A note to the reader

The following report presents the price statistics for June 2017.

- At the end of June 2017 the Consumer Price Index (CPI) shows a decrease of 0.2% compared to the end of May 2017. The sector which affected the CPI the most was “Transport” (-0.9%), which led to an effect of -0.16 percentage points (ppts) on the Δ CPI of June 2017 (-0.2%).
- Compared to June 2016 the CPI decreased by 0.6%. The sector which affected the CPI the most was “Housing” (-3.1%). Specifically, the price of “Electricity, gas and other fuels” decreased by 13.6% and caused an effect of -1.21 ppts on the end of period inflation of June 2017 (-0.6%).
- The period average inflation for the period June 2016 - June 2017 is -0.4%, which is 0.2 ppts higher compared to the period average inflation for the period June 2015 - June 2016 (-0.6%).
- Utilities (Water and Electricity) did not register price changes in June 2017. The price of gasoline decreased by 2.6% and caused an effect of -0.14 ppts. The price of diesel registered a decrease of 3.0% in June 2017 and had an effect of -0.01 ppt on the Δ CPI of June 2017 (-0.2%).

This report is divided in 7 sections. An overview of the monthly percentage changes in the CPI and index per sector is presented in section 1. Section 2 provides the yearly percentage changes in the CPI and index per sector. The development of indices of main sectors and utilities is outlined in section 3. Section 4 presents the percentage change in the CPI of Aruba’s major trading partners and compares the CPI of Aruba and the USA. Section 5 presents an overview of the monthly and yearly percentage changes of the core inflation. Section 6 presents the price movements in food & catering services. The development of the subsistence level is presented in section 7 and is followed by the appendices.

1 Monthly change of the CPI

1.1 CPI and Inflation

The CPI of the total population of Aruba for the month of June 2017 is 116.70; a decrease of 0.2% compared to the CPI of May 2017 (116.88). An overview of the percentage change in the CPI (Δ CPI) for different periods during 2016 and 2017 is shown in Table 1. The terms percentage change in the CPI and “inflation” (deflation) are considered similar and are used interchangeably. The deflation over the last 12 months (end of period inflation) is 0.6%, while the deflation over a period of 24 months (period average inflation) is 0.4%.

² Period average inflation

Figure 1 depicts the monthly Δ CPI over a period of one year starting from June 2016, whereas the Δ CPI for the month June for the years 2008 to 2017 is illustrated in Figure 2.

1.2 Changes in sector

Figure 3 provides an overview of the percentage changes for the indices per sector for June 2017. The percentage change in index is further denoted as Δ I. The largest Δ I is observed for the sector “Health” with an increase of 1.2%.

1.3 Changes in categories and subcategories

The largest positive and negative Δ I is seen in the categories “Audio-visual, photographic and information processing equipment” (20.6%) and “Other major durables for recreation and culture” (-9.9%). In the “Food and non-alcoholic beverages” sector an increase of 0.1% is observed for the category “Food”, while the “Non-alcoholic beverages” category shows a decrease of 0.2% in June. In the “Transport” sector the major Δ I is observed for the category “Operation of personal transport equipment” (-1.7%), mainly caused by a decrease in “Gasoline” (-2.6%). In the “Recreation and culture” sector the major Δ I is observed for the category “Audio-visual, photographic and information processing equipment” (20.6%)¹.

The categories which influenced the CPI calculation the most are “Audio-visual, photographic and information processing equipment”, “Operation of personal transport equipment” and “Holidays”, which had an effect of respectively, 0.15, -0.14 and

-0.09 ppts on the Δ CPI. Reference is made to tables 16 and 17 in Appendices 1 and 2. Table 16 provides an overview of the indices for the months June 2016, December 2016, May 2017 and June 2017 together with corresponding weights per sector and the monthly, end of period and period average percentage changes for June 2017. In table 17 an overview of the effect on the monthly, end of period and period average CPI per sector and category for June 2017 is presented. The course of indices for 2010 – up to June 2017 is illustrated in Appendix 5.

2.2 Changes in sector

An overview of the percentage change per sector over the period June 2016 - June 2017 is presented in table 3. The largest Δ I is observed for the sector "Education" with an increase of 8.3%. Furthermore, decreases of 3.1%, 1.0% and 0.7% are observed for the "Housing", "Communications" and "Household operation" sectors, respectively. A comparison of the Δ I's for the years 2016 and 2017 is provided in figure 4.

3 Development of indices of main sectors and utilities

3.1 Indices main sectors

The four major sectors, “Housing”, “Transport”, “Food and non-alcoholic beverages” and “Recreation and culture”, constitute 64% of the total weight of the basket of goods and services, which are observed on a monthly basis. An overview of the course of indices for 2009 – up to June 2017 per sector and for the CPI is provided in figures 9-1 to 9-12 in Appendix 5.

Changes in the indices of the sectors “Housing” and “Transport” are mainly the result of changes in the international oil prices and prices of utilities during the respective months. The development of crude oil, fuel surcharge, electricity, water, gasoline and diesel prices is provided in table 5 and in the adjoining figures 6-1 and 6-2.

3.2 Electricity

The price of electricity is determined in Aruban florins (Afl.) for an average usage by households. The average usage is 725.5 kWh per month. The electricity price for an average consumption of 725.5 kWh did not change in June 2017, it remained at Afl. 265.65. Figure 6-1 provides an overview of the course of changes in the electricity price for the period 2011 to 2017.

The component in the electricity tariff which is sensitive to price changes is the fuel surcharge (brandstofclausule). Fuel surcharge for a usage of electricity up to 500 kWh surcharge did not change in June 2017, it stayed at Afl. 16.02 cents per kWh. Fuel surcharge for a usage of electricity between 501 - 1000 kWh did not change in June 2017, it stayed at Afl. 21.72 cents per kWh.

3.3 Water

The price of water is determined in Afl. for an average usage (water consumption) by households. Figure 6-1 provides an overview of the course of changes in the water price for the period 2011 to 2017. The water price for an average usage by households did not change in June 2017, it remained at Afl. 137.05.

3.4 Gasoline and Diesel

The retail price of gasoline decreased by 2.6% from 182.0 cents per liter in May 2017 to 177.3 cents per liter in June 2017. In June 2017, the retail price of diesel registered a decrease of 3.0% from 145.9 cents per liter in May 2017 to 141.5 cents per liter in June 2017.

5 Core inflation

5.1 Core inflation

Core inflation is a measure of inflation which excludes certain items that face volatile price movements e.g. food products and energy. By calculating the core inflation these more volatile components are eliminated from the inflation. Core inflation indices serve to assess the mid- and long-term trend of the overall price level. For the purpose of adjusting monetary policy, many economists focus more intently on the core rate of inflation, as this allows for an in-depth assessment of inflationary processes ongoing in the economy.

5.2 Monthly change of the core inflation

In June 2017 the core inflation (measured over the period June 2016 - 2017) was 0.6%, a decrease of 0.2 ppts compared to June 2016. In June 2017 the food index was 0.5%, while the energy index shows a decrease of 5.0%. Over the past year the food index increased by 0.5 ppts and the energy index increased by 0.7 ppts. Table 9 provides an overview of the monthly inflation and core inflation starting from June 2016.

6.2 End of Period change of Food & catering services for June 2017

Over the last twelve (12) months, the “Food & catering services” has increased by 0.8%. The “Food at home” index shows an increase of 0.6%. The “Fruit” index increased by 7.8%, the largest increase among the “Food at home” food groups, while the “Milk, cheese and eggs” index shows the largest decrease (-3.8%). The index for “Food away from home” shows an increase of 0.7% in June 2017 after an increase of 0.1% in May 2017 and has increased by 1.5% over the last twelve (12) months.

7 Subsistence level

7.1 Subsistence level

The subsistence level is the minimum level of income which is perceived necessary to achieve an adequate standard of living in a given country. The subsistence level is usually determined by estimating the cost of all the essential resources that an average adult consumes in one month or year. This is commonly called a basic needs index, and varies according to the price of food, clothing, housing, transport and other items in the "basket". Equivalence scales are used to adjust for the assumed standard of living, of households of different sizes and composition. The scale assigns a weight of 1.0 for the first adult and 0.5 for each additional adult in the household (aged 15+) and a weight of 0.3 for each child (aged 0-14 years). The subsistence level is based on figures of the report "Bestaansminimum 2010" published by the CBS in December 2010 and is monthly updated for inflation using the monthly CPI. The reference unit used in this report is one of a household consisting of two adults and two children (aged 0-14 years).

7.2 Monthly change of the subsistence level for June 2017

Table 13 provides an overview of the subsistence level for a family of two adults and two children (aged 0-14 years) by sector registered over a period of 5 years for the month June. Over a period of one year the subsistence level decreased by Afl.27, from Afl. 4,344 in June 2016 to Afl. 4,317 in June 2017. The "Housing" sector shows the largest decrease (Afl. 43) over this period.

Glossary

The Consumer Price Index and Inflation

The Consumer Price Index (CPI) measures changes in prices of consumer goods and services by households. Consumer price indices can be intended to measure either the rate of price inflation or deflation as perceived by households or changes in their cost of living. In case of inflation, the percentage change is positive and it indicates a decrease in the purchasing power of the consumers.

Monthly percentage change

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of the previous month.

Year-to-date (ytd)

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of December prior to the year under review.

End of period inflation (last 12 months)

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of the same month of the previous year.

Period average inflation (last 24 months)

The period average inflation is calculated by comparing the annual average CPI of the concerning period with the annual average CPI of the concerning period of the previous year.

Effect

Contribution of all percentage changes (of all respective aggregates) to the CPI.

Core inflation

Core inflation is a measure of inflation that excludes certain items which face volatile price movements. Core inflation eliminates the inflation of certain products that can have temporary price shocks because these shocks can diverge from the overall trend of inflation and give a false measure of inflation. The core rate of inflation is calculated by: total inflation excluding food and energy prices. In part, that is because the core is less volatile and reflects better the relationship of supply and demand in domestic product markets. The core usually is a better measure of the basic rate of inflation that will tend to emerge in the absence of supply shocks.

Food & catering services

The “Food & catering services” index is composed of the indices for the “Food & Non-alcoholic beverages” sector (“Food at home”) and the “Catering services” (“Food away from home”) category.

Subsistence level

The subsistence level is the minimum level of income which is perceived necessary to achieve an adequate standard of living in a given country. The subsistence level is usually determined by estimating the cost of all the essential resources that an average adult consumes in one month or year. This is commonly called a basic needs index, and varies according to the price of food, clothing, housing, transport and other items in the “basket”. The subsistence level is monthly updated for inflation using the monthly CPI.
