i.e. the terrain on which the living quarters are built is hired from the government for, in principle, a period no longer than five years. Usually no buildings may be constructed on this type of terrain. However, in practice, a number of constructions have been built on rented grounds.

2) Tenant: the household rents the living quarters as the main tenant. For tenant households, a division was made between 'furnished' and 'unfurnished' living quarters.

3) Subtenant: the household rents part of the living quarters as a subtenant from another occupant who is the main tenant.

4) Other form: in some cases it is possible that persons occupy the living quarters under another form of tenure. For instance, a person, due to his position, can use an official residence free of charge. In other cases, a person may be given the use of a room or apartment as part of the material benefits of a job. For instance, a housemaid may be provided with free room and board as part of her remuneration.

Type of ownership refers to the type of proprietor of the living quarters where the household resides.

Unattached person is someone who does not form part of a family nucleus.

Unemployed population: all persons (irrespective of their status as employer, employee, etc), including unpaid family workers, 14 years of age and over, who were not working during the week preceding the census, but who were seeking work for pay or profit, including those who had never worked. Also included are persons who, during the week preceding the census, were not seeking work because of temporary illness, because they had made arrangements to start a new job subsequent to the time of reference, or because they were on temporary or indefinite lay-off without pay.

Unpaid family worker is usually a person who works without pay in an economic enterprise operated by a related person usually living in the same household.

Very poor: significant parts of the element show very serious deficiencies that cannot be repaired anymore, but have to be replaced.

Glossary

Activity status classifies the population into those economically active and not economically active. Activity status is the current or usual relationship of each person to economic activity during the week preceding the census. Data on activity status is restricted to persons 14 years of age and over.

Arubans are persons born in Aruba and who have the Dutch nationality.

Children ever born refers to the total number of live-born children a woman has had from the onset of her reproductive life span up to the time of the census. Only children who were alive at the moment of birth are counted.

Collective household: a collective household is defined as a household of more than ten persons without any family relation to each other.

Collective living quarters: structural and independent places of abode, intended for habitation by collective households. Collective living quarters usually have certain common facilities, such as cooking and toilet installations, baths, lounge rooms, or dormitories.

Composite household consisting of persons not all related to each other.

Consensual Bonds: de facto union without any formal marriage bond.

Consensual family nucleus: a couple, not married to each other, with or without children (never married child(ren) and not living together with a partner), and living together on a durable basis.

De jure population refers to the total of all usual residents.

De facto population refers to the total of all persons present at a certain time.

Divorced refers to the situation where the marriage has been terminated through a legal verdict.

Duration of settlement: the duration of settlement is the interval of time between the date of the census and the date the person arrived on the island. The duration of time is expressed in completed years; one year thus means, between one and two years on the island.

Economically active population comprises all persons of either sex who furnish the supply of labor for the production of economic goods and services during the week preceding the census. It includes both economically active persons in the civilian labor force and those serving in the armed forces. The civilian labor force encompasses both persons 'employed' and 'unemployed'.

Employed population comprises all persons (irrespective of their status as employer, employee, etc), including unpaid family workers, 14 years of age and over, who worked during the week preceding the census or who had a job in which they had already worked but from which they were temporarily absent because of illness or injury, industrial dispute, vacation or other leave of absence, absence without leave, or temporary disorganization of work, owing to bad weather, mechanical breakdowns or the like.

Employee is a person who works for a public or private employer and receives remuneration in wages, salary, commission, tips, piece-rates, or pay in kind. A distinction is made between 'Employee with a permanent job' and 'Employee with a temporary job'. 'Employees with a permanent job' consist of those persons who, by written or verbal contract, have been hired for a period of six months or longer. 'Employees with a temporary job' include those employees who are hired for less than six months, with or without a contract. A person, who is doing odd jobs for several days at a time, is also classified under this category.

Employer is a person who, as an owner, directs a business and employs three or more persons. It should be clear that a household is not a business. A housewife who has three housemaids is not an employer. The director of a foundation, an incorporated business, or government organization is also not an employer.

Extended household: consisting of persons related to each other, but not comprising a nuclear household.

Foreign-born population: the persons born outside of Aruba.

Good: the element is in good condition.

Handicapped persons: persons with a physical or a mental disorder. The handicap is formed by the limitations of the personal abilities due to the disorder. Handicapped persons do not include individuals who are recovering from an illness or an accident and who will be cured within a limited period. Their perspective is, after all, to be completely healed.

Homeless household: a homeless household is defined as a household without shelter that would fall within the scope of living quarters.

Household Persons belonging to the same household use a common room and they share their meals. In this respect, we must note that a live-in housemaid sometimes belongs to the household where she works and sometimes not. It all depends on whether or not the housemaid has her own quarters where she lives, separately and almost independently, after her daily work.

Housing unit: a separate and independent place of abode, used by only one non-collective household. This includes structures of various levels of permanence and quality.

Income: in the population census, 'income' refers to gross income in the month preceding the census. All data on income are presented in Aruban florins. The Aruban florin is pegged to the US dollar at an exchange rate of 1.79 Afl. per 1 US\$. The income includes salaries and wages from employment, profits from businesses, pension, welfare, alimony, etc.

ISCED: the International Standard Classification of Education (ISCED) is an instrument for presenting statistics on education. ISCED is basically a three-stage classification system, providing successive subdivisions from level of education to field of study to program group. The ISCED level of program which was used in several tables incorporates seven categories. A residual category for education not definable by level is added.

Level 0: education preceding the first level usually begins at age 3, 4 or 5 (sometimes earlier) and lasts from one to three years. School types that fall under this level are: crèche, day nursery, playschool, and kindergarten.

Level 1: education at the first level usually begins at age 5, 6, or 7 and lasts for about five or six years. School types at this level are primary school and special primary schools.

Level 2: education at the second level, first stage begins at about age 11 or 12 and lasts for about three years. For instance: general programs such as MAVO, HAVO 1-3, VWO 1-3; lower levels of vocational training (EPB, LHNO, AHS-lbo, AHS-llw).

Level 3: education at the second level, second stage begins at age 14 or 15 and lasts for about three years. At this level we find general programs (HAVO 45, VWO 46) and vocational schooling, intermediate level, such as EPI 1-2, MHNO 1-2, MAO 1-2, Associate degree AHS 1-2, Police school, MOVAA 1-2, and nursing program (first two years).

Level 5: education at the third level, first stage, of the type that leads to an award not equivalent to a first university degree begins at age 17 or 18 and lasts for about three years. Thus, at about ages 20 or 21, the students who have progressed through the regular school system to complete these programs are usually ready to enter employment. Programs included are vocational education, intermediate level, final year(s) of e.g., EPI, MHNO, MAO, AHS (Associate degree), MOVAA, and nursing program (final year).

Level 6: education at the third level, first stage, of the type that leads to a first university degree or equivalent also begins at age 17 or 18 and lasts for about four years. Thus, students who have progressed through the school system to complete their first degree are usually ready for employment or for postgraduate study at about age 21 or 22. It includes programs leading to the usual first degrees such as Bachelor of Arts, Bachelor of Science, 'kandidaatsdiploma', 'HBO-diploma'.

Level 7: education at the third level, second stage, of the type that leads to a postgraduate university degree or equivalent includes all education beyond level 6. The degrees and awards obtained in this level take various forms and have different titles from country to country, some of them being Master of Arts, Master of Science, diplôme d'étude supérieure, doctorates of various kinds.

Level 9: education not definable by level. The content of this category can only be described in a negative sense, i.e. programs that cannot be fitted into any of the other categories.

ISCO: a systematic classification structure that encompasses all occupations of the economically active population. Occupation refers to the kind of work done, during the week preceding the census, by the person employed (or the type of work done previously, if unemployed). The classification structure consists of four levels: major groups, sub-major groups, minor groups, and unit groups. The following briefly outlines the ISCO-88 major groups and is meant to facilitate the interpretation of the classification.

1. Legislators, senior officials, and managers: this major group consists of occupations in which policy-making and high-level management play a primary role. These functions can be executed in the private and in the public sector. Managers at a lower level do not belong to this category.

2. Professionals: this major group includes occupations whose main tasks require a high level of professional knowledge and experience in the fields of physical and life sciences, or social sciences and humanities. The tasks of the members of this group consist of increasing the knowledge and experience, applying scientific concepts and theories to the solution of problems, and teaching the foregoing in a systematic manner.

3. Technicians and associated professionals: this major group requires technical knowledge and experience in one or more fields of physical and life sciences, or social sciences and humanities. The main tasks consist of carrying out technical work connected with the applications of concepts and operational methods in the above-mentioned fields, and in teaching at certain educational levels.

4. Clerks: occupations with main tasks consisting of secretarial duties, operating word processors and other office machines, recording and computing numerical data, and performing a number of customer-oriented clerical duties, mostly in connection with mail services, money -handling operations, and appointments.

5. Service workers and shop and market sales workers: this major group consists of occupations with main tasks consisting of providing services related to travel, house-keeping, catering, personal care, protection of individuals and property, and to maintain law and order, or selling goods in shops or on the market.

6. Skilled agricultural and fishery workers: the main responsibilities of this group consist of growing crops, breeding or hunting animals, catching or cultivating fish, conserving and exploiting forests and, especially in the case of market-oriented agricultural and fishery workers, selling products to purchasers, marketing organizations, or at markets.

7. Craft and related trade workers: the main tasks of these occupations consist of extracting raw materials, constructing buildings and other structures, and making various products as well as handicraft goods.

8. Plant and machine operators and assemblers: the occupations within this major group are involved in operating and monitoring mining, processing, and production machinery and equipment, as well as driving vehicles and operating mobile plants, or assembling products from component parts. These occupations require the knowledge and the experience to operate this machinery.

9. Elementary occupations: this major group covers occupations that require the knowledge and experience to perform mostly simple and routine tasks involving the use of hand-held tools and, in some cases, considerable physical effort. Only in a few cases do these occupations require personal initiative and judgment. The main tasks consist of selling goods in the street, door keeping and property watching, as well as cleaning, washing, and pressing, and working as laborers in the fields of mining, agriculture and fishing, construction and manufacturing.

10. Armed forces: members of the armed forces are those personnel who are currently serving in the armed forces, including auxiliary services, whether on a voluntary or compulsory basis, and who are not free to accept civilian employment. It includes conscripts enrolled for military training or other services for a specified period.

ISIC: to classify the economic activities of businesses and other economically active organizations. The hierarchy in the classifications of the branch of industry is made up of divisions (2-digit codes), major groups (3-digit codes), and groups (4-digit codes). For analytical purposes, the divisions are grouped in 17 tabulation categories. A number indicates each of the categories.

1. Agriculture, hunting and forestry
2. Fishing
3. Mining and quarrying
4. Manufacturing
5. Electricity, gas and water supply
6. Construction
7. Wholesale and retail trade; repair of motor vehicles and motorcycles and personal and household goods
8. Hotels and restaurants
9. Transport, storage and communication
10. Financial intermediation
11. Real estate activities
12. Public administration and defense; compulsory social security
13. Education
14. Health and social work
15. Other community, social and personal service activities
16. Private households with employed persons
17. Extraterritorial organizations and bodies

Language: the data on language collected during the census refer to a) language proficiency of members of the household and b) the language most often spoken by the individual in his or her household.

Legally separated: according to the Civil Code (art.154, par.1) married persons are compelled to live together. If, for one reason or the other, the couple may no longer be able to live together, they can request the court of law for either a formal divorce, or a legal separation. By a legal separation, the spouses are exempted from their obligation to live together. However, the legal bond between the spouses remains unaltered.

Level of educational attainment: for those who were no longer following regular education, data was gathered on their highest educational attainment. The ISCED system was also used for the classification of this information.

Living quarters consist of a building (or part of a building), or any other construction, in which precisely one household resides.

Living together on a durable basis: consensual bond between two persons. These persons may or may not be married to each other.

Marital status: the legal status of the person.

Mental handicaps: disorders caused by a failure in intellectual development that results in social incompetence, and is considered to be the result of a defective central nervous system. The disorders have often originated around the time of birth. In some cases mental handicaps can originate as well from an accident or a disease. Mostly a distinction is made according to the degree of intellectual limitations: a) idiocy, b) imbecility, c) moronity. The distinction between idiocy and imbecility is often quite vague. Therefore, in the population census these two groups were combined.

Moderate mental handicap: the mentally retarded person can function moderately independently.

Native population: the persons born on Aruba.

Non-Aruban population: are persons who are not born in Aruba.

Non-Collective household: a) one person household; b) nuclear household; c) extended household; d) composite household.

Not economically active includes homemakers, students, income recipients and others.

Nuclear household: defined as a household consisting entirely of a single conjugal family nucleus.

Own account worker/small employer is an independent, economically active person who gives employment to less than three persons. A carpenter, for instance, who works on his own without any employees, is a 'small employer/own account worker'.

Person-hours worked is the sum of all the hours worked by all the persons with certain characteristics. Suppose, for example, that for a certain age group and branch of industry, the total person-hours worked equals '5135'. This means that the persons who belong to the given category have worked, as a group, for a total of 5135 hours during the week preceding the census. The 'person-hours worked' is important for calculating, for instance, the average hours worked by persons, per age group, sex, and branch of industry.

Physical handicaps: persons with a physical handicap have either a motor, visual, auditory or organ handicap.

Place of residence: the place of residence is the geographical place where the enumerated person usually resides.

Poor: the element shows major deficiencies that cannot be repaired by maintenance.

Reference person: the reference person is the member of the household who is either the legal owner of the housing unit or the person responsible for paying the rent.

School-attending population consists of those persons who are following a regular education program. A regular program normally spans a period of more than one year and leads to an accredited diploma. The program can be followed during the day or in the evening hours. A regular program can normally be considered to be full-time education. A few examples of regular programs as they exist on Aruba are: primary school, MAVO, International School, VWO, IPA, EPB, EPI, University of Aruba, Police school, MOVAA. Various census data users are interested in information about kindergartens, playschools, and day nurseries. Therefore, children attending pre-primary schools were also considered to follow regular education.

Severe mental handicap: includes a) idiocy: i.e. a very deep, mental handicap. The disabled person leads a very passive, sometimes vegetating life. And b) imbecility: i.e. a very serious mental disorder. Independent functioning is impossible for the handicapped person.

Sociological family nucleus consists of both legally married persons (with or without children) as well as persons who are living together on a durable basis, without being married to each other (again with or without children).

Status in employment refers to the status of an economically active person with respect to his or her employment. Considered is whether the person is employed as an employer, own account worker/small employer, an employee with a permanent job, an employee with a temporary job, an unpaid family worker, or employed in another way.

Sufficient: the element shows small deficiencies that cannot be repaired by normal maintenance.

Tenure of household

1) Owner-occupant: one of the members of the household is the owner of the living quarters. If a person obtained a house through mortgage or hire purchase, he is considered in the census to be the owner of the house. If the housing unit is owned by one of the members of the household, it was further examined whether the housing unit was on:

(a) Property ground: i.e. the owner of the living quarters is also the owner of the terrain on which the living quarters are built.

(b) Leased ground: i.e. the terrain on which the living quarters are built is leased by the owner of the living quarters from the government for a period of 60 years.

(c) Rented ground: i.e. the terrain on which the living quarters are built is hired from the government for, in principle, a period no longer than five years. Usually no buildings may be constructed on this type of terrain. However, in practice, a number of constructions have been built on rented grounds.

2) Tenant: the household rents the living quarters as the main tenant. For tenant households, a division was made between 'furnished' and 'unfurnished' living quarters.

3) Subtenant: the household rents part of the living quarters as a subtenant from another occupant who is the main tenant.

4) Other form: in some cases it is possible that persons occupy the living quarters under another form of tenure. For instance, a person, due to his position, can use an official residence free of charge. In other cases, a person may be given the use of a room or apartment as part of the material benefits of a job. For instance, a housemaid may be provided with free room and board as part of her remuneration.

Type of ownership refers to the type of proprietor of the living quarters where the household resides.

Unattached person is someone who does not form part of a family nucleus.

Unemployed population: all persons (irrespective of their status as employer, employee, etc), including unpaid family workers, 14 years of age and over, who were not working during the week preceding the census, but who were seeking work for pay or profit, including those who had never worked. Also included are persons who, during the week preceding the census, were not seeking work because of temporary illness, because they had made arrangements to start a new job subsequent to the time of reference, or because they were on temporary or indefinite lay-off without pay.

Unpaid family worker is usually a person who works without pay in an economic enterprise operated by a related person usually living in the same household.

Very poor: significant parts of the element show very serious deficiencies that cannot be repaired anymore, but have to be replaced.
