PART I

BUSINESS CYCLE
INDICATORS

1.1 Highlights

Partial Economic Activity Index (PEAI)

Note: In an effort to continuously improve our data in order to supply reliable information to the public, we have proceeded to apply the period average inflation to eliminate the effect of price changes in the industries of construction, trade and public administration, instead of the end of period inflation. The CBS has revised the figures for these industries.

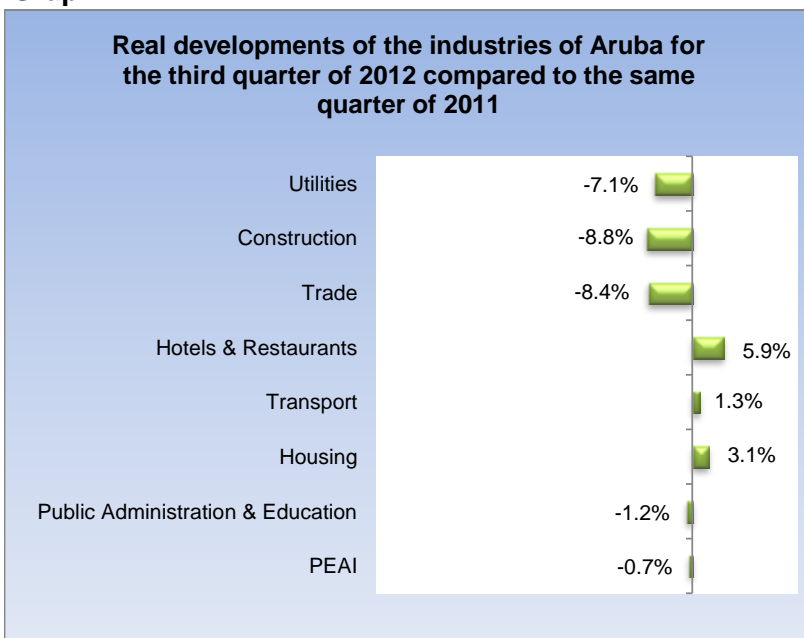

During the third quarter of 2012, the partial economic activity index¹ fell with an estimated 0.7 percent compared to the similar period of 2011. The decrease of the partial economic activity was led by the sectors Trade (-8.4%), Construction (-8.8%), Utilities (-7.1%) and Public Administration (-1.2%). On the other hand, economic activity in the Hotels & Restaurants, Housing and Transport increased by 5.9, 3.1 and 1.3 percent, respectively, when compared to the third quarter of 2011.

Economic activities in the Trade industry fell with 8.4 percent in the third quarter of 2012, when compared to the third quarter of 2011. Decreases were recorded for the value of import of 'Hardware, glass & paint', 'Household appliances, articles & equipment', 'Non-specialized products', 'Pharmaceutical & medical goods' and 'Specialized goods'.

The economic activity in the Construction industry decreased by 8.8 percent. This is mainly caused by a drop in the import value of construction materials during the third quarter of 2012, when compared to the third quarter of 2011.

Furthermore, economic activity in the Utilities and Public administration industries declined by 7.1 and 1.2 percent respectively, compared to the similar quarter of 2011.

Graph 1.1

Keep in mind that this is an approximation of the economy's tendency. The result of the seven closely examined industries are presented in Graph 1.1. The overall movement of economic activity in these seven industries make up the Partial Economic Activity Index (PEAI). For a better understanding of these findings we will further elaborate on the economy's structure and its development.

¹ The PEA I is measured in real terms.

The industries mentioned before are covered to illustrate a better assessment of the business cycle, as they contribute 68.7 percent to the GDP² of Aruba. Each industry is assessed individually by analyzing the development of the index over time. The focus remains on the economy as a whole, using its fragments merely to achieve a perception of the business cycle.

Table 1.1.1 displays the indices derived from the available indicators. The first column in the table shows the PEAI, which is followed by the indices of the industries monitored. The percentage share of each industry in the GDP is noted in the first row as well. The information presented below has the year 2000 as base (2000=100) and is revealed on a quarterly basis.

Note to readers

For short-term indicators, the volume development is often based on a limited number of indicators which are thought to be representative for the volume growth of an industry. The weighting of the industries together, according to their share in the GDP, results in the Partial Economic Activity Index (PEAI). The PEA I describes, thus, the volume development of the industries involved. Seven out of ten main economic activities are described in this publication in particular: Utilities, Construction, Trade, Hotels & Restaurants, Transport, Storage & Communication, Housing and Public administration & Education. (For more detailed information on methodology we refer to the Economic Profile Procedure, which is available upon request at the Central Bureau of Statistics).

² The total money value of all final goods and services produced in an economy during a specified period. Index 2000=100

Table 1.1.2 represents the PEAI and its quarterly percentage changes in volume compared to the previous year. The PEAI has been showing a positive trend from the third quarter of 2010 up to the fourth quarter of 2011. Since the first quarter of 2012, the PEAI experienced a decrease when compared to the similar quarter of the previous year. In the third quarter of 2012, the PEAI fell with an estimated 0.7 percent compared to the third quarter of 2011, in contrast to a 6.7 percent growth recorded in the similar period one year earlier.

¹ An index is a single numerical value that reflects the relative size of a variable in the period under review compared with its size in the base year.

* Provisional

1.2 Utilities

In the third quarter of 2012, economic activity in the *Utilities* industry declined by 7.1 percent compared to the similar quarter of 2011, in contrast to a growth of 6.0 percent growth recorded in the similar period one year earlier. During the third quarter of 2012, the total water delivery (Aruba, ships & Valero) fell with 10.7 percent compared to the third quarter of 2011, mainly as a result of a drop in the water delivery to Valero (-75.0%). However, with the exception of average water usage by households (-0.1%), usage increases has been recorded for the commercial sector (+5.7%), hotels (+3.9%) and public offices (+11.2%).

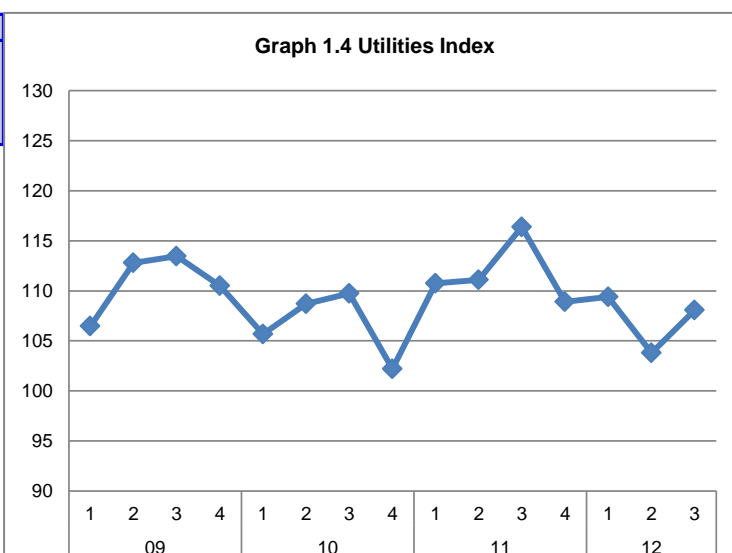

The electricity distribution to ELMAR declined by 2.4 percent in the third quarter of 2012, when compared to the similar quarter of 2011.

In the third quarter of 2012, the total consumption of gas fell with 15.3 percent compared to the third quarter of 2011, as a result of decreases in households (-8.8%) and commercial sector (-18.1%).

1.3 Construction

Economic activity in the *Construction* industry declined by 8.5 percent in the third quarter of 2012, when compared to the third quarter of 2011. The main decreases during the third quarter of 2012 were recorded for the import of Wood & wood goods (-54.9%), Ironworks, pipes, barrel & other (-20.2%), Switches (-39.6%) and Wire insulated, electrical parts of machines (-44.8%). In addition, the import value of Paint, lacquer, varnish, etc. and Cement fell with 13.8 and 11.5 percent respectively.

Graph 1.6 Construction Index

Graph 1.7 Changes in percentages of Construction in comparison with the same quarter of the previous year

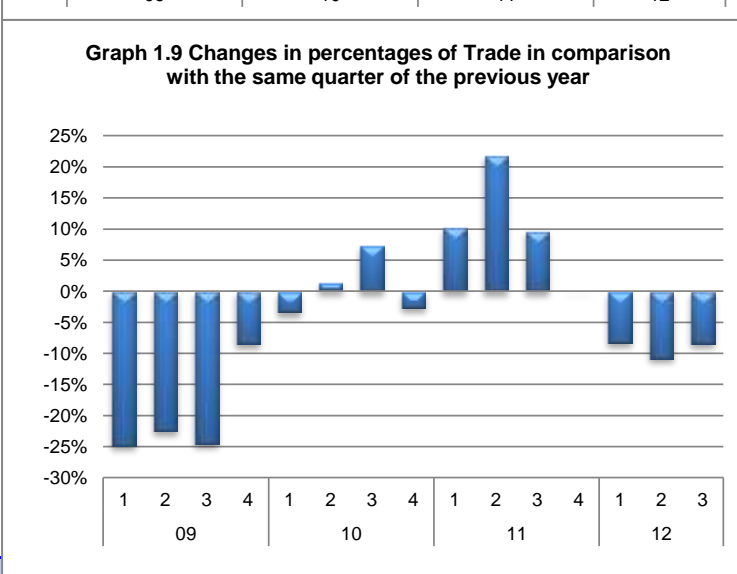

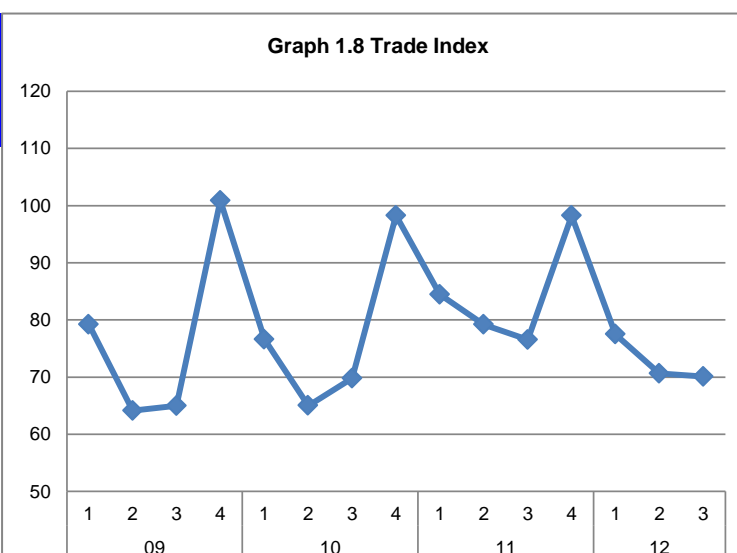

1.4 Trade

Heavily dependent on seasonal preferences, the *Trade* industry index normally peaks during the fourth quarters of each year (see Graph 1.8). This peak is mainly caused by increases in the value of imports of goods during the holiday season. In the third quarter of 2012, economic activity in the Trade industry fell with 8.4 percent compared to the same quarter of 2011, mainly as a result of decreases in the import value of Hardware, glass & paint (-34.4%), Household appliances, articles & equipment (-33.0%), Non-specialized products, mainly food, beverages & tobacco (-20.5%), Pharmaceutical & medical goods (-2.8%) and All other specialized goods (-1.1%). On the other hand, increases in import were recorded for Books & office supplies (+81.0%) and Textiles, clothing, footwear & leather goods (+4.6%).

Retail and wholesale in hardware, glass & paint

In the third quarter of 2012, the value of imports of hardware, glass & paint fell with 34.4 percent compared to the third quarter of 2011, in contrast to an increase of 39.9 percent recorded in the corresponding period one year earlier.

Retail and wholesale of household appliances, articles and equipment

Import of household appliances, articles & equipment declined by 33.0 percent compared to the third quarter of 2011, following a decrease of 11.7 percent recorded in the similar period one year earlier.

Retail and wholesale of non specialized goods as in supermarkets, minimarkets, etc.¹

In the third quarter of 2012, value of imports of non-specialized products, mainly food, beverage & tobacco decreased by 20.5 percent compared to the same quarter of 2011, following a drop of 11.0 percent recorded during the similar period one year earlier.

Retail and wholesale of pharmaceutical & medical goods

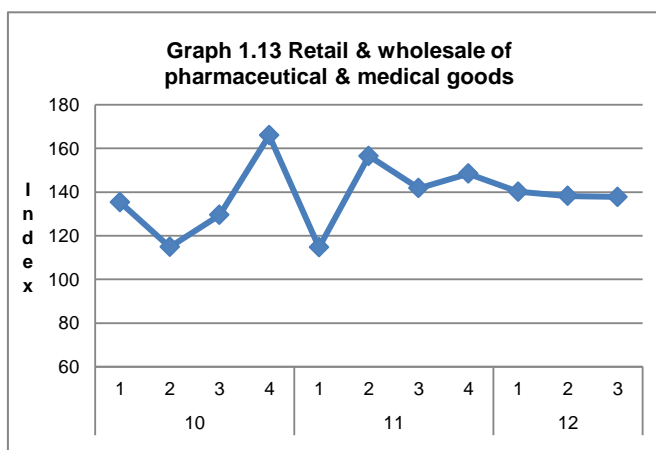

Compared to the third quarter of 2011, import value of pharmaceutical & medical goods fell with 2.8 percent in the third quarter of 2012, in contrast to an increase of 9.5 percent recorded in the similar period one year earlier.

Retail and wholesale of all other specialized goods

In the third quarter of 2012, import value of all other specialized goods declined by 1.1 percent compared to the third quarter of 2011, following a drop of 7.3 percent registered during the similar period one year earlier.

Retail and wholesale of 'Books & office supplies' and 'Textiles, clothing, footwear & leather goods'

In the third quarter of 2012, the total value of imports of "Books & office supplies" and "Textiles, clothing, footwear & leather goods" rose by 81.0 and 4.6 percent respectively, compared to the third quarter of 2011.

¹⁾ Mainly food, beverages and tobacco products as in supermarkets and minimarkets.

1.5 Hotels & Restaurants

Economic activity in the *Hotels & Restaurants* industry increased by an estimated 5.9 percent in the third quarter of 2012, when compared to the third quarter of 2011. In the third quarter of 2012, the number of visitor nights increased by 5.4 percent compared to the similar quarter of 2011. The occupancy rates during the first three quarters of 2012 are not yet available. In Graph 1.15 one can observe the index movement evolving from the first quarter of 2009 up to the third quarter of 2012.

* Provisional

As per end December 2011, the number of available rooms (hotel and time share) was estimated at 7,975. *Note: Riu Palace Aruba not included.*

The occupancy rates in hotels was at 68.8% in the fourth quarter of 2011, while the time share occupancy rate was at 80.4%. Occupancy rates in 2012 are not yet available.

Cruise tourism

During the third quarter of 2012, the total number of cruise ship passengers increased by 106.6 percent compared to the third quarter of 2011. The number of cruise calls rose from 14 calls in the third quarter of 2011 to 16 calls in the third quarter of 2012. In the January-to-September period of 2012, the total number of cruise passengers fell with 0.4 compared to the similar period of 2011.

1.6 Transport

Economic activity in the *Transport* industry increased by 1.3 percent in the third quarter of 2012, when compared to the similar quarter of 2011. In the third quarter of 2012, the number of commercial landings and visitor nights rose by 0.9 and 5.4 percent respectively, compared to the third quarter of 2011. In addition, the number of vessel content (in BRT) as reported by APA increased by 21.9 percent compared to the third quarter of 2011. The Port cargo traffic in absolute numbers and the Public transportation (measured by number of passengers), on the other hand, fell with 11.2 and 2.1 percent, respectively.

1.7 Housing

In the third quarter of 2012, economic activity in the *Housing* industry increased by 3.1 percent compared to the third quarter of 2011, following a 2.0 percent growth recorded during the similar period one year earlier. This growth is directly related to the number of premises connected to the WEB¹, which at the end of September 2012 increased with 1,233 connections compared to the similar period of 2011. One can notice that the *Housing* index kept on growing in a very steady manner.

* Provisional

Methodology

Data are collected from DPO, SVB, Serlimar and Post Aruba. It regards salaries, allowances, compensations and appropriations of the public servants. This compiled data is then corrected with the inflation during the concerning period. Since January 2006, Serlimar and Post Aruba are transferred from public or government ownership to private enterprises. Since August 2007, there are no public servants (status) employed at Post Office Aruba N.V.

CHAPTER 2 Prices

2.1 Consumer Prices

Note to readers

The Central Bureau of Statistics (CBS) has made a series of improvements to keep the measures on changes in consumer prices as accurate and up to date as possible. Effective January 1, 2009, the following important changes in the calculation of the CPI have been implemented. Subsequently, the CPI's for 2007 and 2008 have been revised. For comparison reasons, CBS has decided to change from a national classification system to COICOP, which is an internationally agreed classification system for consumer expenditure and prices. The first level of classification in COICOP consists of 12 divisions covering total consumption expenditures of households. The breakdown into divisions is essentially by purpose. At the second level of disaggregation, the 12 divisions are divided into 47 groups of products, which are in turn divided into 114 classes of products at the third level. These 114 classes are divided in 452 elementary aggregates. As of January 2007, the expenditure weights are based on the Household Expenditure Survey held by CBS during the months of April and May of 2006.

Tables 2.1 & 2.2 show the quarterly percentage changes of the CPI from 2009 to 2012.

Table 2.1 Consumer Prices per quarter 2009 - 2010 (end of period)

Consumer Products	2009						2010

In the third quarter of 2012, the consumer price index decreased by 1.5 percent compared to the previous quarter. The main price decreases were recorded for the following products: Housing (-5.8%), Clothing & footwear (-4.3%), Household operation (-1.4%) and Recreation & culture (-0.2%). On the other hand, increases in average prices have been registered for Transport (+2.9%), Health (+0.9%), Alcoholic beverages & tobacco (+0.7%), Miscellaneous goods & services (+0.4%), Restaurants & hotels (+0.3%), Food & non-alcoholic beverages (+0.3%), Communications (+0.2%) and Education (+0.1%).

Table 2.3 Consumer Price Index and the percentage changes (end of period)

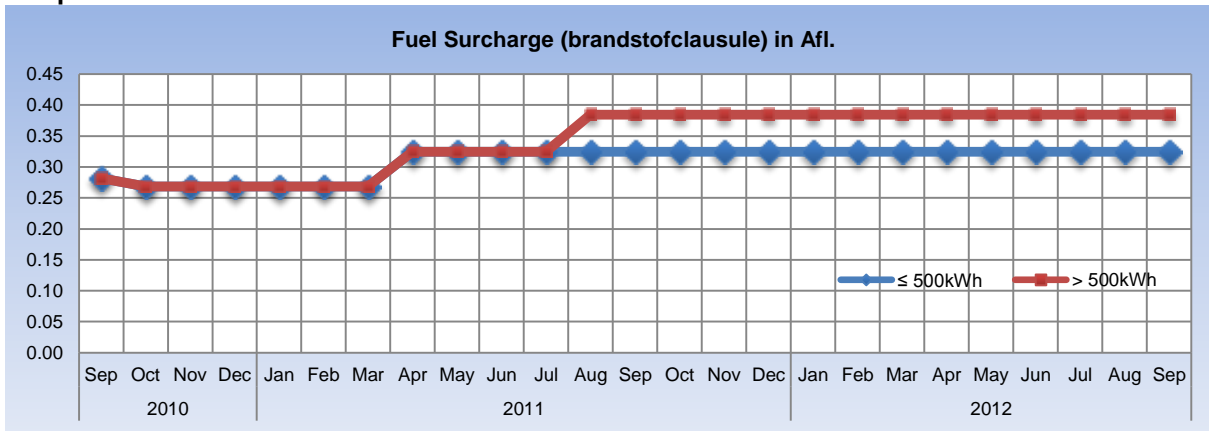

Graph 2.3 Period average prices during the month of September

The following graphs illustrate the price fluctuations of fuel surcharge, water, gasoline and diesel from 2010 to 2012. These price fluctuations determine to a great extent the monthly level of the Consumer Price Index for Aruba.

3.1 Tourism

Tourism has an impact on most of the economic activities on the island, which is why we rely on tourism for our prosperity. The beautiful beaches, weather and peaceful ambience are our important natural resources. To monitor this economic mainstay, we have to observe a variety of relevant events, from the supply as well as the demand side. This is done through various means, including administrative sources from various relevant institutions, as well as tourist surveys that are conducted regularly. The reason different means are utilized for Tourism is that it cannot be reflected in any one single economic activity, but consists of various activities and products. Accordingly and because of its significant impact on the economy, a separate chapter is presented here, which is dedicated solely to Tourism.

3.2 The Supply Side

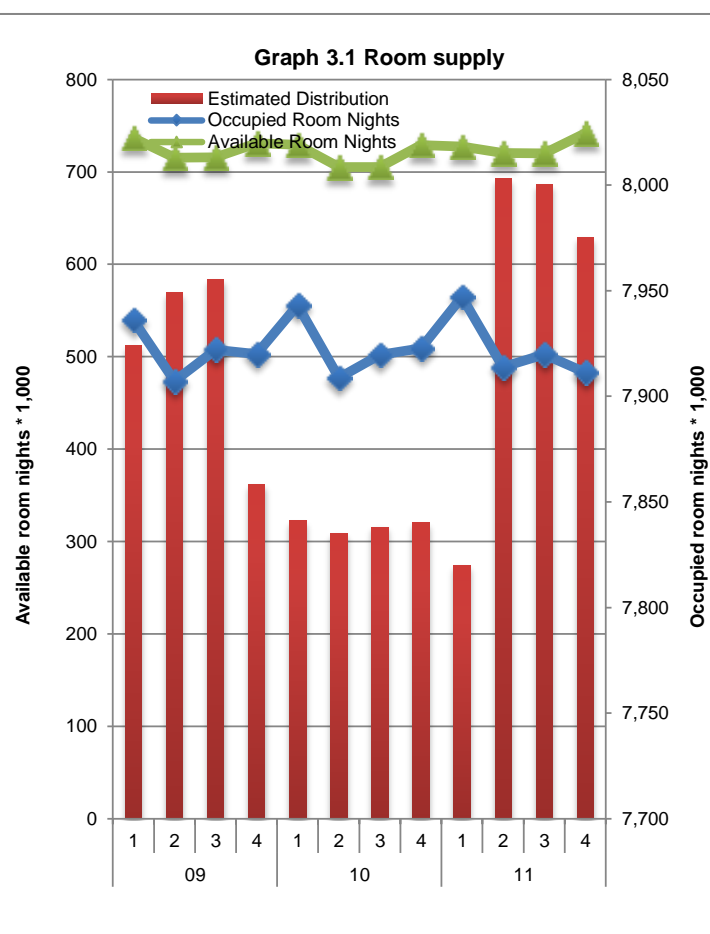

The supply side of Tourism will initially be observed through the number of rooms available from year 2005 up to the fourth quarter of 2011. Table 3.1 shows the room supply and the occupied room nights throughout the period of 2005 up to the fourth quarter of 2011. Hotel statistics for 2012 are not yet available. The information is illustrated per quarter, but it should be noted that the quarterly information is not based on factual data. It is based on an assumed distribution of projected yearly additions.

Table 3.1 Hotel Room Supply & Occupied room nights

Year	Q.	Estimated Distribution	Actual rooms Added/ Deducted to Market	Available Room Nights	Occupied Room Nights
				x 1,000	
2005	1	7,256		675	547

The Revpar has been showing a positive trend since the first quarter of 2010. The Revenue per available room for 2012 is not yet available.

Note to readers

The Revenue per Available Room is derived from the Total net room revenue divided by the total number of rooms available in a property multiplied by the respective number of days in a month.

Table 3.3 Revenue per available room (in Afl.)

Year	Q.	Revpar Hotel	Revpar Timeshare	Revpar Total

In the fourth quarter of 2011, the total room revenue increased by 4.1 percent compared to the same quarter of the previous year, following a growth of 4.7 percent recorded in the similar period one year earlier. Room revenues during 2012 are not yet available.

Table 3.4 Room revenue and Revenue per available room

Source: Central Bureau of Statistics Aruba

3.3 The Demand Side

Note to readers

To study the demand side we will first look at data from the hotel industry, mainly the Occupancy Rate from 2005 up to the fourth quarter of 2011. This will then be compared to the Total Visitors and Total Visitor Nights for that period. Graph 3.5 shows the Occupancy Rate per quarter during 2009 till 2011. The Occupancy Rate reflects the percentage of occupancy of the total available rooms in a relevant period of time. In this case, the rate is determined for each quarter of the reported years.

Table 3.5 Occupancy Rate

Year	Q.	Hotel	Timeshare	Total
2005	1	91.2	83.6	88.1
	2	85.6	74.3	80.7

Table 3.9 shows the stay-over visitors by market. In the third quarter of 2012, the number of stay-over visitors to Aruba increased by 4.4 percent compared to the third quarter of 2011. The stay-over tourism has been showing a positive trend since the third quarter of 2010. In the third quarter of 2012, the number of stay-over visitors from Venezuela rose by 13.8 percent compared to the similar quarter of 2011. Furthermore, the number of stay-over visitors from Canada and the USA increased by 47.1 and 1.3 percent respectively, compared to the third quarter of 2011.

Our largest market, the North American market, represents a market share of 56.8 percent in the third quarter of 2012, down from 57.6 percent recorded in the third quarter of 2011. The South American market, the second largest market, increased from a market share of 27.1 percent in the third quarter of 2011, to 28.6 percent in the third quarter of 2012.

Graph 3.15 Share of tourism expenditure by major markets during 2010

Note to readers

In order to determine the estimated total expenditure made by the visitors, the average daily expenditure is multiplied by the number of stayover visitors and by their average length of stay. In addition, an estimate is made for the accommodation part of a pre-paid package and added to the formula. The estimated total expenditure excludes any other part of pre-paid packages.

Graph 3.16 Estimated total tourism expenditure**Graph 3.17 Changes in percentages of a quarter compared to the same quarter of the previous year**

According to the survey the total amount of money spent by visitors had shown a positive pattern from the fourth quarter of 2009 up to the fourth quarter of 2010, when compared to the similar quarter of the previous year. The estimated total tourism expenditure figures for 2011 and 2012 are not yet available.

In the third quarter of 2012, the tourist tax revenue increased by 3.7 percent compared to the third quarter of 2011, following a 36.0 percent growth recorded in the similar period one year earlier. The casino tax revenue declined 41.0 percent in the third quarter of 2012, when compared to the similar quarter of 2011.

CHAPTER 4 Foreign Trade in Merchandise

4.1 Total import

In the third quarter of 2012, the total value of import to Aruba fell with 1.4 percent compared to the third quarter of 2011, reaching a total value of approximately Afl. 554 million. This drop during the third quarter of 2012 is mainly caused by a decrease in the value of regular import of goods to Aruba (-5.5%). On the other hand, imports of goods to the Freezone of Aruba increased by 42.1 percent compared to the third quarter of 2011. See Table 4.2 and Table 4.3.

Table 4.4 shows the import by major markets. During the third quarter of 2012, the total regular imports declined by 5.5 percent compared to the third quarter of 2011. With the exception of Central America (+17.1%) and the Rest of the World (+39.2%), import decreases were recorded for all markets, particularly, the Caribbean market (-48.6%), the North American market (-5.2%), the European market (-8.6%) and the South American Market (-5.4%). Approximately 49.8 percent of the total value of imported commodities to Aruba comes from the North American market, which increased from 49.6 percent recorded in the third quarter of 2011.

Graph 4.7 Market share of import to Aruba by major market during the third quarter of 2012

The following table shows the storage by major markets. Compared to the third quarter of 2011, import value of goods to the Freezone Aruba rose by 42.1 percent in the third quarter of 2012. The main increases were recorded for the import of goods from Europe (+85.9%), North America (+229.7%), South America (+1.7%) and Rest of the World (+69.6%). The market share of the European market rose from 44.7 percent in the third quarter of 2011 to 58.5 percent in the third quarter of 2012. The market share of the South American market dropped from 51.6 percent in the third quarter of 2011 to 37.0 percent in the third quarter of 2012.

4.2 Total export

During the third quarter of 2012, the total value of exports from Aruba increased by 27.7 percent compared to the third quarter of 2011, following a 26.5 percent growth recorded in the comparable period one year earlier. Both the value of goods in transit and the Regular export of merchandise from Aruba recorded an increase compared to the third quarter of 2011. See table 4.9 and 4.10.

Market share of regular export to Aruba by major market during the third quarter of 2012

Table 4.12 shows the value of goods transit by major markets. Value of goods in transit rose by 31.2 percent in the third quarter of 2012, when compared to the third quarter of 2011. With the exception of the North American market (-90.1%) and the Caribbean market (-80.5%), increases in export of goods in transit from Aruba were recorded for the South American market (+51.8%), Rest of the World (+148.7%), the Central American market (+431.1%) and the European market (+20.5%).

Market share of value of export in transit from Aruba by major market during the third quarter of 2012

5.1 Enterprises

The statistics presented in this chapter covers business and labor information of Aruba, as seen from the demand side. The main purpose of enterprise statistics is to show how enterprises are doing in Aruba. Enterprises in Aruba cover all incorporated and unincorporated enterprises, which are economically active, and that have at least one employee on their payroll. Civil servants, unincorporated enterprises with no employees, private households with employed persons and incorporated enterprises with no employees are excluded from this definition. Enterprises are classified according to the main activity, size and region of workplace. This information is based on quarterly data as collected by the Social Security Bank. This data is submitted to the CBS.

Table 5.1 illustrates the number of employees. At the end of the third quarter of 2012, the total number of employees increased by 2.8 percent compared to the third quarter of 2011, reaching a total of 40,817 employees.

Table 5.1 Number of employees

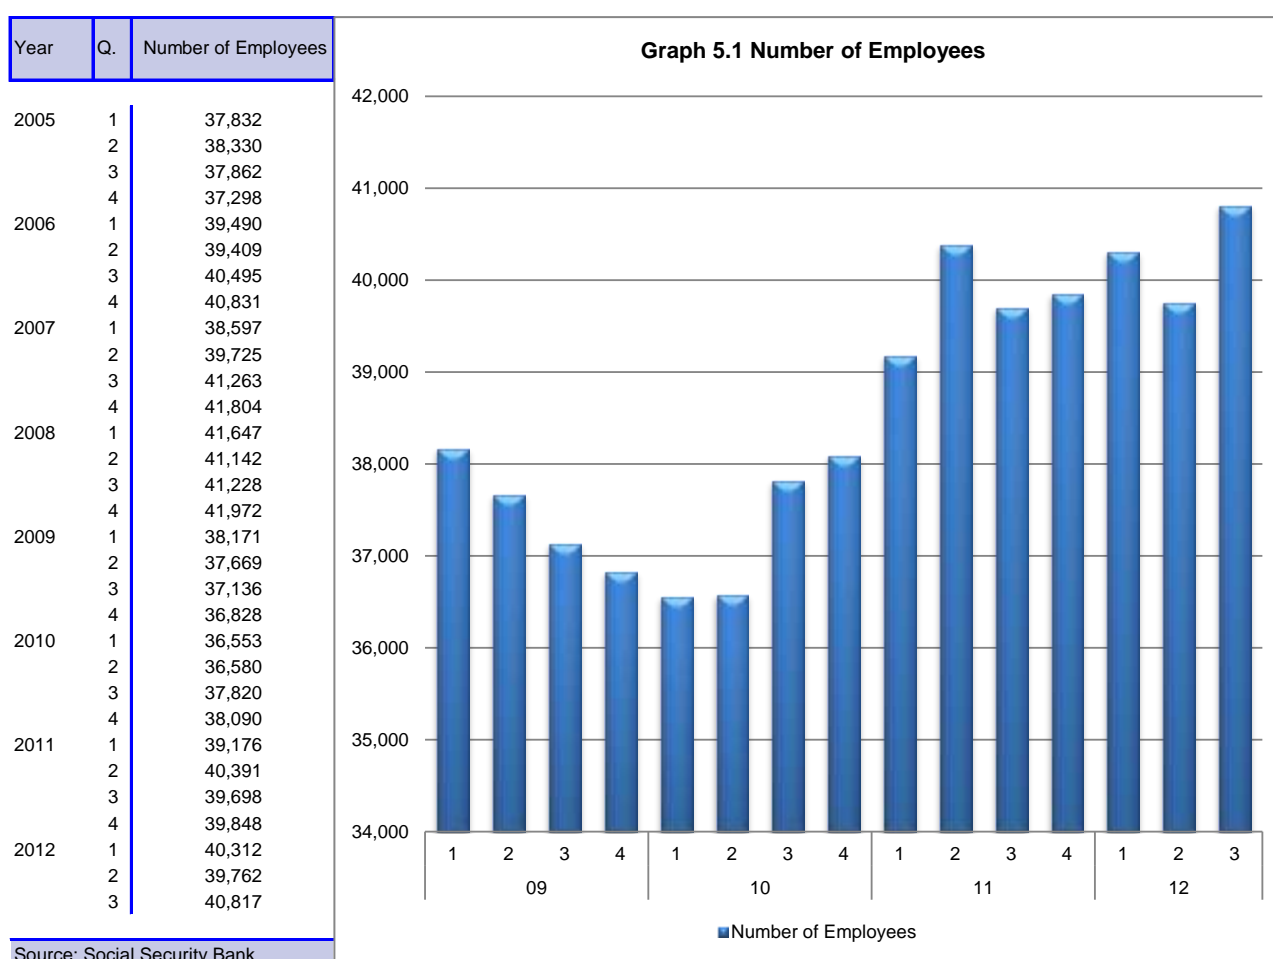

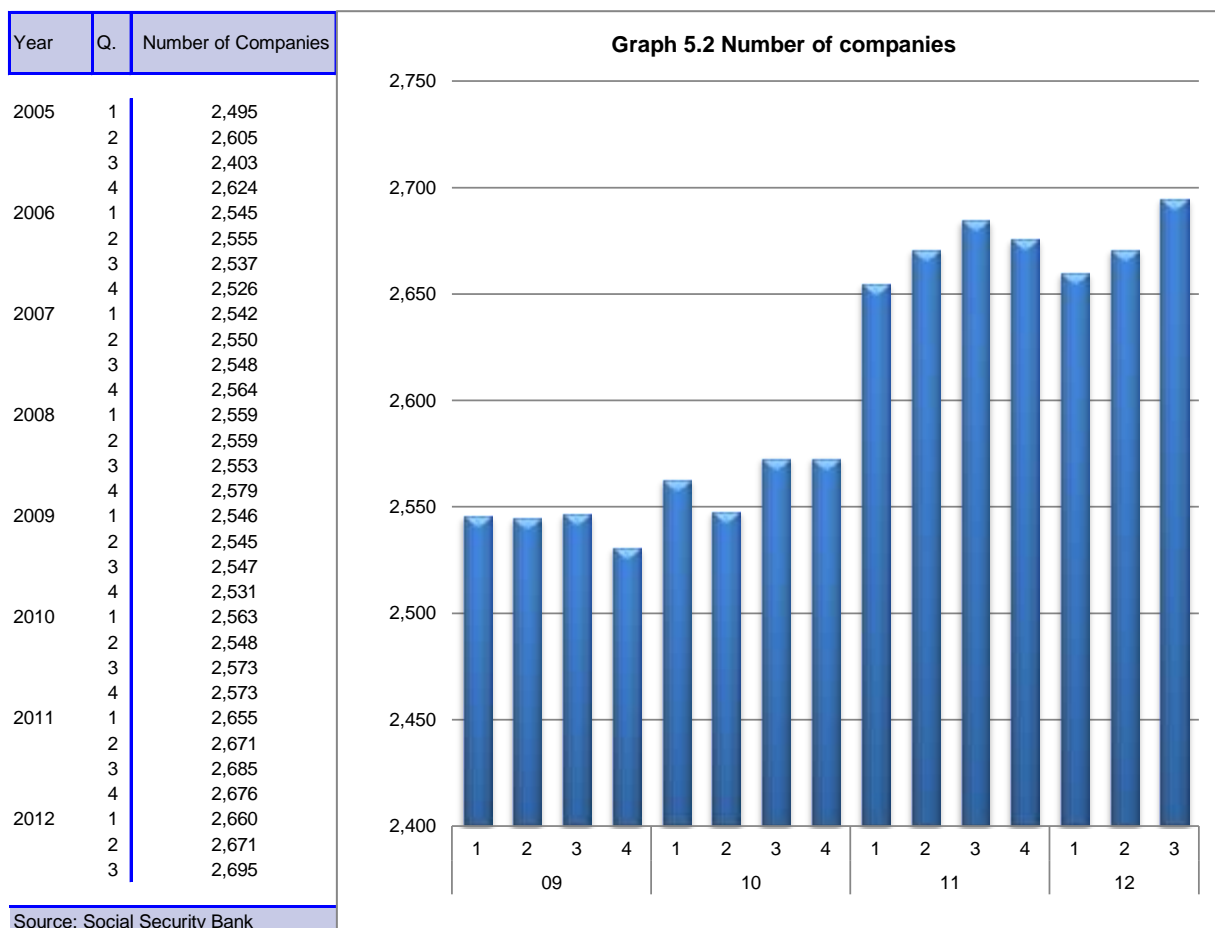

Table 5.2 Number of companies

At the end of the third quarter of 2012, the number of companies rose by 0.9 percent compared to the previous quarter, reaching a total of 2,695 companies. Compared to the third quarter of 2011, the number of companies increased by 0.4 percent in the third quarter of 2012.

6.1 Crude oil prices

Prices of crude oil behave much like any other commodity, with price changes in times of shortage or oversupply. There are many factors that influence the oil prices, for example changes in demand, war, oil crisis, supply regulations. The cost of crude oil has been the main contributor to fluctuations of gasoline prices. Average world crude oil prices registered record high levels in June 2008, reaching \$133.88 per barrel. At the end of September 2012, average crude oil prices reached \$94.51 per barrel, up from \$82.30 per barrel at the end of June 2012. In order to see what impact the oil price developments have on our economy we have selected a group of indicators to illustrate the impact these oil price changes have on the prices in the United States and on our consumer prices. Being our main trading partner, price fluctuations in the US export prices are reflected in the consumer prices on our island. Graph 6.1 depicts the fluctuations of crude oil price, and the producer prices and export prices in the US.

Graph 6.2 Relevant economic indicators (Aruba)

The development of the price of crude oil on the international market has an important and direct impact on the average prices on Aruba. The price of oil determines to a great extent the level of the CPI for Aruba, through the price of water, electricity and gasoline. Graph 6.2 illustrates the fluctuations of the price of crude oil, the consumer price index and the fuel surcharge in Aruba. The high inflation recorded during the 2007 and 2008 is partly contributed to the effect of the turnover tax (BBO) and the higher gasoline prices as a result of higher international oil prices.

It is also intriguing to see how other economies are doing compared to ours. This, in spite of the fact that our indicator is not a complete GDP indicator. Through the development of the Gross Domestic Product (GDP) of various countries one can make comparisons between countries whose economies impact others and see if their evolutions are then harmonized. The development of the GDP indicators is illustrated in table 6.3.

6.2 GDP Indicators

Table 6.3 portrays major industrialized countries only, since this information was not available for Caribbean countries. Nevertheless, we can compare the development of large industrial countries with that of Aruba. The indicator used for Aruba, however, is not a GDP indicator, but remains a Partial Economic Activity Indicator (PEAI) used throughout the Economic Profile.

Table 6.3 Key Economic Indicators

**= the indicator is not a GDP indicator, but is based on the PEA for Aruba, when more industries are included it will become a GDP indicator

CHAPTER 7 Monetary Aspects

7.1 Monetary Survey

In the third quarter of 2012, the total amount of Broad Money increased by 3.2 percent compared to the previous quarter. This growth is caused by an increase of 31.1 percent in the Net Foreign Assets. The Net Domestic Assets, on the other hand, declined by 11.3 percent compared to the second quarter of 2011.

7.2 Government Finance

The *Total tax revenue* consists of the sum of taxes on income and profit, commodities, property, services and the nontax revenues. In the third quarter of 2012, the total tax revenue increased by 8.4 percent compared to the same quarter of 2011. This growth is mainly caused by increases in the Profit tax (+38.2%), Land tax (+142.8%), Excises on cigarettes (+76.8%), Turnover tax (+5.6%), Import duties (+2.3%) and Excises on beer (+13.4%). The total expenditure increased by 34.3 in the third quarter of 2012, when compared to the third quarter of 2011.

Table 7.2 Total Tax Revenue and Expenditure

Source: Tax Collector's Office, CBA

1) Excl. AZV, AOV/AWW and foreign exchange tax.

2) Includes wages, employer's contribution, wage subsidies, goods and services, interest, development fund spending, investment, transfer to AZV, residual item.

In the third quarter of 2012, the Profit tax and Income tax rose by 38.2 and 158.7 percent respectively, compared to the third quarter of 2011. On the other hand, decreases in revenue were recorded for Dividend tax (-62.5%) and Wage tax (-3.7%).

Source: Aruba Ports Authority (APA)

The number of tankers is significantly lower due to the fact that the tankers of Valero are no longer reported to APA. That which is recorded is the number of Mammoth Tankers.

Container ships: barges, car carriers, bulk carriers, container ships, cargo ships and roll on roll off.

Remaining: war ships, research ships, tugboats, small ships, gas carriers, other ships, small vessels, fishing boats and yacht.

9. ANNEX

1.2 Utilities

The *Utilities* industry includes the supply of gas, electricity and water. These three segments are observed together to get an idea of the economic activity of that industry. Their trends are influenced by similar forces and they are weighted by a factor according to their significance in the industry. The total share of Utilities adds up to 3.4% of total value added (GDP), as denoted in the previous section.

1.3 Construction

Construction as an industry refers to all activities that revolve around construction: ground preparation prior to construction, civil engineering, new construction projects as well as renovations, civil and utility construction, infrastructure work, installations, construction finishes (like tiling and other floor covering), repair and maintenance and the renting of construction equipment. The Construction Industry represents 6.2% of total value added (GDP).

1.4 Trade

Needless to say, *Trade* is a very important industry and the second largest industry of Aruba, accounting for 13.7% of our value added (GDP). The Trade industry represents the dynamic and competitive retail and wholesale trade in Aruba. This important industry, thus, influences the Partial Economic Activity Indicator quite significantly and is, therefore, observed closely.

1.5 Hotels & Restaurants

The *Hotels & Restaurants* industry represents a 11.1% share of the GDP, making it the fifth largest industry in Aruba. The industry consists of enterprises engaged in the renting of rooms (hotels, apartments, guest-houses and time-shares) as well as restaurants, cafés, take-away's, etc.. Tourism, which is Aruba's dominant economic influence, contributed greatly to the advance of this industry. While tourists are the main clients of both the hotels and the restaurants on the island, one can observe an increase in business lunches. The industry's contribution to the economy is quite significant, especially when observing the actual size of the industry. For this reason the industry's quarterly performance is of interest for the economy as a whole (See chapter 3 for more information on Tourism).

1.6 Transport, Storage & Communication

The *Transport, Storage & Communication* industry includes ground and pipeline transportation (excluding rentals), water and air transportation, supporting transport activities, like travel agencies, and lastly postal service and telecommunication. The industry has a 8.5% share of total value added of the economy, which makes it the seventh largest industry in Aruba. Because Aruba is a small island surrounded by water, it depends tremendously on the optimal functioning of this industry.

1.7 Housing

The *Housing* industry refers to all the dwelling services provided. This consists of the rent of dwellings and the imputed rent (market value) for the owner from the occupied houses. This industry has a share of 12.5% of GDP. All the people living in a house or apartment are registered under this category as producing units. Consequently, the entire population of Aruba is comprised under the economic activity Housing. The industry reflects the demographic changes, as well as the population's prosperity as a whole. Demographic changes include both, natural and migrating movements, but these cannot be separated from Housing as a whole.

1.8 Public administration & Education

Public administration & Education consists of mostly non-market services, which are difficult to measure regarding output. The production of this industry is measured by wages and salaries. Public administration & Education covers 13.2% of total GDP.
