PART I

BUSINESS CYCLE
INDICATORS

1.1 Highlights

Partial Economic Activity Index (PEAI)

Preliminary results indicate that economic activity in Aruba increased by 2.6 percent in the third quarter of 2010 compared to the third quarter of 2009, as measured by the Partial Economic Activity Index. With the exception of the Utilities industry, economic activity increases has been recorded for Construction, Trade, Hotels & restaurants, Transport, Housing and Public administration.

Economic activities in the Construction industry increased by 0.4 percent. This is mainly related to a growth in the import value of construction materials.

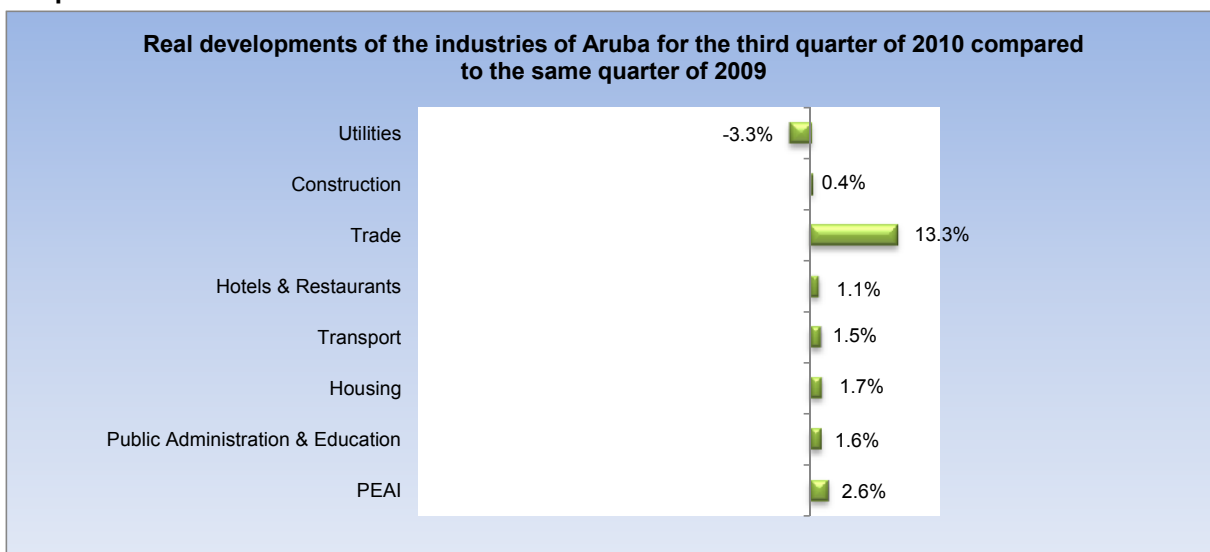

Economic activities in the Trade industry rose by an estimated 13.3 percent in the third quarter of 2010. Increases were recorded for the value of import of 'Non-specialized products', 'Pharmaceutical & medical goods', 'Hardware, glass & paint' and 'Specialized goods'.

Furthermore, economic activity increases has been recorded for Hotels & restaurants (+1.1%), Transport (+1.5%), Housing (+1.7%) and Public Administration (+1.6%).

Economic activities in the Utilities industry fell with 3.3 percent, mainly as a result of a decreases in the production and distribution of water. In addition, gas consumption recorded a drop in the third quarter of 2010.

Keep in mind that this is an approximation of the economy's tendency. The result of the seven closely examined industries are presented in Graph 1.2. The overall movement of economic activity in these seven industries make up the Partial Economic Activity Index (PEAI). For a better understanding of these findings we will further elaborate on the economy's structure and its development.

Graph 1.2

¹ The PEA I is measured in real terms.
 Note: Provisional figures.

The industries mentioned before are covered to illustrate a better assessment of the business cycle, as they contribute 68.7 percent to the GDP² of Aruba. Each industry is analyzed individually by using two kinds of graphs; a line chart reflecting the index of the industry, and a bar chart reflecting the changes of a quarter compared to the same quarter of the previous year, eliminating the seasonality aspect. The focus remains on the economy as a whole, using its fragments merely to achieve a perception of the business cycle.

Table 1.1.1 displays the indices derived from the available indicators. The first column in the table shows the PEAI, which is followed by the indices of the industries monitored. The percentage share of each industry in the GDP is noted in the first row as well. The information presented below has the year 2000 as base (2000=100) and is revealed on a quarterly basis.

Note to readers

For short-term indicators, the volume development is often based on a limited number of indicators which are thought to be representative for the volume growth of an industry. The weighting of the industries together, according to their share in the GDP, results in the Partial Economic Activity Index (PEAI). The PEA I describes, thus, the volume development of the industries involved. Seven out of ten main economic activities are described in this publication in particular: Utilities, Construction, Trade, Hotels & Restaurants, Transport, Storage & Communication, Housing and Public administration & Education. (For more detailed information on methodology we refer to the Economic Profile Procedure, which is available upon request at the Central Bureau of Statistics).

² The total money value of all final goods and services produced in an economy during a specified period. Index 2000=100

Table 1.1.2 represents the PEAI and its quarterly percentage changes in volume compared to the previous year. The PEAI has been showing a negative trend from the second quarter of 2008 up to the second quarter of 2010. In the third quarter of 2010, the PEAI increased by an estimated 2.6 percent compared to the third quarter of 2009, in contrast to a drop of 4.0 percent recorded during the similar period one year earlier. Normally the PEAI peaks in the fourth quarter of each year, but Graph 1.3 shows that the peak is reached in 2008 and 2009 during the first quarter.

¹ An index is a single numerical value that reflects the relative size of a variable in the period under review compared with its size in the base year.

* Provisional

1.2 Utilities

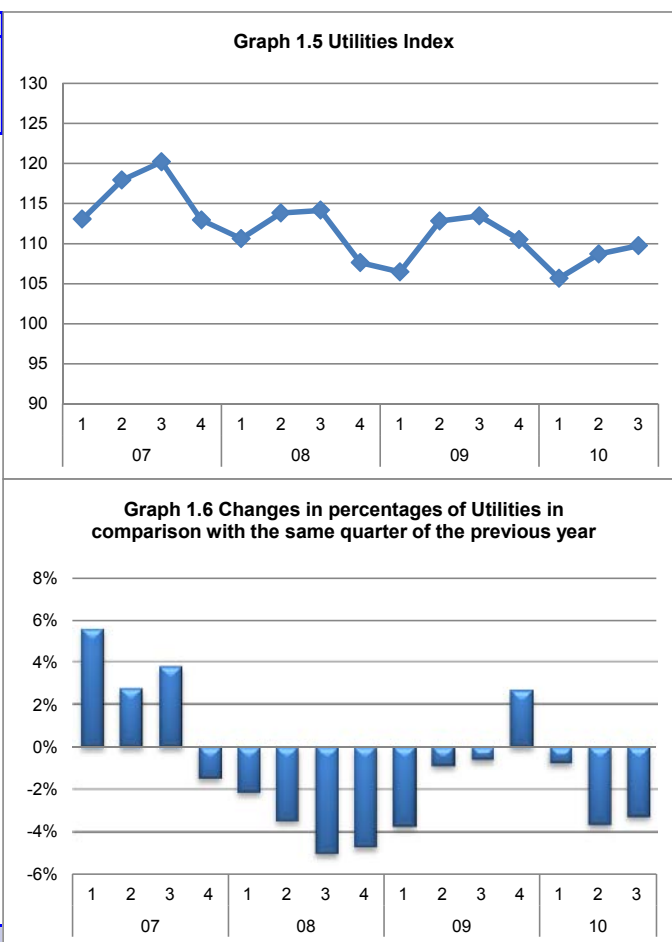

In the third quarter of 2010, economic activity in the *Utilities* industry declined by 3.3 percent compared to the similar quarter of 2009, following a drop of 0.6 percent in the similar period one year earlier. The total water delivery decreased by 8.5 percent in the third quarter of 2010, when compared to the third quarter of 2009. Average water usage by households and in the hotel sector dropped by 3.3 and 1.2 percent respectively, while water usage in the commercial and public sector rose by 1.6 and 3.1 percent respectively, when compared to the third quarter of 2009. The total production of gas by Arugas declined by 2.4 percent in the third quarter of 2010, when compared to the third quarter of 2009. Consumption of gas by households and the commercial sector fell with 6.3 and 0.2 percent respectively. On the other hand, electricity distribution increased by 3.0 percent in the third quarter of 2010.

In table 1.2 one can see that the utilities index usually peaks during the third quarters of each year.

1.3 Construction

Economic activity in the *Construction* industry expanded by 0.4 percent in the third quarter of 2010, ending a negative trend since 2006. The Construction index has been showing a downward trend since the third quarter of 2006 (see Table 1.3). The most notable increases were recorded for the imports of Salt, sulfur, ground, stone, plaster, etc. (+109.3%), Wood & wood goods (+31.2%), Ceramic, pottery & porcelain articles (+108.5%) and Paint, lacquer, varnish, filling, etc. (+27.0%). Value of import of cement, on the other hand, declined by 49.1 percent compared to the third quarter of 2009.

Note: Please be informed that the data is revised because of the processing of additional documents, as well as a newly harmonized system that was introduced at the beginning of 2009.

1.4 Trade

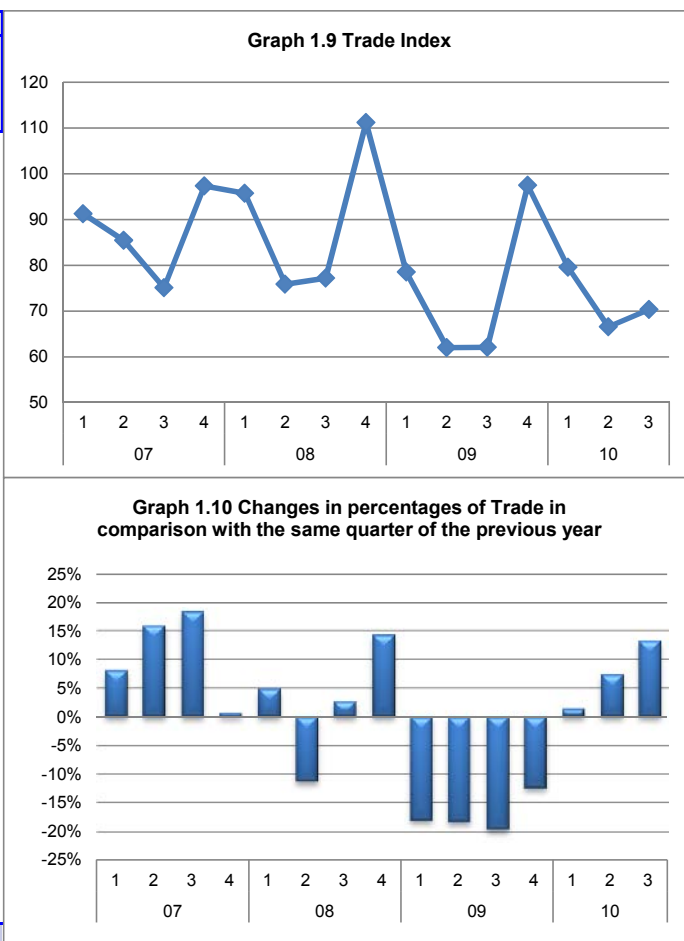

Heavily dependent on seasonal preferences, the *Trade* industry index normally peaks during the fourth quarters of each year (see Graph 1.9). This peak is mainly caused by an increase in the value of imports of goods during the holiday season. In Table 1.4 one can also notice that since 2008, lower level of imports are recorded during the second quarter each year. In the third quarter of 2010, economic activity in the Trade industry increased by an estimated 13.3 percent compared to the third quarter of 2009, mainly as a result of a growth in the import value of "Non-specialized products, mainly food, beverages & tobacco as in supermarkets, etc. (+18.2%), Pharmaceutical & medical goods (+9.3%), Hardware, glass & paint (+37.6%) and "All other retail sale in specialized goods" (+56.1%).

* Provisional

Retail and wholesale of non specialized goods as in supermarkets, minimarkets, etc.

In the third quarter of 2010, the value of imports of non-specialized products, mainly food, beverage & tobacco increased by 18.2 percent compared to the same quarter of 2009, after a 22.0 percent drop recorded during the similar period one year earlier.

Retail and wholesale of all other specialized goods

Compared to the third quarter of 2009, the import value of all other specialized goods grew by 56.1 percent in the third quarter of 2010, in contrast to a 37.8 percent drop recorded during the similar period one year earlier.

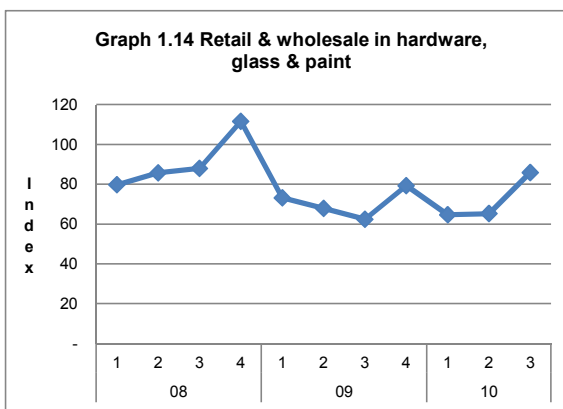

Retail and wholesale of pharmaceutical & medical goods

In third quarter of 2010, import value of pharmaceutical & medical goods increased by 9.3 percent compared to the third quarter of 2009, in contrast to a drop of 19.4 percent recorded during the similar period one year earlier.

Retail and wholesale in hardware, glass & paint

In the third quarter of 2010, the value of imports of hardware, glass & paint increased by 37.6 percent, in contrast to a 29.0 percent drop recorded in the corresponding period one year earlier.

Retail and wholesale of household appliances, articles and equipment

Import household appliances, articles & equipment fell with 37.3 percent compared to the third quarter of 2009, in contrast to a growth of 13.8 percent recorded during the similar period one year earlier.

Retail and wholesale of textiles, clothing, footwear & leather goods and books & office supplies

Value of import of textiles, clothing, footwear & leather goods, as well as books & office supplies, fell with 0.7 and 16.2 percent respectively, compared to the third quarter of 2009.

¹⁾ Mainly food, beverages and tobacco products as in supermarkets and minimarkets.

1.5 Hotels & Restaurants

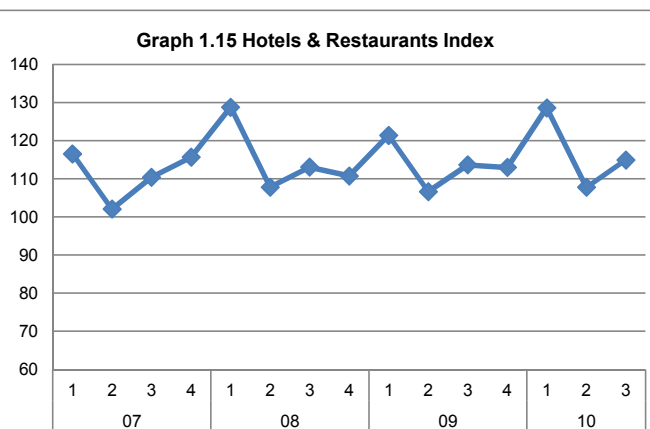

In the third quarter of 2010, the economic activity in the *Hotels & Restaurants* industry increased by an estimated 1.1 percent compared to the third quarter of 2009, following a growth 0.5 percent recorded in the similar period one year earlier. The Hotel & restaurant industry has been showing a positive trend since the third quarter of 2009. The total visitor nights during the third quarter of 2010 increased by 3.3 percent compared to the third quarter of 2009. In Graph 1.15 one can observe the index movement evolving from the first quarter of 2006 up to the second quarter of 2010.

1.6 Transport

In the third quarter of 2010, economic activity in the *Transport* industry increased by 1.5 percent compared to the third quarter of 2009, following a growth 3.9 percent recorded during the similar period one year earlier. This is mainly caused by increases in commercial landings (+5.7%), visitor nights (+3.3%), public transportation (+1.2%) and the port traffic in absolute numbers (+4.4%). On the other hand, the contents of vessels (in BRT) entering the ports of Aruba decreased by 26.1 percent in the third quarter of 2010, when compared to the similar quarter of 2009.

1.7 Housing

In the third quarter of 2010, the economic activity in the *Housing* industry increased by 1.7 percent compared to the third quarter of 2009, following a growth of 2.2 percent recorded during the similar period one year earlier. This growth is directly related to the number of premises connected to the WEB1, which at the end of September 2010 rose with 638 connections compared to the similar period of 2009. One can notice that the *Housing* index kept on growing in a very steady manner.

1.8 Public administration & Education

In third quarter of 2010, economic activity in the *Public administration & Education* industry increased by an estimated 1.6 percent compared to the third quarter of 2009, following a growth of 11.7 percent recorded during the similar period one year earlier. The main cause of this increase can be attributed to a higher wage compensations and appropriations in the public sector combined with a lower level of inflation in the third quarter of 2010, when compared to the similar period of 2009.

Methodology

Data are collected from DPO, SVB, Serlimar and Post Aruba. It regards salaries, allowances, compensations and appropriations of the public servants. This compiled data is then corrected with the inflation during the concerning period. Since January 2006, Serlimar and Post Aruba are transferred from public or government ownership to private enterprises. Since August 2007, there are no public servants (status) employed at Post Office Aruba N.V.

Graph 1.22 Public administration & Education Index

Graph 1.23 Changes in percentages of Public administration & Education in comparison with the same quarter of the previous year

2.1 Consumer Prices

Note to readers

The Central Bureau of Statistics (CBS) has recently made a series of improvements to keep the measures on changes in consumer prices as accurate and up to date as possible. Effective January 1, 2009, the following important changes in the calculation of the CPI have been implemented. Subsequently, the CPI's for 2007 and 2008 have been revised. For comparison reasons, CBS has decided to change from a national classification system to COICOP, which is an internationally agreed classification system for consumer expenditure and prices. The first level of classification in COICOP consists of 12 divisions covering total consumption expenditures of households. As previously noted, the breakdown into divisions is essentially by purpose. At the second level of disaggregation, the 12 divisions are divided into 47 groups of products, which are in turn divided into 114 classes of products at the third level. These 114 classes are divided in 452 elementary aggregates. As of January 2007, the expenditure weights will be based on the Household Expenditure Survey held by CBS during the months of April and May of 2006.

Tables 2.1 & 2.2 show the quarterly percentage changes in prices from 2007 to 2010.

Graph 2.1 Yearly Consumer Price Changes

In the fourth quarter of 2010, consumer prices decreased by 0.1 percent compared to the previous quarter. On a yearly basis, average consumer prices fell with 0.7 percent in 2010, when compared to 2009. The main decreases were recorded for Clothing & footwear (-7.7%), Household operation (-2.2%), Restaurants & hotels (-2.1%), Transport (-2.0%), Recreation & culture (-1.7%), Miscellaneous goods & services (-1.5%), Health (-0.7%) and Alcoholic beverages & tobacco (-0.6%). On the other hand, prices increases were registered for Housing (+2.0%), Education (+2.0%), Communications (+0.5%) and Food & non-alcoholic beverages (+0.1%).

3.1 Tourism

Tourism has an impact on most of the economic activities on the island, which is why we rely on tourism for our prosperity. The beautiful beaches, weather and peaceful ambience are our important natural resources. To monitor this economic mainstay, we have to observe a variety of relevant events, from the supply as well as the demand side. This is done through various means, including administrative sources from various relevant institutions, Tourist surveys that are conducted on a monthly basis and reported on a quarterly basis. The reason different means are utilized for Tourism is that it cannot be reflected in any one single economic activity, but consists of various activities and products. Accordingly and because of its significant impact on the economy, a separate chapter is presented here, which is dedicated solely to Tourism.

3.2 The Supply Side

The supply side of Tourism will initially be observed through the number of rooms available from year 2003 up to the second quarter of 2010. Table 3.1 shows the room supply and the occupied room nights throughout the period of 2003 up to the second quarter of 2010. The information is illustrated per quarter, but it should be noted that the quarterly information is not based on factual data. It is based on an assumed distribution of projected yearly additions.

Table 3.1 Hotel Room Supply & Occupied room nights

Year	Q.	Estimated Distribution	Actual rooms Added/ Deducted to Market	Available Room Nights	Occupied Room Nights

3.3 The Demand Side

Note to readers

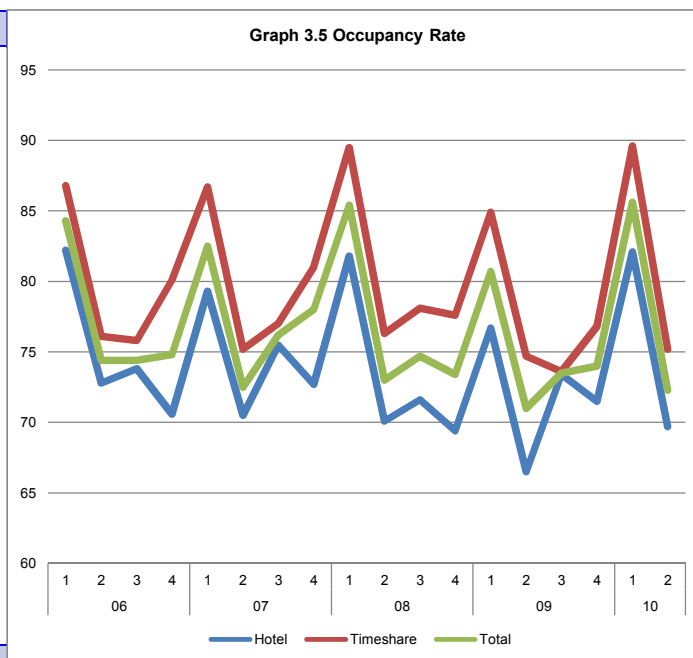

To study the demand side we will first look at data from the hotel industry, mainly the Occupancy Rate from 2003 up to the second quarter of 2010. This will then be compared to the Total Visitors and Total Visitor Nights for that period. Graph 3.5 shows the Occupancy Rate per quarter during 2006 till 2010. The Occupancy Rate reflects the percentage of occupancy of the total available rooms in a relevant period of time. In this case, the rate is determined for each quarter of the reported years.

Table 3.5 Occupancy Rate

Year	Q.	Hotel	Timeshare	Total
2003	1	74.8	79.1	76.4
	2	64.7	70.6	66.9

Graph 3.15 Share of tourism expenditure by major markets during the fourth quarter of 2009

Note to readers

In order to determine the estimated total expenditure made by the visitors, the average daily expenditure is multiplied by the number of stayover visitors and by their average length of stay. In addition, an estimate is made for the accommodation part of a pre-paid package and added to the formula. The estimated total expenditure excludes any other part of pre-paid packages.

Graph 3.16 Estimated total tourism expenditure

Graph 3.17 Changes in percentages of a quarter compared to the same quarter of the previous year

According to the survey the total amount of money spent by visitors had shown a negative pattern from the fourth quarter of 2008 up to the third quarter of 2009, when compared to the similar quarter of the previous year. In the fourth quarter of 2009, the total estimated tourism expenditures showed a positive recovery when compared to the similar quarter of 2008. The estimated total tourism expenditure since the fourth quarter of 2009 is not yet available.

In the third quarter of 2010, the lodging tax revenue increased by 21.9 percent compared to the third quarter of 2009, in contrast to a drop of 4.0 percent recorded in the similar period one year earlier. The casino tax revenue declined by 12.1 percent compared to the third quarter of 2009, following a 5.8 percent drop in the corresponding period one year earlier.

CHAPTER 4 Foreign Trade in Merchandise

4.1 Total import

In the third quarter of 2010, total value of import to Aruba decreased by 21.4 percent compared to the third quarter of 2009, reaching a total value of approximately Afl. 417 million. This drop is mainly caused by a decline in the regular import of goods to Aruba (-20.9%) and the value of import of goods to the Freezone of Aruba (-27.6%). See Table 4.2 and Table 4.3.

Table 4.4 shows the import by major markets. In the third quarter of 2010, the total regular imports dropped by 20.9 percent compared to the third quarter of 2009. With the exception of the Central American market (+4.6%), Caribbean (+1.4%) and the Rest of the World (+3.3%), a decline in import has been recorded for the North American market (-3.8%), the South American market (-6.6%) and the European market (-54.7%). Approximately 55.3 percent of the total value of imported commodities to Aruba comes from the North American market, and in particular from the USA.

Graph 4.7 Market share of import to Aruba by major market during the third quarter of 2010

The following table shows the storage by major markets. Compared to the third quarter 2009, import value of goods to the Freezone Aruba contracted by 27.6 percent, mainly as a result of decreases in the import from South America (-48.4%), Europe (-9.0%), Central America (-37.4%) and North America (-31.9%). In the third quarter of 2010, the market share of Europe increased from 51.8% to 65.2%, while the South American market declined from 44.3% to 31.6%.

4.2 Total export

In the third quarter of 2010, the total value of exports from Aruba fell with 32.1 percent compared to the third quarter of 2009, in contrast to a growth of 43.2 percent recorded in the comparable period one year earlier. This drop during the third quarter of 2010 is caused by decreases in the value of goods in transit (-36.4%) and regular export of merchandise (-14.8%). See table 4.9 and 4.10.

Market share of regular export to Aruba by major market during the third quarter of 2010

Table 4.12 shows the value of goods transit by major markets. Compared to the third quarter of 2009, value of goods in transit declined by 36.4 percent in the third quarter of 2010. With the exception of the Rest of the World (+337.2%), export decreases has been recorded for the Caribbean (-69.6%), Central America (-18.5%), Europe (-45.4%) and South America (-2.2%).

Market share of value of export in transit from Aruba by major market during the third quarter of 2010

5.1 Enterprises

The statistics presented in this chapter covers business and labor information of Aruba, as seen from the demand side. The main purpose of enterprise statistics is to show how enterprises are doing in Aruba. Enterprises in Aruba cover all incorporated and unincorporated enterprises, which are economically active, and that have at least one employee on their payroll. Civil servants, unincorporated enterprises with no employees, private households with employed persons and incorporated enterprises with no employees are excluded from this definition. Enterprises are classified according to the main activity, size and region of workplace. This information is based on quarterly data as collected by the Social Security Bank. This data is submitted to the CBS.

Table 5.1 illustrates the number of companies. At the end of the second quarter of 2009, the number of companies reached a total of 2,590 companies. Figures since the second quarter of 2009 are not yet available.

6.1 Crude oil prices

Prices of crude oil behave much like any other commodity, with price changes in times of shortage or oversupply. There are many factors that influence the oil prices, for example changes in demand, war, oil crisis, supply regulations. The cost of crude oil has been the main contributor to recent fluctuations of gasoline prices. Average world crude oil prices registered record high levels in July 2008, reaching \$133.32 per barrel. At the end of September 2010, average crude oil prices reached \$74.55 a barrel, up from \$72.09 in the previous quarter. In order to see what impact the oil price developments have on our economy we have selected a group of indicators to illustrate the impact these oil price changes have on the prices in the United States and on our consumer prices. Being our main trading partner, price fluctuations in the US export prices are reflected in the consumer prices on our island. Graph 6.1 depict the fluctuations of crude oil price, and the producer prices and export prices in the US.

Note: period average

Source: Central Bureau of Statistics Aruba

The development of the price of crude oil on the international market has an important and direct impact on the average prices on Aruba. The price of oil determines to a great extent the level of the CPI for Aruba, through the price of water, electricity and gasoline. Graph 6.2 illustrate the fluctuations of the price of crude oil, the consumer price index and the fuel surcharge in Aruba. The high inflation recorded during the 2007 and 2008 is partly contributed to the effect of the turnover tax (BBO) and the higher gasoline prices as a result of higher international oil prices.

It is also intriguing to see how other economies are doing compared to ours. This, in spite of the fact that our indicator is not yet a complete GDP indicator. Through the development of the Gross Domestic Product (GDP) of various countries one can make comparisons between countries whose economies impact others and see if their evolutions are then harmonized. The development of the GDP indicators is illustrated in table 6.3.

6.2 GDP Indicators

Table 6.3 portrays major industrialized countries only, since this information was not available for Caribbean countries. Nevertheless, we can compare the development of large industrial countries with that of Aruba. The indicator used for Aruba, however, is not a GDP indicator yet, but remains a Partial Economic Activity Indicator (PEAI) used throughout the Economic Profile.

Table 6.3 Key Economic Indicators

Countries	All in Quarterly and Yearly % Changes			
	GDP Indicator		Retail Sales	
	Quarterly Growth 3rd Quarter 2010	Yearly Growth 3rd Quarter 2010	Quarterly Growth 3rd Quarter 2010 (Volume)	Yearly Growth 3rd Quarter 2010 (Volume)
Australia	0.0	2.5	0.5	2.7
Belgium	0.4	2.0	2.6	1.3
Canada	0.6	3.8	1.3	4.5
France	0.4	1.7	2.2	5.4
Germany	0.8	3.9	0.8	2.5
Greece	-1.6	-4.1	-3.6	-10.3
Netherlands	0.1	1.9	0.4	-0.1
Spain	0.0	0.2	-1.8	-3.8
Brazil	0.4	6.8	2.8	11.3
United States	0.6	3.2	0.5	4.8
Aruba*	-0.3	2.6	5.6	13.3

*= the indicator is not a GDP indicator, but is based on the PEA for Aruba, when more industries are included it will become a GDP indicator

7.2 Government Finance

The *total tax revenue* consists of the sum of taxes on income and profit, commodities, property, services and the nontax revenues. In the third quarter of 2010, the total tax revenue declined by 11.6 percent to compared to the same quarter of 2009, mainly as a result of decreases in the Turnover tax (-54.0%), Taxes on commodities (-1.8%), Taxes on Income & profit (-1.6%) and Long-lease property rights (-52.1%). Government expenditures during the third quarter of 2010 are yet available.

Source: Aruba Ports Authority (APA)

The number of tankers is significantly lower due to the fact that the tankers of Valero are no longer reported to APA. That which is recorded is the number of Mammoth Tankers.

Container ships: barges, car carriers, bulk carriers, container ships, cargo ships and roll on roll off.

Remaining: war ships, research ships, tugboats, small ships, gas carriers, other ships, small vessels, fishing boats and yacht.

9. ANNEX

1.2 Utilities

The *Utilities* industry includes the supply of gas, electricity and water. These three segments are observed together to get an idea of the economic activity of that industry. Their trends are influenced by similar forces and they are weighted by a factor according to their significance in the industry. The total share of Utilities adds up to 4.1% of total value added (GDP), as denoted in the previous section.

1.3 Construction

Construction as an industry refers to all activities that revolve around construction: ground preparation prior to construction, civil engineering, new construction projects as well as renovations, civil and utility construction, infrastructure work, installations, construction finishes (like tiling and other floor covering), repair and maintenance and the renting of construction equipment. The Construction Industry represents 8.6% of total value added (GDP).

1.4 Trade

Needless to say, *Trade* is a very important industry and the second largest industry of Aruba, accounting for 14.2% of our value added (GDP). The Trade industry represents the dynamic and competitive retail and wholesale trade in Aruba. This important industry, thus, influences the Partial Economic Activity Indicator quite significantly and is, therefore, observed closely.

1.5 Hotels & Restaurants

The *Hotels & Restaurants* industry represents a 10.5% share of the GDP, making it the fifth largest industry in Aruba. The industry consists of enterprises engaged in the renting of rooms (hotels, apartments, guest-houses and time-shares) as well as restaurants, cafés, take-away's, etc.. Tourism, which is Aruba's dominant economic influence, contributed greatly to the advance of this industry. While tourists are the main clients of both the hotels and the restaurants on the island, one can observe an increase in business lunches. The industry's contribution to the economy is quite significant, especially when observing the actual size of the industry. For this reason the industry's quarterly performance is of interest for the economy as a whole (See chapter 3 for more information on Tourism).

1.6 Transport, Storage & Communication

The *Transport, Storage & Communication* industry includes ground and pipeline transportation (excluding rentals), water and air transportation, supporting transport activities, like travel agencies, and lastly postal service and telecommunication. The industry has a 8.2% share of total value added of the economy, which makes it the seventh largest industry in Aruba. Because Aruba is a small island surrounded by water, it depends tremendously on the optimal functioning of this industry.

1.7 Housing

The *Housing* industry refers to all the dwelling services provided. This consists of the rent of dwellings and the imputed rent (market value) for the owner from the occupied houses. This industry has a share of 12.6% of GDP. All the people living in a house or apartment are registered under this category as producing units. Consequently, the entire population of Aruba is comprised under the economic activity Housing. The industry reflects the demographic changes, as well as the population's prosperity as a whole. Demographic changes include both, natural and migrating movements, but these cannot be separated from Housing as a whole.

1.8 Public administration & Education

Public administration & Education consists of mostly non-market services, which are difficult to measure regarding output. The production of this industry is measured by wages and salaries. Public administration & Education covers 13.1% of total GDP.
