## Population growth

As of the end of 2006 the population totaled 103,484 persons. Of which 47.7 percent was men and 52.3 was women. 20.7 percent of the population was younger than 15 years of age, 8.8 percent was 65 years or older and 70.5 percent was in the working age category ( $15-64$ yrs.). The number of children under age 5 decreased with 9.32 percent since 2000. The group of persons 65 years and older on the other hand increased with 34.7 percent since 2000.

Figure 2 Live births by age of mother in percentage of total births, 2003-2006

## Deaths

In 2006 there were slightly more deaths registered than the last three years. A total of 535 deaths were registered of which 77.6 percent was older than 60 years of age. Worth mentioning is the increasing number of babies dying before their first birthday.

## Live Births

In 2006 1,222 babies were registered at the Population Registry Office. During the last five years the number of babies born to women aged 29 years or younger is increasing. The number of babies who were born to mothers aged $30-39$ on the other hand, is decreasing. The number of babies born to teenage mothers is 12.7 percent of all registered births in 2006, compared to 9.7 percent in 2003.

## Domiciliation

The number of persons who registered at the Population Registry Office during 2006 show a dramatic decrease. This may be in part explained by the effect of the administrative stop and re-organization of the DIMAS. The very small number of 'locals' registering will need further analysis. In total 2,364 persons registered at the registry. That is 35.8 percent less than the average number of persons coming to Aruba during the last ten years.

## Departures

Unlike domiciliation, the number of persons de-registering increased, after a couple of years showing 'low' emigration rates. This increase however cannot be attributed to more foreign-born persons leaving, but more to the increasing number of 'locals' and Dutch nationals de-registering.

Figure 3 Domiciliation and departures 20022006

## Marriages and Divorces

The number of marriages for both 2005 and 2006 are preliminary, since the Population Registry Office is experiencing some technical problems with the extraction files. No detailed data is available for 2006.

In 2002 the crude divorce rate sky-rocketed to 5.5 per thousand compared to an average of an annual 3 per thousand. Since then the number of divorces remain high compared to the decreasing number of marriages in each year. Even so, in 2003 up to 2005 the crude divorce rate slowed down to being 4.3 per thousand in 2005. In 2006 however the number of divorces per thousand population increased again to 5.1 per thousand.
