## **Preface**

Publication about the Second Quarter of Foreign Trade in Aruba contains information on Import to Aruba, Import to Free Zone Aruba, Export from Aruba and Export from Free Zone Aruba. It includes comparisons between the years 2009 till 2012 and over the quarters of 2013 and 2014. The figures pertaining to 2010 till 2013 should still be considered as provisional, while the trade statistics series for 2008 till 2009 are final. The CBS developed a system in which it became possible to process the Foreign Trade data according to General Trade System.

The 1st of March 2014, the Customs Department implemented a new programme that reformed the Customs clearance process, "ASYCUDA" (Automated SYstem for CUstoms DAtay). This is a computerized customs management system designed by UNCTAD to assist customs authorities all over the world to automate and control their core processes. This system takes into account the international Harmonized Commodity Description, coding System (generally referred to as "Harmonized System or simply "HS") and standards developed by ISO (International Organization for Standardization), WCO (World Customs Organization) and the United Nations. It also generates trade data that can be used for statistical economic analysis and which can support government projections and planning.

The system is used by more than 170 countries and economies as a basis for their Customs tariffs and for the collection of international trade statistics. Over 98 % of the merchandise in international trade is classified in terms of the HS. The Harmonized System comprises of 97 Chapters and is arranged in 21 Sections. The pattern of arrangement of goods in the HS is in the increasing degree of manufacture: raw materials, unworked products, semi-finished products, finished products. The HS is thus a universal economic language and code for goods, and an indispensable tool for international trade.

Since January 2009, the CBS processed trade data according to the Harmonized System. In order to facilitate comparisons in time, a link was established between the ASYCUDA-classification and the Harmonized System.

Since the introduction of the Harmonized system codification, in 2009, we tried to publish part of the trade in mineral fuels. Finally it has become possible to publicize part of the mineral fuels import and export going back to 2009. For the Import Trade Elements of Mineral fuels are still excluded "crude oil & butane" and for Export Elements of Mineral fuels are also still excluded: "crude oil, kerosene, gasoline, gas, propane & butane". Before the year 2009 all mineral fuels were excluded.

A special thanks goes to our data-supplier and supporter, namely the department of Duty and Taxes.

For further inquiry on definitions and methodology we refer to the Aruba Foreign Trade Statistics Procedure and Definitions, which is available upon request at the Central Bureau of Statistics.

The Central Bureau of Statistics hopes that this publication will provide all the users with the necessary information. For comments and further information, feel free to contacts us.

#### **II. Explanatory Notes**

#### 1. Trade Data

The collection of data through Customs administration conform ASYCUDA is a computerized customs management system which covers most foreign trade procedures. The system handles manifests and customs declarations, accounting procedures, and warehousing manifest and suspense procedures. The programme registers approximately 10.000 documents per month. CBS analysis shows that some documents were lost and later part of them were recovered with a delay. In order to report findings on a timely basis, it was decided to publish preliminary quarterly data. Possible corrections will be made in the annual FTS publication.

#### 2. Trade Flows

CBS is utilizing the International General Trade System for the processing and publication of all import and export data by commodities and by country for the island of Aruba.\*

#### **Definitions:**

The General trade system is in use when the statistical territory of a country coincides with its economic territory (Free circulation area of Aruba and Free Zone Aruba). Consequently, under the general trade system, imports include all goods entering the economic territory of a compiling country and exports include all goods leaving the economic territory of a compiling country. (International Trade Statistics Concepts and Definitions, Studies in Methods, Series M, No. 52, Rev. 2).

Import from Free Zone Aruba to the free circulation area of Aruba are Excluded under the General Trade System. In order to give an indication of this trade we include an additional table (table 1.b.2. on page 6).

There are two types of movement at the free zone: S9 for goods that arrive from abroad and are stored and E4 for goods exported from Aruba into the freezone. These goods leave the freezone either as a transit good (E8) or an import into Aruba (C48.). By definition, these transactions belong to the Special Trade as well as the General Trade. For many reasons, certain goods are excluded, such as monetary gold, securities, bank notes, coins in circulation and postal items; and goods consigned by a government to its armed forces and diplomatic representatives abroad including Embassies, Consulates, Vertegenwoordiging van Nederland in Aruba (VNO), Kabinet of the Governer and Marinierskazerne. These goods are excluded from the foreign trade statistics according to United Nations recommendations. Certain commodities are also excluded from this publication because of specific statistical thresholds or lack of data. In the former Asycuda, Mineral products (section 5) consist of three categories of which mineral fuels (category 27) are still excluded untill december 2008. Since the introduction of the Harmonized system codification, in 2009, we tried to publish part of the trade in mineral fuels. Finally it has become possible to publicize part of the elements of mineral fuels for import still excluded are "crude oil & butane" and for export still excluded are "crude oil, kerosene, gasoline, gas, propane & butane".

#### 3. Partner Countries

In the case of import, the partner country is the country of consignment or provenance from which goods are dispatched to Aruba without any commercial transaction in intermediate countries.

In case of export, the partner country is the country of destination known at the time of dispatchment as the final country to which goods are delivered.

The tables by country show the 12 most important countries of the trade value by section for each transaction type. These top countries represent the total transactions by Section

### 4. Commodity and Country classification

The HS contributes to the harmonization of Customs and trade procedures for Aruba, and covers around 5500 eight digit commodity codes. The first two digits of the code are universally recognize product codes. The remaining six digits further divide the categories into the specific commodities. For publication purposes, Aruba uses 21 sections to clearly organize these product groups. Until december 2008, the former Asycuda coding system was used by the Customs department of Aruba.

\* Total Imports respectively Total Export include all goods entering respectively leaving the economic territory of Aruba. The economic territory of Aruba comprises Aruba (the free circulation area) and the Freezone Aruba. This is consistent with the General Trade System.

#### 5. Values and Quantities

The value of the goods equals the value of the commodity at the place and time it crosses the border. The basis for valuation is cost, insurance & freight (c.i.f.) for import and free on board (f.o.b.) for export. All values are in thousands of Aruban Florins (\$1=Afl. 1.79) (Vx1000 Afl) quantities are expressed as net weight in thousand of kilos (Wx1000 kg). Blanks on values or quantities indicate that there was no transaction for that commodity code.
