2. POPULATION

The population figures, presented here, are based on two sources:

- 1. The population censuses that were held in 1981, 1991 and 2000 and
- 2. The mutations in the population register, due to birth, death, marriage, divorce, domiciliation and departure.

At the bottom of each table, we indicated the source of the data. The Population Censuses of 1981, 1991 and 2000 showed discrepancies with the population figures presented by the Registry Office. In both instances, there were more persons registered than counted during the Population Censuses. The discrepancies between the two sources are mainly due to underreporting of departure at the Registry Office. The Central Bureau of Statistics uses a statistical method to make corrections for the errors in the reported migration figures.

14. PRICES

Consumer Price Index

The Consumer Price Index (C.P.I.) measures changes in the level of consumer prices of goods and services over time. The C.P.I. can be used amongst others to measure inflation; for indexation by the government, e.g. taxes, pensions salaries, etc.; for inflation accounting; for deflation of National Accounts, in order to arrive at constant - prices.

Statistics on the C.P.I. have been compiled for Aruba since 1958

At present the C.B.S. compiles a general consumer price index, but also C.P.I.'s for both the Lower Income and Higher Income Groups of the population.
