PART I

BUSINESS CYCLE INDICATORS

1.1 Highlights

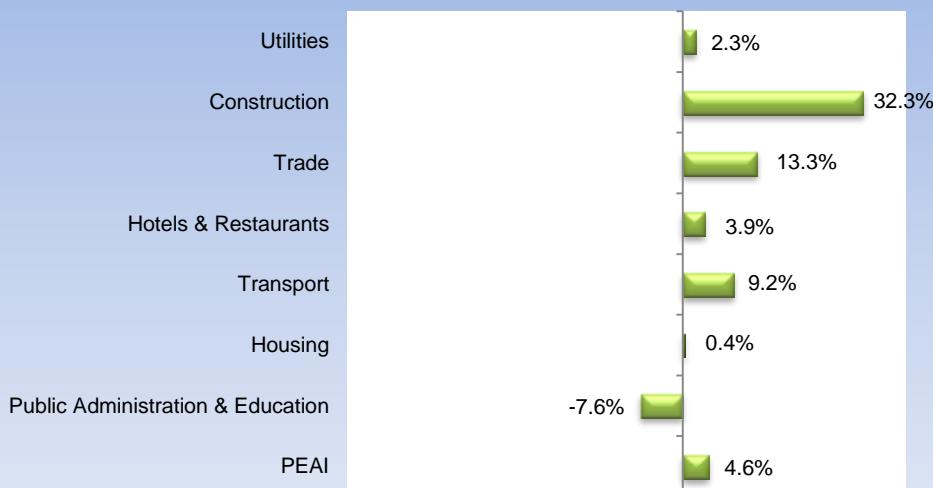

Partial Economic Activity Index (PEAI)

In the second quarter of 2011, the partial economic activity index¹ grew by an estimated 4.6 percent compared to the second quarter of 2010, in contrast to a drop of 0.6 percent recorded in the corresponding period one year earlier. The expansion in economic activity was led by the sectors: Construction (+32.3%), Trade (+13.3%), Transport (+9.2%), Hotels & Restaurants (+3.9%), Utilities (+2.3%) and Housing (+0.4%).

The stay-over tourism performed well in the first six months of 2011, when compared to the same period a year ago. The cruise tourism had positive rates of growth during the first quarter of 2011, but had a weak outcome in the second quarter of 2011. The yearly inflation rate climbed to 4.9% at the end of June 2011, up from 1.8% at the end of June 2010.

Graph 1.1

Real developments of the industries of Aruba for the second quarter of 2011 compared to the same quarter of 2010

Keep in mind that this is an approximation of the economy's tendency. The result of the seven closely examined industries are presented in Graph 1.2. The overall movement of economic activity in these seven industries make up the Partial Economic Activity Index (PEAI). For a better understanding of these findings we will further elaborate on the economy's structure and its development.

¹ The PEAI is measured in real terms.

Note: Provisional figures.

The industries mentioned before are covered to illustrate a better assessment of the business cycle, as they contribute 68.7 percent to the GDP² of Aruba. Each industry is analyzed individually by using two kinds of graphs; a line chart reflecting the index of the industry, and a bar chart reflecting the changes of a quarter compared to the same quarter of the previous year, eliminating the seasonality aspect. The focus remains on the economy as a whole, using its fragments merely to achieve a perception of the business cycle.

Table 1.1.1 displays the indices derived from the available indicators. The first column in the table shows the PEAI, which is followed by the indices of the industries monitored. The percentage share of each industry in the GDP is noted in the first row as well. The information presented below has the year 2000 as base (2000=100) and is revealed on a quarterly basis.

Note to readers

For short-term indicators, the volume development is often based on a limited number of indicators which are thought to be representative for the volume growth of an industry. The weighting of the industries together, according to their share in the GDP, results in the Partial Economic Activity Index (PEAI). The PEAI describes, thus, the volume development of the industries involved. Seven out of ten main economic activities are described in this publication in particular: Utilities, Construction, Trade, Hotels & Restaurants, Transport, Storage & Communication, Housing and Public administration & Education. (For more detailed information on methodology we refer to the Economic Profile Procedure, which is available upon request at the Central Bureau of Statistics).

² The total money value of all final goods and services produced in an economy during a specified period.
Index 2000=100

Table 1.1.2 represents the PEAIndex and its quarterly percentage changes in volume compared to the previous year. The PEAIndex experienced a negative trend from the second quarter of 2008 up to the second quarter of 2010. Since the third quarter of 2010, the Partial Economic Activity has been showing a positive growth compared to the similar period of the previous year. In the second quarter of 2011, the PEAIndex increased by an estimated 4.6 percent compared to the second quarter of 2010, in contrast to a drop of 0.6 percent recorded during the similar period one year earlier. Normally the PEAIndex peaks in the fourth quarter of each year, but Graph 1.3 shows that the peak is reached in 2008 and 2009 during the first quarter.

¹ An index is a single numerical value that reflects the relative size of a variable in the period under review compared with its size in the base year.

* Provisional

1.2 Utilities

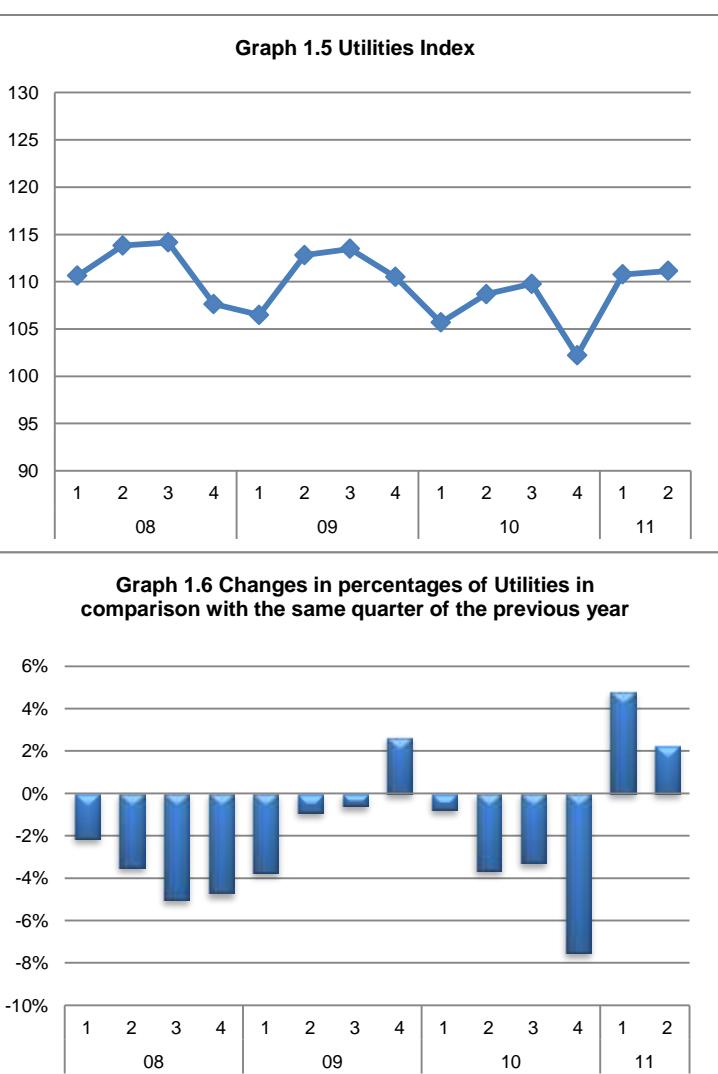

In the second quarter of 2011, economic activity in the *Utilities* industry rose by an estimated 2.3 percent compared to the similar quarter of 2010, in contrast to a drop of 3.7 percent in the similar period one year earlier. The total water delivery increased by 6.3 percent in the second quarter of 2011, particularly as a result of an increase in the water delivery to Valero. However, decreases in average water usage has been recorded by households (-10.9%), the commercial sector (-2.3%), the hotel sector (-2.4%) and the public sector (-4.5%). In the second quarter of 2011, the consumption of gas by households and the commercial sector increased by 5.1 and 5.5 percent respectively, compared to the second quarter of 2010. The electricity distribution from WEB to ELMAR, on the other hand, decreased by 2.3 percent in the second quarter of 2011, when compared to the second quarter of 2010.

In table 1.2 one can see that the utilities index usually peaks during the third quarters of each year.

Table 1.2 Utilities Index with the percentage changes

1.3 Construction

Economic activity in the *Construction* industry continued to increase since the third quarter of 2010. In the second quarter of 2011, the Construction industry rose by 32.3 percent compared to the second quarter of 2010, in contrast to a drop of 22.0 recorded in the similar period one year earlier. The most notable increases were recorded for the imports of Ironworks, pipes, barrel, etc. (+138.2%), Plastic objects (+38.7%), Paint, lacquer, varnish, filling (+44.4%) and Wood & wood goods (+17.5%). Furthermore, value of import of cement increased by 20.7 percent in the second quarter of 2011.

Note: Please be informed that the data is revised because of the processing of additional documents, as well as a newly harmonized system that was introduced at the beginning of 2009.

1.4 Trade

Heavily dependent on seasonal preferences, the *Trade* industry index normally peaks during the fourth quarters of each year (see Graph 1.9). This peak is mainly caused by an increase in the value of imports of goods during the holiday season. In the second quarter of 2011, economic activity in the Trade industry increased by 13.3 percent compared to the same quarter of 2010, mainly as a result of increases in the import value of Pharmaceutical & medical goods (+37.3%), Textiles, clothing, footwear & leather goods (+26.0%), Hardware, glass & paint (+11.3%) and All other specialized goods (+1.1%).

Table 1.4 Trade Index with the percentage changes

Retail and wholesale of pharmaceutical & medical goods

In the second quarter of 2011, import value of pharmaceutical & medical goods increased by 37.3 percent compared to the second quarter of 2010, in contrast to a drop of 6.0 percent recorded during the similar period one year earlier.

Retail and wholesale of textiles, clothing, footwear & leather goods

Compared to the second quarter of 2010, total value of imports of textiles, clothing, footwear & leather goods rose by 26.0 percent in the second quarter of 2011, in contrast to a 4.3 percent drop registered in the same period one year earlier.

Retail and wholesale in hardware, glass & paint

In the second quarter of 2011, the value of imports of hardware, glass & paint increased by 11.3 percent compared to the second quarter of 2010, in contrast to a drop of 3.8 percent recorded in the corresponding period one year earlier.

Retail and wholesale of all other specialized goods

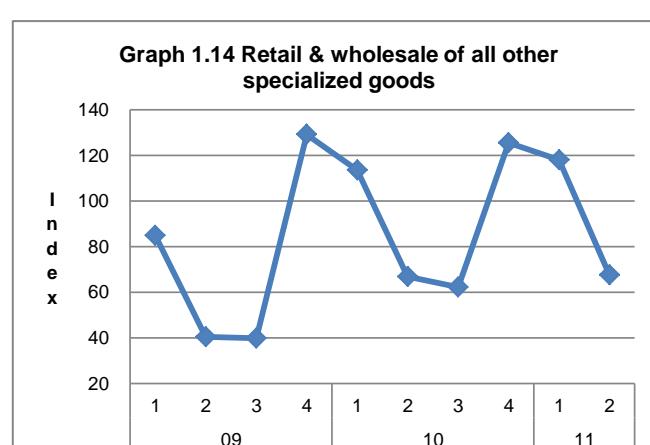

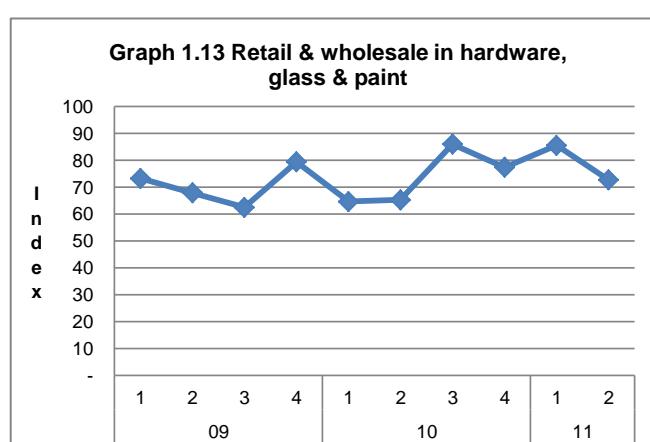

In the second quarter of 2011, import value of all other specialized goods increased by 1.1 percent compared to the second quarter of 2010, following a 65.4 percent growth recorded during the similar period one year earlier.

Retail and wholesale of non specialized goods as in supermarkets, minimarkets, etc.¹

In the second quarter of 2011, value of imports of non-specialized products, mainly food, beverage & tobacco dropped by 12.3 percent compared to the same quarter of 2010, in contrast to a growth of 19.4 percent recorded during the similar period one year earlier.

Retail and wholesale of "household appliances, articles & equipment" and "books & office supplies"

During the second quarter of 2011, value of imports of Household appliances, articles & equipment and Books & office supplies fell with 14.4 and 13.5 percent respectively, compared to the similar quarter of 2010.

¹⁾ Mainly food, beverages and tobacco products as in supermarkets and minimarkets.

1.5 Hotels & Restaurants

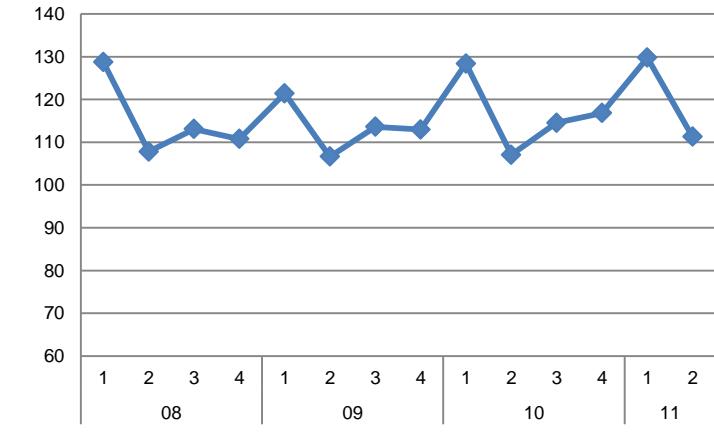

Compared to the second quarter of 2010, the economic activity in the *Hotels & Restaurants* industry increased by an estimated 3.9 percent in the second quarter 2011. The *Hotels & restaurants* industry has been showing a positive trend since the third quarter of 2009. The occupancy rate in hotels and timeshare increased from 71.8 percent in the second quarter of 2010 to 74.1 percent in the second quarter of 2011. In Graph 1.15 one can observe the index movement evolving from the first quarter of 2008 up to the second quarter of 2011.

P Preliminary figures

Figures are subject to revision by reporting countries

1.6 Transport

Economic activity in the *Transport* industry increased by an estimated 9.2 percent in the second quarter of 2011, when compared to the similar quarter of 2010. In the second quarter of 2011, the commercial landings increased by 9.3 percent compared to the similar quarter of 2010. In addition, the Public transportation and the Port traffic in absolute numbers rose by 12.3 and 27.5 percent compared to the second quarter of 2010. On the other hand, vessel content (in BRT) as reported by APA, declined by 6.7 percent compared to the second quarter of 2010.

1.7 Housing

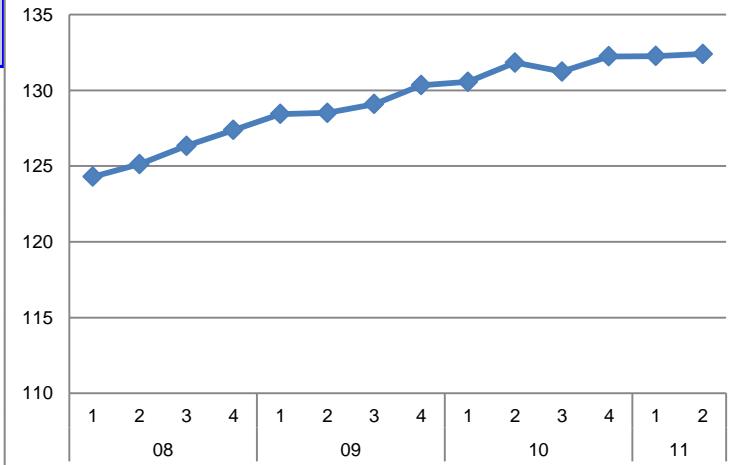

In the second quarter of 2011, economic activity in the *Housing* industry increased by 0.4 percent compared to the second quarter of 2010, following a growth of 2.6 percent recorded during the similar period one year earlier. This growth is directly related to the number of premises connected to the WEB¹, which at the end of June 2011 increased by 171 connections compared to the similar period of 2010. One can notice that the *Housing* index kept on growing in a very steady manner.

1.8 Public administration & Education

In the second quarter of 2011, economic activity in the *Public administration & Education* industry declined by an estimated 7.6 percent compared to the second quarter of 2010, following a drop of 2.2 percent recorded during the similar period one year earlier. The main cause of this drop during the second quarter of 2011 can be attributed to the higher inflation rate, despite the increase in the wage compensations and appropriations in the public sector.

Table 1.11 Public administration & Education Index with the percentage changes

Source: Central Bureau of Statistics Aruba

* Provisional

Methodology

Data are collected from DPO, SVB, Serlimar and Post Aruba. It regards salaries, allowances, compensations and appropriations of the public servants. This compiled data is then corrected with the inflation during the concerning period. Since January 2006, Serlimar and Post Aruba are transferred from public or government ownership to private enterprises. Since August 2007, there are no public servants (status) employed at Post Office Aruba N.V.

CHAPTER 2 Prices

2.1 Consumer Prices

Note to readers

The Central Bureau of Statistics (CBS) has recently made a series of improvements to keep the measures on changes in consumer prices as accurate and up to date as possible. Effective January 1, 2009, the following important changes in the calculation of the CPI have been implemented. Subsequently, the CPI's for 2007 and 2008 have been revised. For comparison reasons, CBS has decided to change from a national classification system to COICOP, which is an internationally agreed classification system for consumer expenditure and prices. The first level of classification in COICOP consists of 12 divisions covering total consumption expenditures of households. As previously noted, the breakdown into divisions is essentially by purpose. At the second level of disaggregation, the 12 divisions are divided into 47 groups of products, which are in turn divided into 114 classes of products at the third level. These 114 classes are divided in 452 elementary aggregates. As of January 2007, the expenditure weights will be based on the Household Expenditure Survey held by CBS during the months of April and May of 2006.

Tables 2.1 & 2.2 show the quarterly percentage changes in prices from 2008 to 2011.

3.1 Tourism

Tourism has an impact on most of the economic activities on the island, which is why we rely on tourism for our prosperity. The beautiful beaches, weather and peaceful ambience are our important natural resources. To monitor this economic mainstay, we have to observe a variety of relevant events, from the supply as well as the demand side. This is done through various means, including administrative sources from various relevant institutions, Tourist surveys that are conducted on a monthly basis and reported on a quarterly basis. The reason different means are utilized for Tourism is that it cannot be reflected in any one single economic activity, but consists of various activities and products. Accordingly and because of its significant impact on the economy, a separate chapter is presented here, which is dedicated solely to Tourism.

3.2 The Supply Side

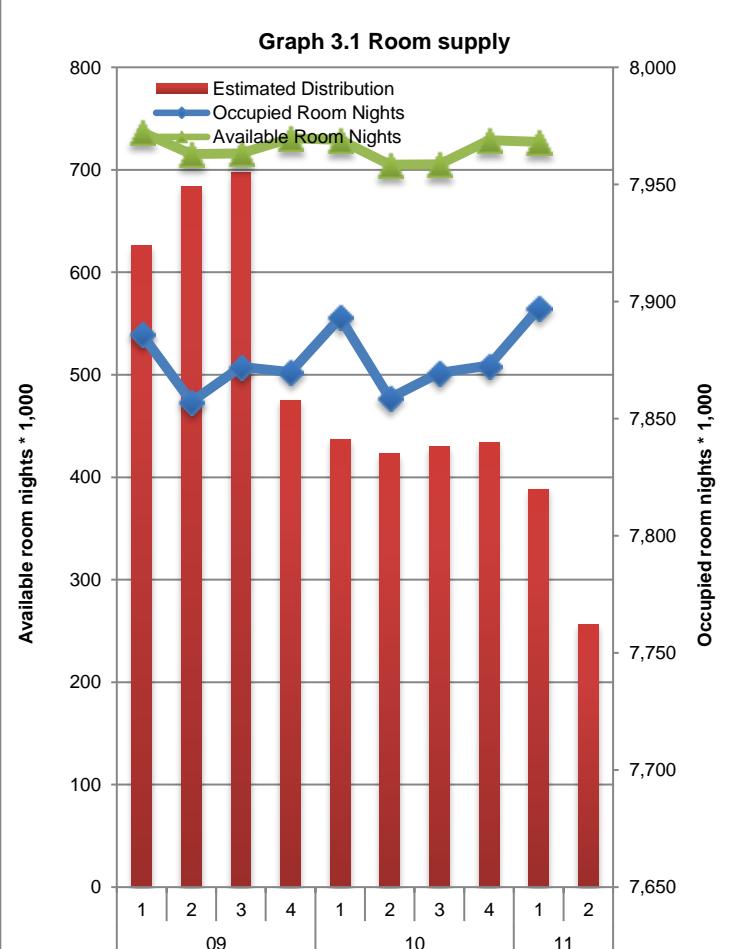

The supply side of Tourism will initially be observed through the number of rooms available from year 2003 up to the second quarter of 2011. Table 3.1 shows the room supply and the occupied room nights throughout the period of 2003 up to the second quarter of 2011. The information is illustrated per quarter, but it should be noted that the quarterly information is not based on factual data. It is based on an assumed distribution of projected yearly additions.

Table 3.1 Hotel Room Supply & Occupied room nights

In second quarter of 2011, the Total average daily rate rose by 7.8 percent compared to the second quarter 2010, following a 0.2 percent growth recorded in the similar period one year earlier.

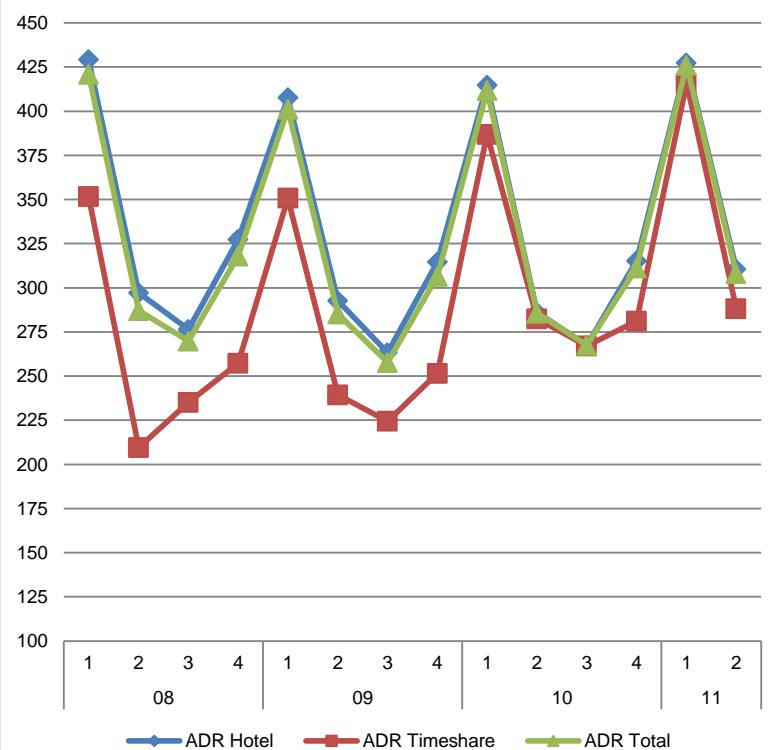

Note to readers

The Average Daily Rate is derived from the Total net room revenue divided by the amount of nights the rooms were occupied by guests.

Source: Central Bureau of Statistics Aruba

Compared to the second quarter of 2010, the Total Revenue per Available Room increased by 14.8 percent in the second quarter of 2011.

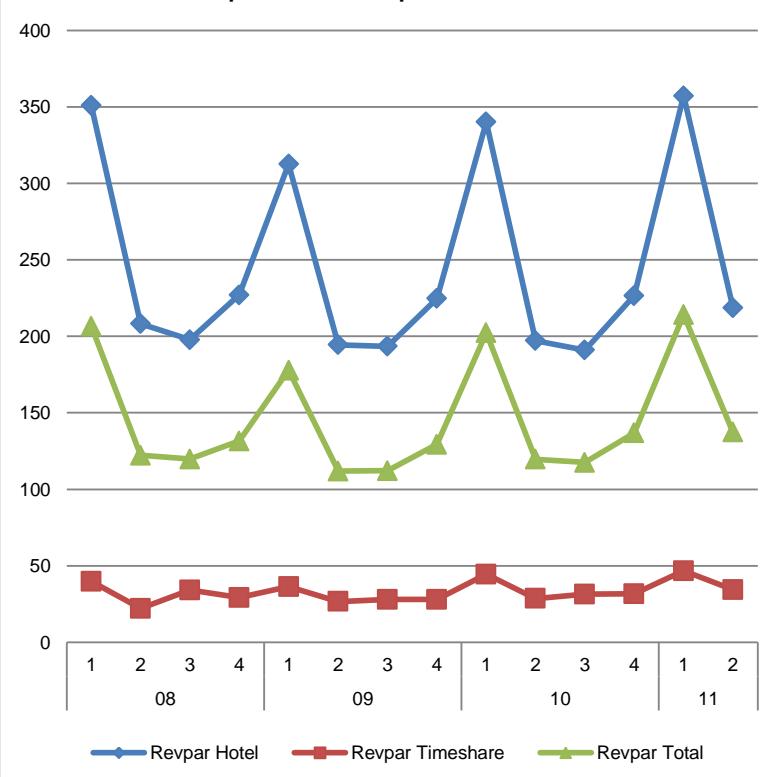

Note to readers

The Revenue per Available Room is derived from the Total net room revenue divided by the total number of rooms available in a property multiplied by the respective number of days in a month.

In the first quarter of 2011, the total room revenue increased by 7.1 percent compared to the same quarter of the previous year, following an increase of 10.4 percent registered in the corresponding period one year earlier. Figures for the second quarter of 2011 are not yet available.

Table 3.4 Room revenue and Revenue per available room

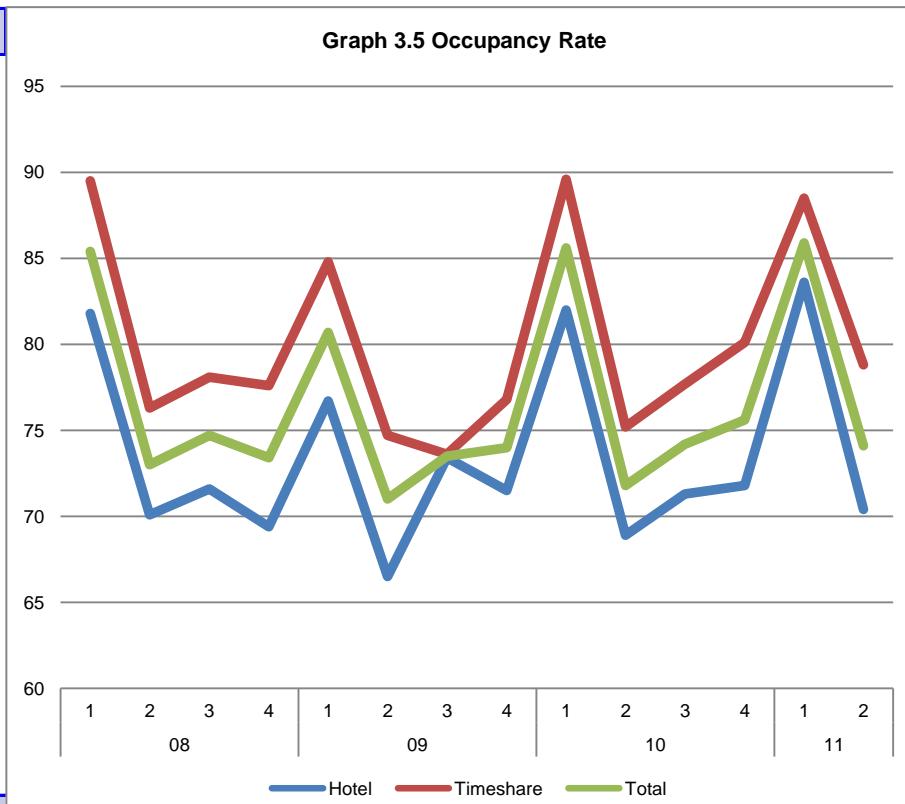

3.3 The Demand Side

Note to readers

To study the demand side we will first look at data from the hotel industry, mainly the Occupancy Rate from 2004 up to the second quarter of 2011. This will then be compared to the Total Visitors and Total Visitor Nights for that period. Graph 3.5 shows the Occupancy Rate per quarter during 2008 till 2011. The Occupancy Rate reflects the percentage of occupancy of the total available rooms in a relevant period of time. In this case, the rate is determined for each quarter of the reported years.

Table 3.5 Occupancy Rate

Year	Q.	Hotel	Timeshare	Total
2004	1	87.1	80.2	84.5

Table 3.8 shows the *Total number of visitors*. Compared to the second quarter of 2010, the total number of visitors to Aruba increased by 1.6 percent in the second quarter of 2011.

Note to readers

The Total number of visitors literally, refers to the total number of visitors (stayover and cruise) that came to Aruba during a certain period of time.

Table 3.8 Total number of visitors

Source: Aruba Tourism Authority, Central Bureau of Statistics Aruba

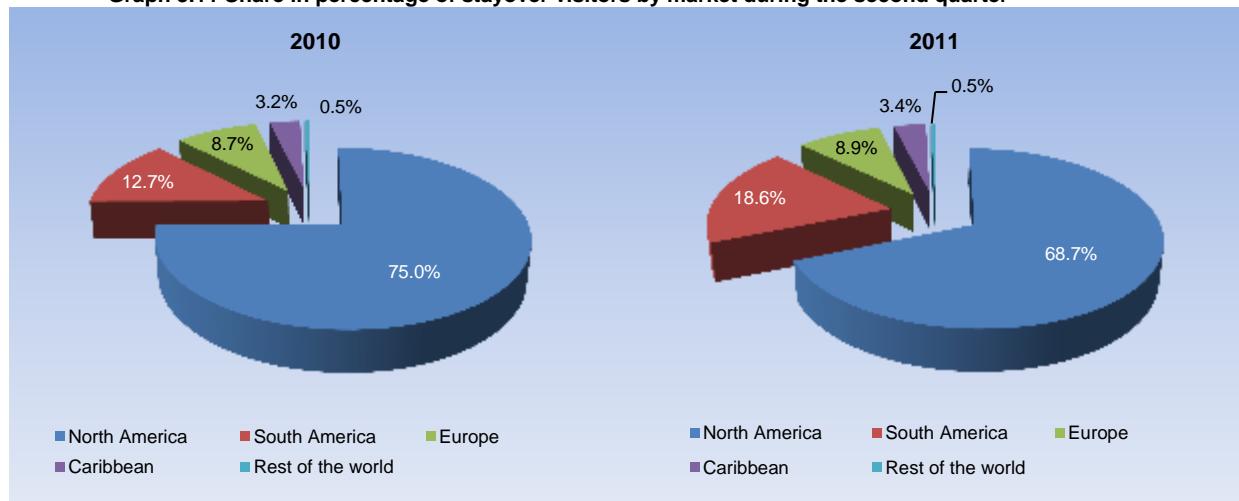

Table 3.9 shows the stayover visitors by market. In the second quarter of 2011, the number of stayover visitors to Aruba increased by 9.8 percent compared to the second quarter of 2010. The South American market showed a positive growth during the second quarter of 2011, especially the Venezuelan market (+75.4%), the Colombian market (+50.7%) and the Brazilian market (+23.8%). In addition, increases in visitors has been recorded for the U.S. market (+1.1%) and the Italian market (+337.7%). Our largest market, the U.S. market represents a market share of 68.7 percent in the second quarter of 2011, down from 71.2 percent a year ago. The Venezuela market, the second largest market, increased from 7.2 percent in 2010 to 11.4 percent in the second quarter of 2011.

Graph 3.14 Number of visitor nights by market

In the following table one can observe the expenditures of visitors coming to Aruba. In the fourth quarter of 2010, the total tourism expenditure in Aruba declined by 15.5 percent compared to the same quarter of 2009, mainly as a result of a drop in the expenditures from the US (-14.8%), Venezuela (-29.4%), the Netherlands (-29.9%) and Canada (-26.3%). The North American market represents a share of 61.7 percent of the total tourism expenditure in the fourth quarter of 2010, up from 61.5 percent recorded in the similar quarter of 2009. Tourism expenditure in 2011 is not yet available. In the following table one can observe the expenditures of visitors coming to Aruba.

Graph 3.15 Share of tourism expenditure by major markets during the fourth quarter of 2010

Note to readers

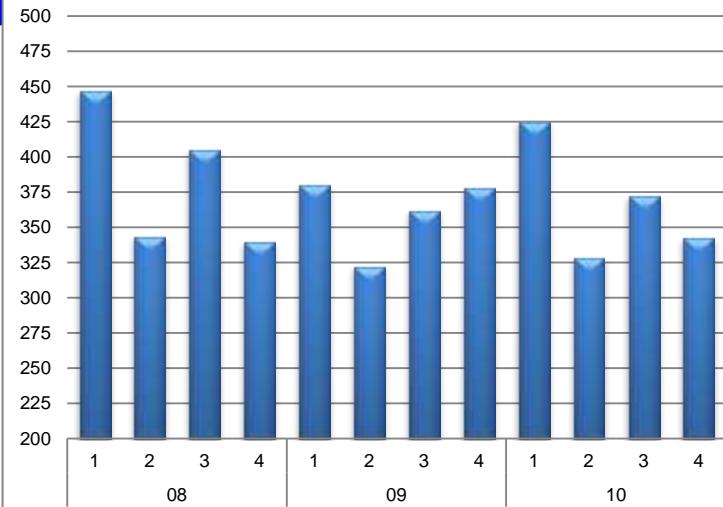

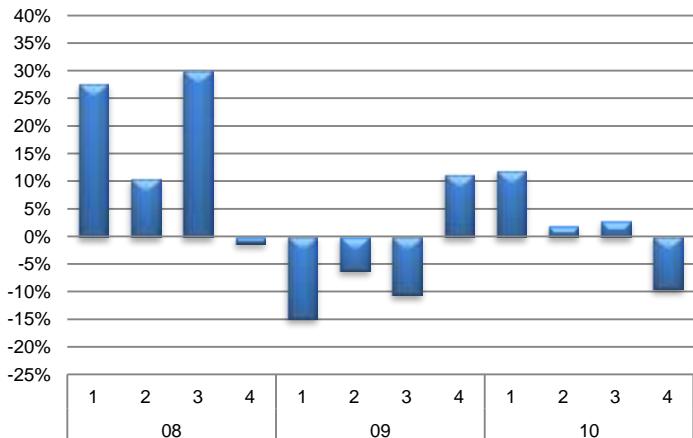

In order to determine the estimated total expenditure made by the visitors, the average daily expenditure is multiplied by the number of stayover visitors and by their average length of stay. In addition, an estimate is made for the accommodation part of a pre-paid package and added to the formula. The estimated total expenditure excludes any other part of pre-paid packages.

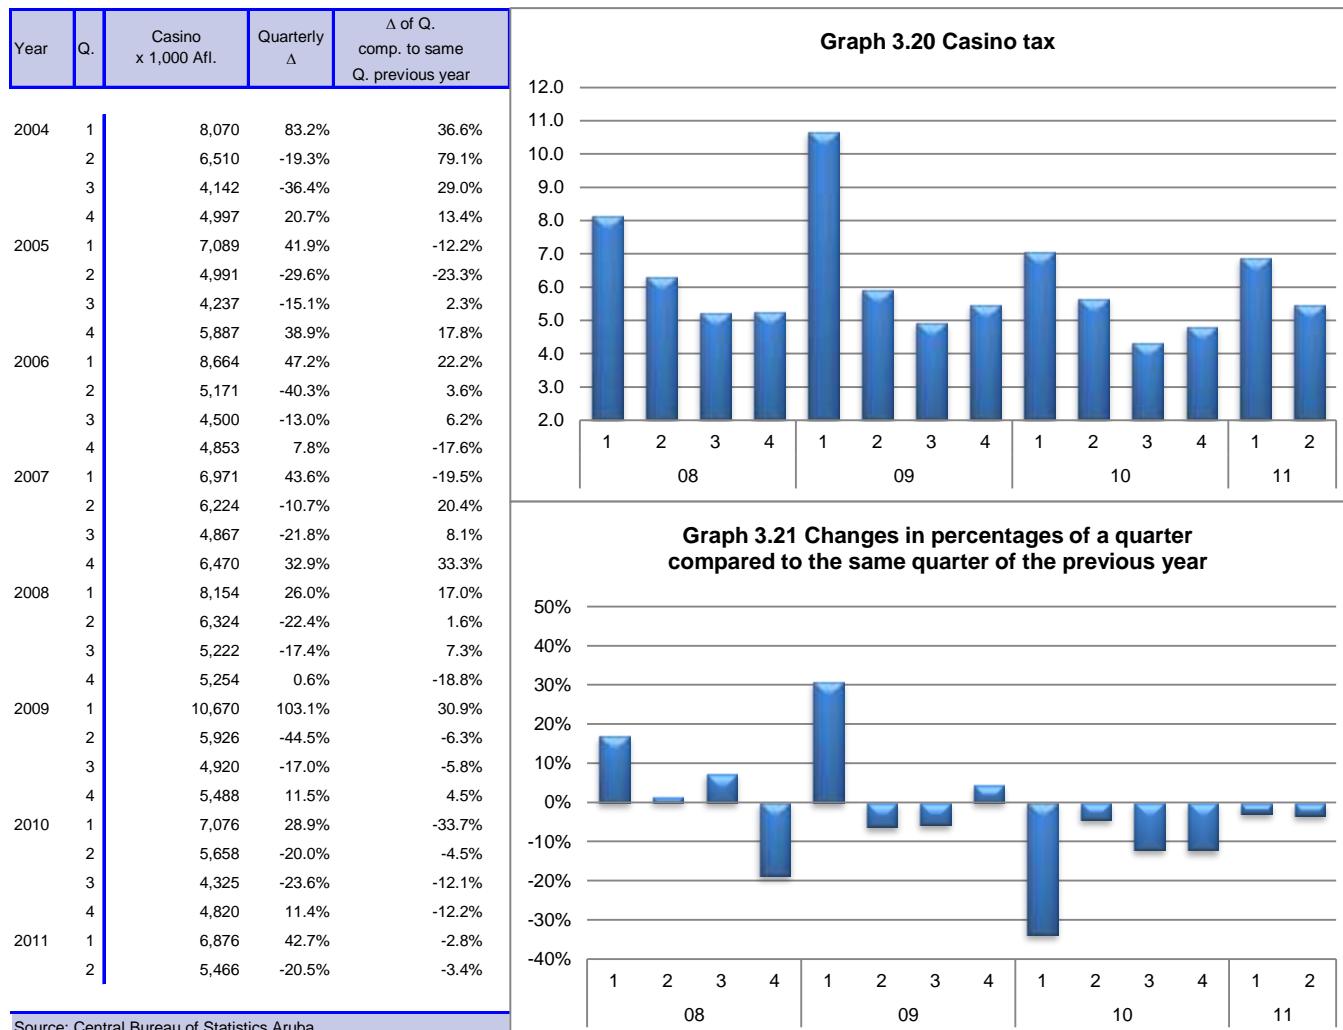

Graph 3.16 Estimated total tourism expenditure**Graph 3.17 Changes in percentages of a quarter compared to the same quarter of the previous year**

According to the survey the total amount of money spent by visitors had shown a positive pattern from the fourth quarter of 2009 up to the third quarter of 2010, when compared to the similar quarter of the previous year. In the fourth quarter of 2010, the total estimated tourism expenditures fell with 9.5 percent compared to the fourth quarter of 2009. The estimated total tourism expenditure in 2011 is not yet available.

In the second quarter of 2011, the tourist tax revenue increased by 61.2 percent compared to the second quarter of 2010, following an increase of 16.0 percent recorded in the similar period one year earlier. The casino tax revenue declined by 3.4 percent in the second quarter of 2011, when compared to the second quarter of 2010.

CHAPTER 4 Foreign Trade in Merchandise

4.1 Total import

In the second quarter of 2011, total value of import to Aruba expanded by 18.1 percent compared to the second quarter of 2010, reaching a total value of approximately Afl. 489.3 million. This growth is mainly caused by an increase in the regular import of goods to Aruba (+19.1%) and the import of goods to the Freezone of Aruba (+11.4%). See Table 4.2 and Table 4.3.

Table 4.1 Total import to Aruba with percentage changes

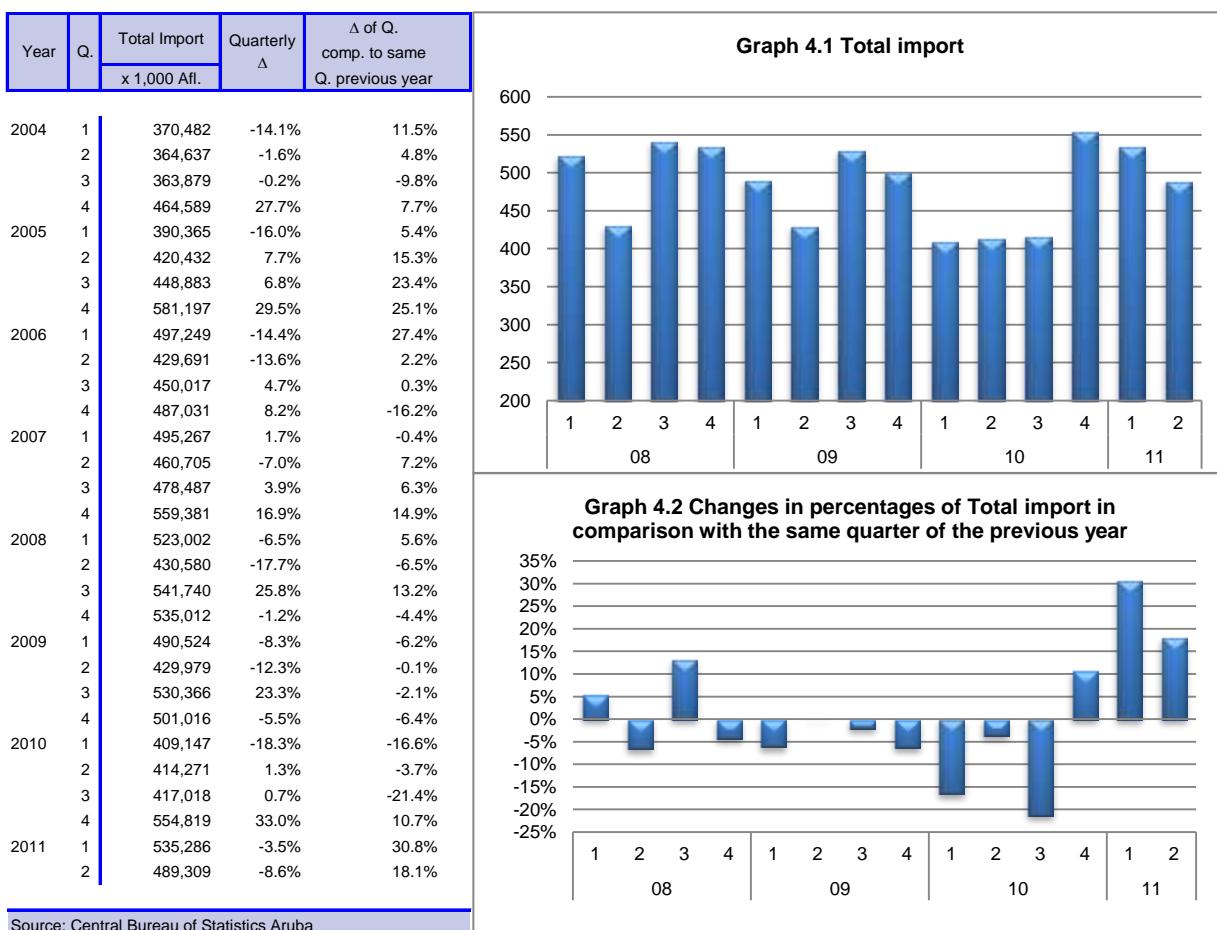

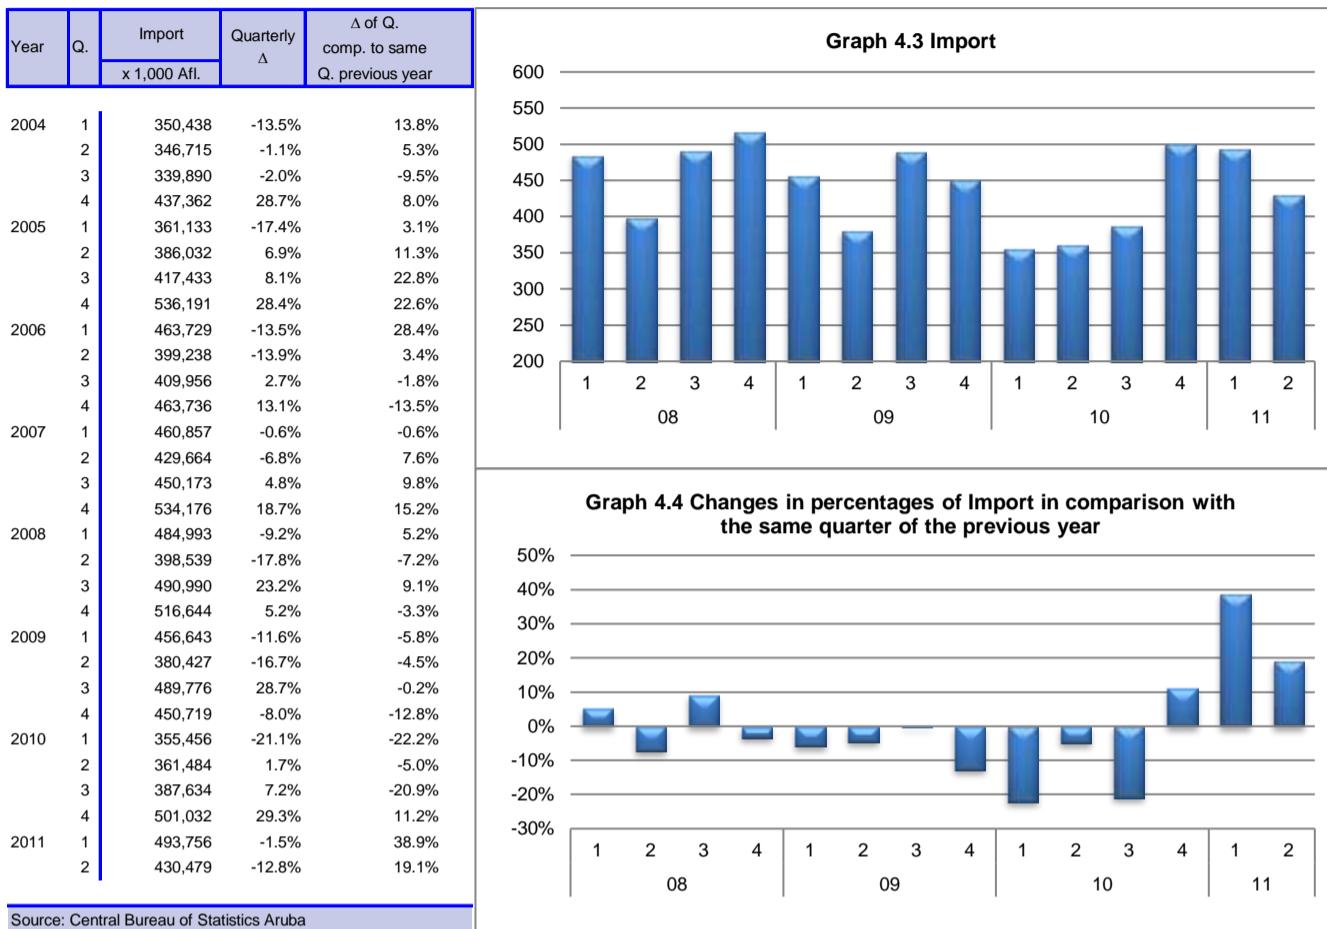

Table 4.2 shows the import figures for Aruba. In the second quarter of 2011, the value of regular import of goods to Aruba increased by 19.1 percent compared to the similar quarter of 2010, in contrast to a drop of 5.0 percent recorded in the corresponding period one year earlier.

Table 4.2 Import to Aruba with percentage changes

In the second quarter of 2011, the total value of goods to the Freezone of Aruba rose by 11.4 percent compared to the second quarter of 2010, following a growth of 6.5 percent recorded in the similar period one year earlier.

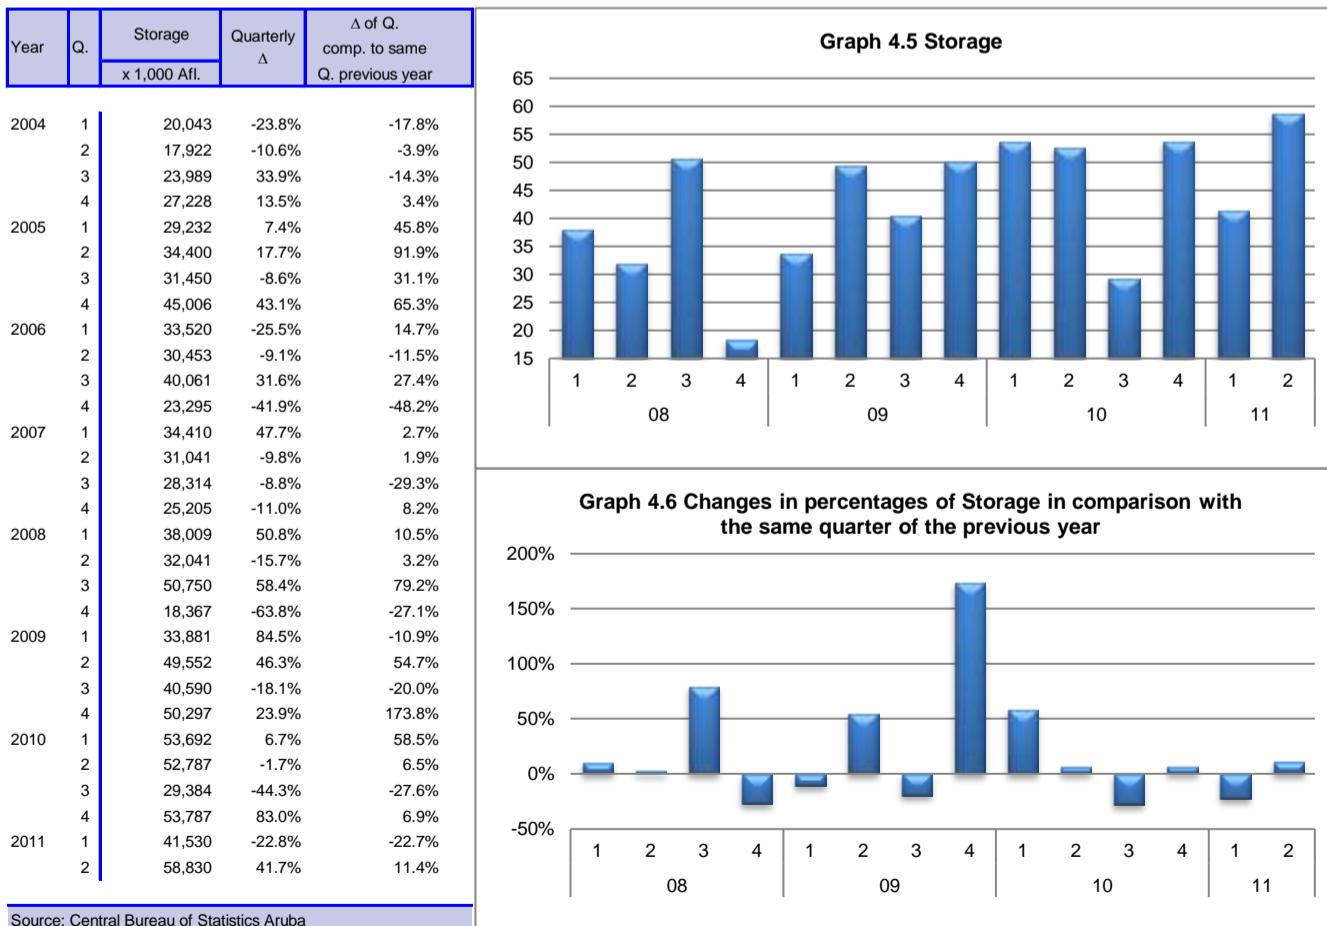

Table 4.3 Freezone of Aruba with percentage changes

Table 4.4 shows the import by major markets. In the second quarter of 2011, the total regular imports increased by 19.1 percent compared to the second quarter of 2010. Increases in value of imports has been recorded for all markets, particularly, North America (+17.2%), Europe (+29.2%), Central America (+19.2%), Caribbean (+20.8%), Rest of the World (+24.1%) and South America (+1.9%). Approximately 56.2 percent of the total value of imported commodities to Aruba comes from the North American market, which dropped from 57.1 percent in the similar quarter of 2010.

Graph 4.7 Market share of import to Aruba by major market during the second quarter of 2011

The following table shows the storage by major markets. Compared to the second quarter 2010, import value of goods to the Freezone Aruba expanded by 11.4 percent in the second quarter of 2011, mainly as a result of increases in the import of goods from North America (+576.0%) and the Rest of the World (+110.5%). On the other hand, decreases were recorded for imports from South America (-2.6%), Caribbean (-47.8%), Europe (-1.0%) and Central America (-29.6%). In the second quarter of 2011, the market share of Europe fell from 48.2% to 42.8%.

Market share of value of export in transit from Aruba by major market during the second quarter of 2011

5.1 Enterprises

The statistics presented in this chapter covers business and labor information of Aruba, as seen from the demand side. The main purpose of enterprise statistics is to show how enterprises are doing in Aruba. Enterprises in Aruba cover all incorporated and unincorporated enterprises, which are economically active, and that have at least one employee on their payroll. Civil servants, unincorporated enterprises with no employees, private households with employed persons and incorporated enterprises with no employees are excluded from this definition. Enterprises are classified according to the main activity, size and region of workplace. This information is based on quarterly data as collected by the Social Security Bank. This data is submitted to the CBS.

Table 5.1 illustrates the number of companies. At the end of the second quarter of 2011, the number of companies reached a total of 2,638 companies.

Table 5.1 Number of companies

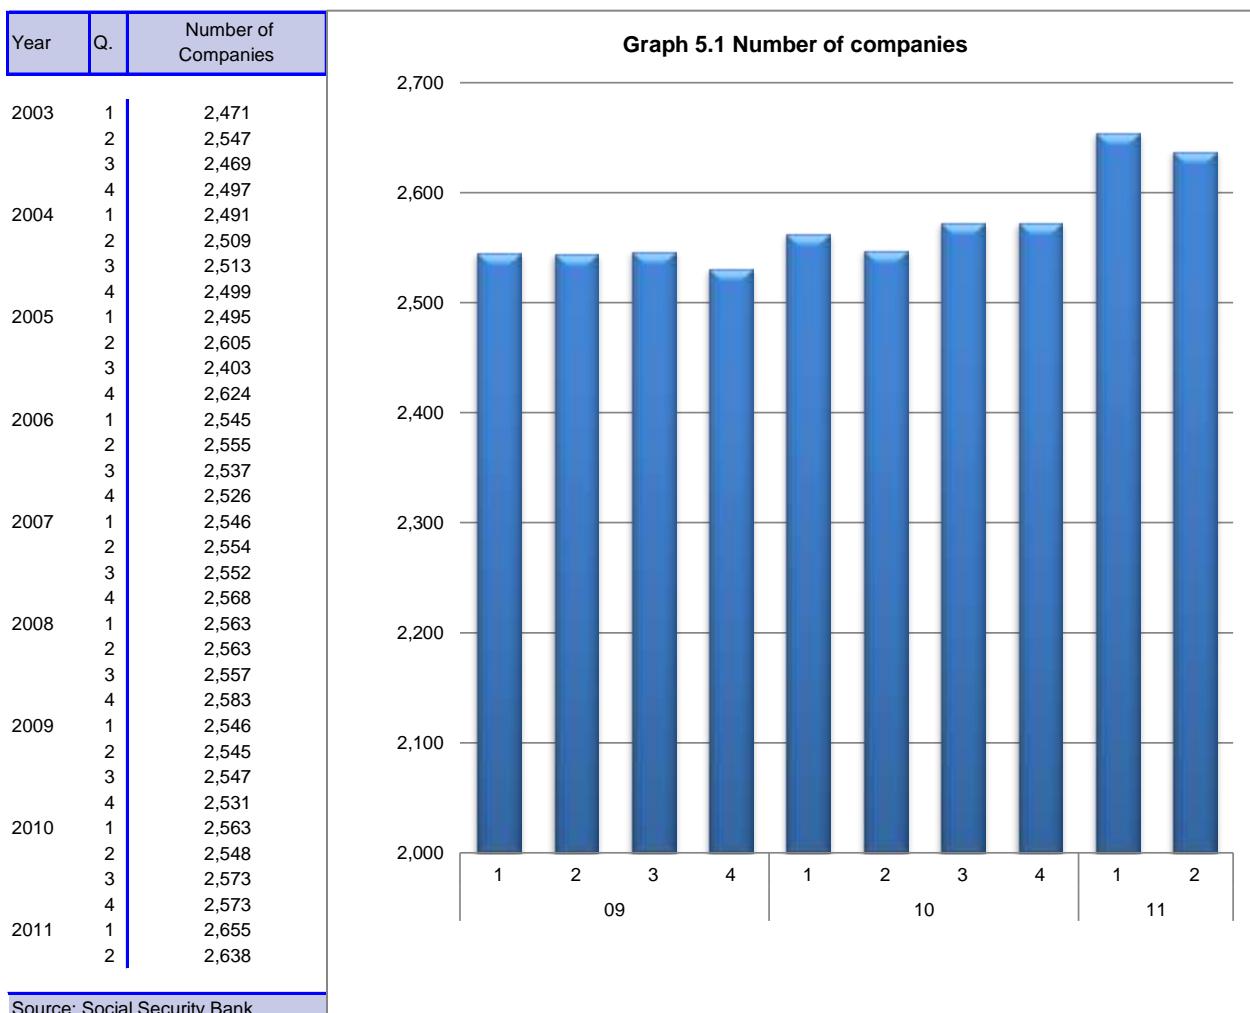

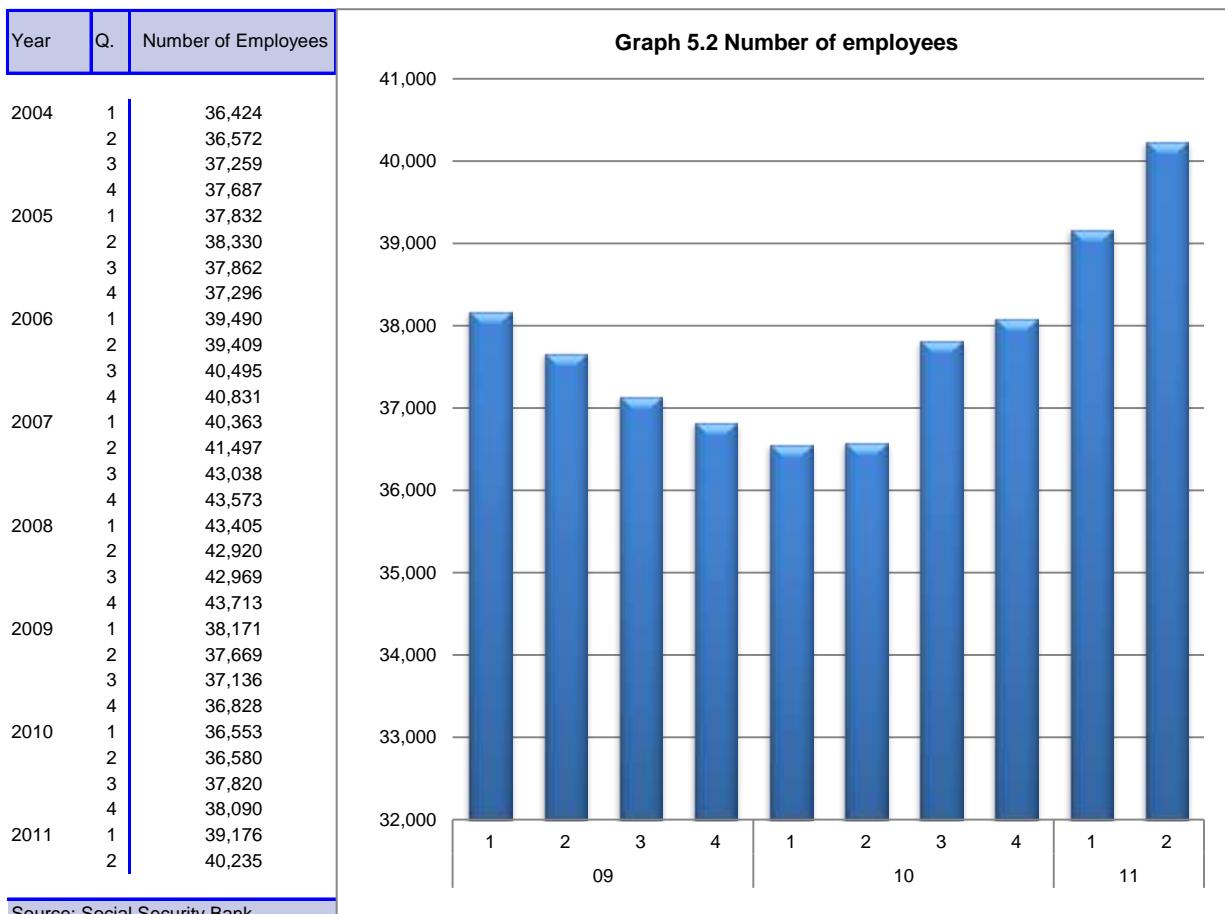

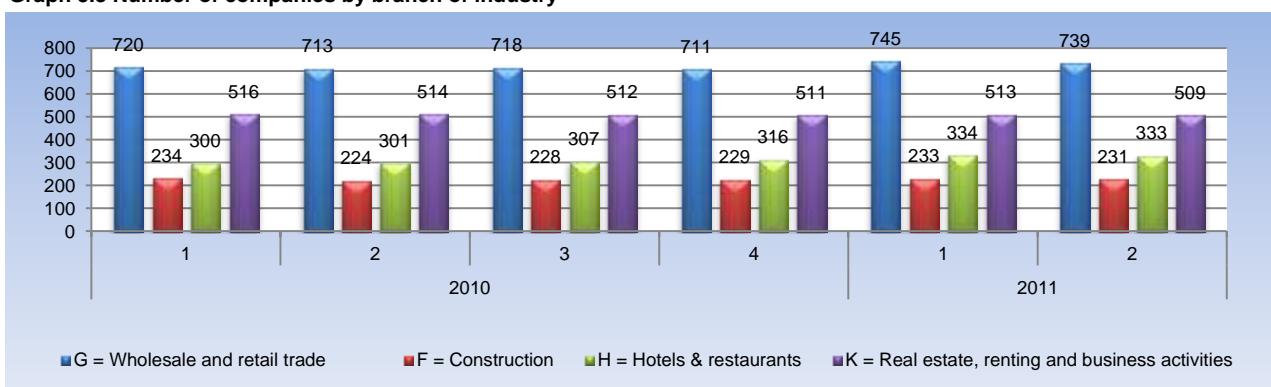

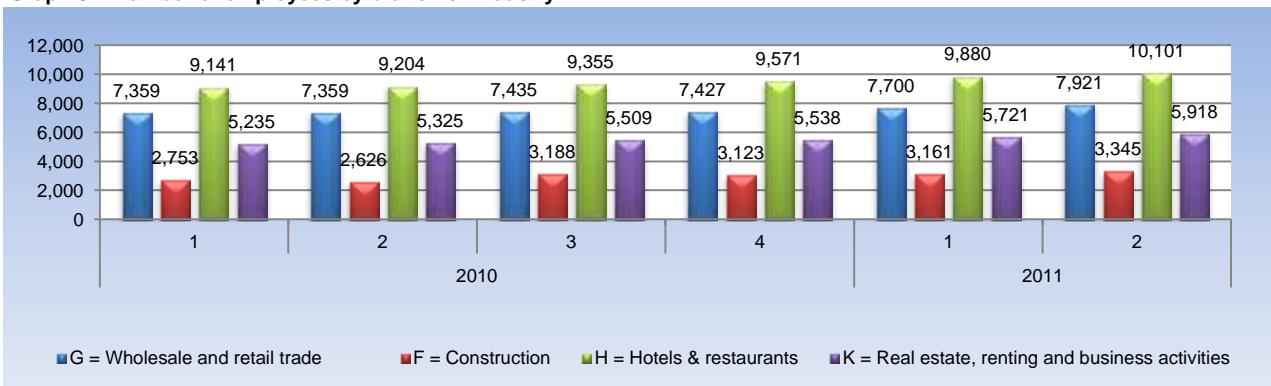

Table 5.2 Number of employees

In the second quarter of 2011, the total number of employees increased by 2.7 percent compared to the previous quarter, reaching a total of 40,235 employees.

CHAPTER 6 International Aspects

6.1 Crude oil prices

Prices of crude oil behave much like any other commodity, with price changes in times of shortage or oversupply. There are many factors that influence the oil prices, for example changes in demand, war, oil crisis, supply regulations. The cost of crude oil has been the main contributor to recent fluctuations of gasoline prices. Average world crude oil prices registered record high levels in July 2008, reaching \$133.32 per barrel. At the end of June 2011, average crude oil prices reached \$111.08 a barrel, up from \$109.06 in the previous quarter. In order to see what impact the oil price developments have on our economy we have selected a group of indicators to illustrate the impact these oil price changes have on the prices in the United States and on our consumer prices. Being our main trading partner, price fluctuations in the US export prices are reflected in the consumer prices on our island. Graph 6.1 depict the fluctuations of crude oil price, and the producer prices and export prices in the US.

Graph 6.2 Relevant economic indicators (Aruba)

The development of the price of crude oil on the international market has an important and direct impact on the average prices on Aruba. The price of oil determines to a great extend the level of the CPI for Aruba, through the price of water, electricity and gasoline. Graph 6.2 illustrate the fluctuations of the price of crude oil, the consumer price index and the fuel surcharge in Aruba. The high inflation recorded during the 2007 and 2008 is partly contributed to the effect of the turnover tax (BBO) and the higher gasoline prices as a result of higher international oil prices.

It is also intriguing to see how other economies are doing compared to ours. This, in spite of the fact that our indicator is not yet a complete GDP indicator. Through the development of the Gross Domestic Product (GDP) of various countries one can make comparisons between countries whose economies impact others and see if their evolutions are then harmonized. The development of the GDP indicators is illustrated in table 6.3.

6.2 GDP Indicators

Table 6.3 portrays major industrialized countries only, since this information was not available for Caribbean countries. Nevertheless, we can compare the development of large industrial countries with that of Aruba. The indicator used for Aruba, however, is not a GDP indicator yet, but remains a Partial Economic Activity Indicator (PEAI) used throughout the Economic Profile.

Table 6.3 Key Economic Indicators

Countries	All in Quarterly and Yearly % Changes			
	GDP Indicator		Retail Sales	
	Quarterly Growth 2nd Quarter 2011	Yearly Growth 2nd Quarter 2011	Quarterly Growth 2nd Quarter 2011 (Volume)	Yearly Growth 2nd Quarter 2011 (Volume)
Australia	n.a.	n.a.	0.2	0.1
Belgium	0.3	2.1	1.3	2.3
Canada	-0.1	2.1	0.6	2.5
France	-0.1	1.7	-0.2	2.9

7.2 Government Finance

The *Total tax revenue* consists of the sum of taxes on income and profit, commodities, property, services and the nontax revenues. In the second quarter of 2011, the total tax revenue declined by 52.6 percent to compared to the same quarter of 2010, mainly as a result of a incidental revenue (approximately Afl. 260 million) which was collected in the second quarter of 2010. Furthermore, the Wage tax and the Dividend tax fell with 7.2 and 47.3 percent respectively, in the second quarter of 2011.

In addition, decreases were recorded for the Long-lease property rights (-77.1%), Land tax (-33.6%) and Transfer tax (-37.8%).

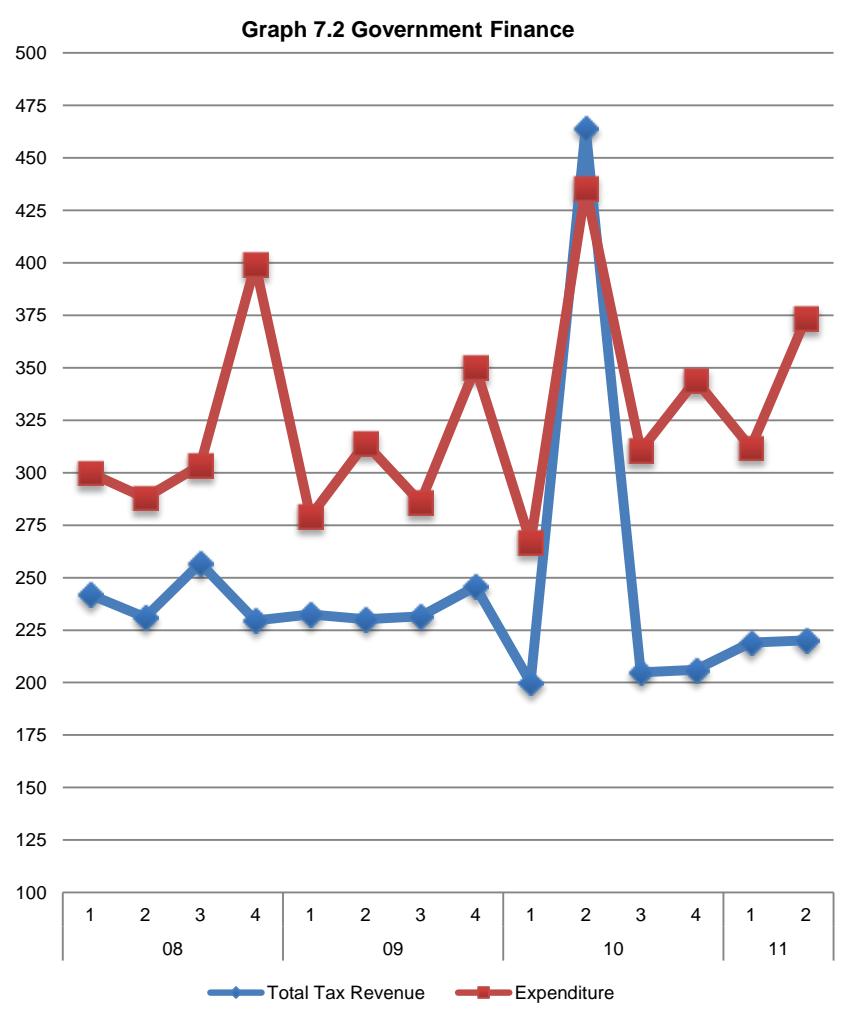

On the other hand, increases were recorded for the Profit tax revenue (+36.1%), Tourist tax (+61.2%), Import duties (+15.5%), Turnover tax (+17.0%) and the Excises on beer (+35.3%).

The Government expenditures fell with 14.3 percent in the second quarter of 2011, when compared to the similar quarter of 2010. This drop in government expenditure is the result of decreases in the expenditures of Transfer to AZV (-43.9%), Goods & services (-10.2%), Development fund spending (-37.9%), Investment (-17.3%), Wage subsidies (-8.9%) and the Residual item (-61.8%).

7.3 Exchange Rates

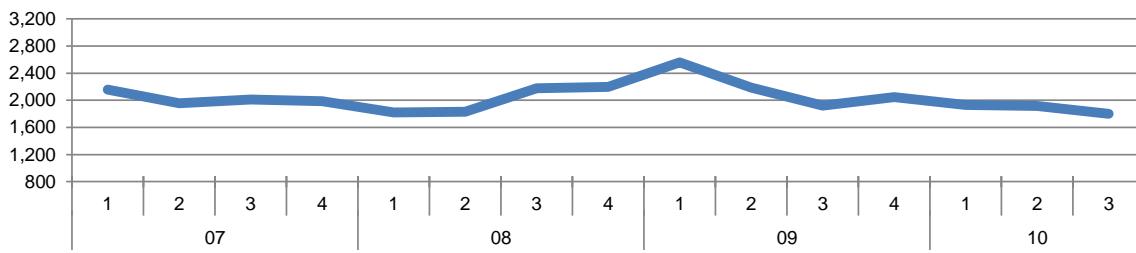

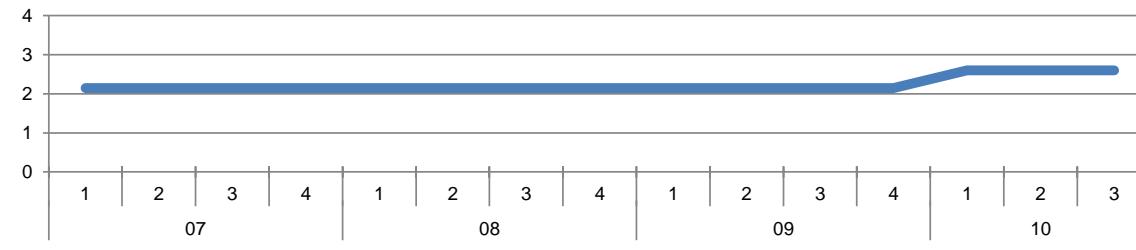

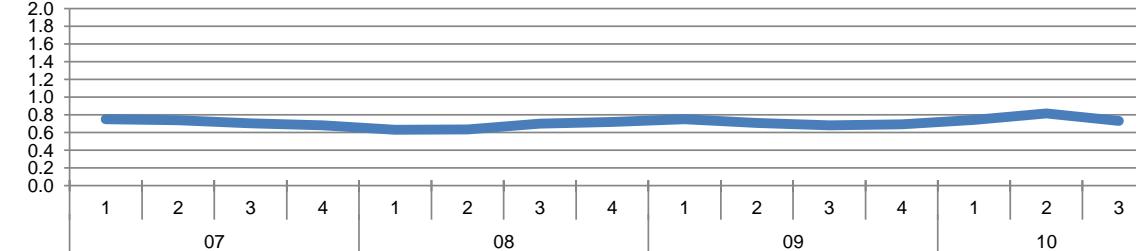

In table 7.9 on the following page, countries are selected based on their importance to Aruba in respect to foreign trade and tourism. The table shows the exchange rates of the above mentioned countries versus the US Dollar. The Aruban Florin is fixed to the US Dollar at a rate of Afl. 1.79= US\$ 1.00.

Table 7.9 Exchange Rates

Source: Aruba Ports Authority (APA)

The number of tankers is significantly lower due to the fact that the tankers of Valero are no longer reported to APA. That which is recorded is the number of Mammoth Tankers.

Container ships: barges, car carriers, bulk carriers, container ships, cargo ships and roll on roll off.

Remaining: war ships, research ships, tugboats, small ships, gas carriers, other ships, small vessels, fishing boats and yacht.

9. ANNEX

1.2 Utilities

The *Utilities* industry includes the supply of gas, electricity and water. These three segments are observed together to get an idea of the economic activity of that industry. Their trends are influenced by similar forces and they are weighted by a factor according to their significance in the industry. The total share of Utilities adds up to 4.1% of total value added (GDP), as denoted in the previous section.

1.3 Construction

Construction as an industry refers to all activities that revolve around construction: ground preparation prior to construction, civil engineering, new construction projects as well as renovations, civil and utility construction, infrastructure work, installations, construction finishes (like tiling and other floor covering), repair and maintenance and the renting of construction equipment. The Construction Industry represents 8.6% of total value added (GDP).

1.4 Trade

Needless to say, *Trade* is a very important industry and the second largest industry of Aruba, accounting for 14.2% of our value added (GDP). The Trade industry represents the dynamic and competitive retail and wholesale trade in Aruba. This important industry, thus, influences the Partial Economic Activity Indicator quite significantly and is, therefore, observed closely.

1.5 Hotels & Restaurants

The *Hotels & Restaurants* industry represents a 10.5% share of the GDP, making it the fifth largest industry in Aruba. The industry consists of enterprises engaged in the renting of rooms (hotels, apartments, guest-houses and time-shares) as well as restaurants, cafés, take-away's, etc.. Tourism, which is Aruba's dominant economic influence, contributed greatly to the advance of this industry. While tourists are the main clients of both the hotels and the restaurants on the island, one can observe an increase in business lunches. The industry's contribution to the economy is quite significant, especially when observing the actual size of the industry. For this reason the industry's quarterly performance is of interest for the economy as a whole (See chapter 3 for more information on Tourism).

1.6 Transport, Storage & Communication

The *Transport, Storage & Communication* industry includes ground and pipeline transportation (excluding rentals), water and air transportation, supporting transport activities, like travel agencies, and lastly postal service and telecommunication. The industry has a 8.2% share of total value added of the economy, which makes it the seventh largest industry in Aruba. Because Aruba is a small island surrounded by water, it depends tremendously on the optimal functioning of this industry.

1.7 Housing

The *Housing* industry refers to all the dwelling services provided. This consists of the rent of dwellings and the imputed rent (market value) for the owner from the occupied houses. This industry has a share of 12.6% of GDP. All the people living in a house or apartment are registered under this category as producing units. Consequently, the entire population of Aruba is comprised under the economic activity Housing. The industry reflects the demographic changes, as well as the population's prosperity as a whole. Demographic changes include both, natural and migrating movements, but these cannot be separated from Housing as a whole.

1.8 Public administration & Education

Public administration & Education consists of mostly non-market services, which are difficult to measure regarding output. The production of this industry is measured by wages and salaries. Public administration & Education covers 13.1% of total GDP.
