A note to the reader

The following report presents the price statistics for October 2024.

- At the end of October 2024, the Consumer Price Index (CPI) shows a decrease of 0.4% compared to the index of September 2024. The sector which affected the CPI the most was “Transport” (-2.4%), which led to an effect of -0.32 percentage points (ppts) on the Δ CPI of October 2024 (-0.4%).
- Compared to October 2023 the CPI increased by 1.0%. The sector which affected the CPI the most was “Transport” (-4.6%), which led to an effect of -0.62 ppts.
- The period average inflation for the periods October 2022 to October 2023 and October 2023 to October 2024 is 2.0%, which is 2.1 ppts lower compared to the period average inflation for the periods October 2020 to October 2021 and October 2022 to October 2023 (4.1%).
- The monthly subsistence level for a household consisting of two (2) adults and two (2) children (aged 0-14 years) increased by Afl. 88, from Afl. 5,432 in October 2023 to Afl. 5,520 in October 2024.
- Utilities (Water and Electricity) did not register price changes in October 2024. The price of gasoline registered a decrease of 6.5% in October 2024 and had an effect of -0.31 ppts. The price of diesel registered a decrease of 4.2% in October 2024 and contributed with an effect of -0.01 ppt on the Δ CPI of October 2024.

This report is divided in 7 sections. An overview of the monthly percentage changes in the CPI and index per sector is presented in section 1. Section 2 provides the yearly percentage changes in the CPI and index per sector. The development of indices of main sectors and utilities is outlined in section 3. Section 4 presents the percentage change in the CPI of Aruba’s major trading partners and compares the CPI of Aruba and the USA. Section 5 presents an overview of the monthly and yearly percentage changes of the core inflation. Section 6 presents the price movements in food & catering services. The development of the subsistence level is presented in section 7 and is followed by the appendices.

1 Monthly change of the CPI

1.1 CPI and Inflation

The CPI of the total population of Aruba for the month of October 2024 is 109.19; a decrease of 0.4% compared to the CPI of September 2024 (109.58). An overview of the percentage change in the CPI (Δ CPI) for different periods during 2023 and 2024 is shown in Table 1. The terms percentage change in the CPI and “inflation” (deflation) are considered similar and are used interchangeably. The inflation over the last 12 months (end of period inflation) is 1.0%, while the inflation over a period of 24 months (period average inflation) is 2.0%.

Figure 1 depicts the monthly Δ CPI over a period of one year starting from October 2023, whereas the Δ CPI for the month October for the years 2015 to 2024 is illustrated in Figure 2.

1.2 Changes in sector

Figure 3 provides an overview of the percentage changes for the indices per sector for October 2024. The percentage change in index is further denoted as Δ I. The largest Δ I is observed for the “Transport” sector with a decrease of 2.4%.

1.3 Changes in categories and subcategories

The largest positive and negative Δ I is seen in the categories “Other major durables for recreation and culture” (17.2%) and “Health products and services n.e.c.” (-12.5%). In the “Food and non-alcoholic beverages” sector increases were observed for the categories “Food” (0.1%) and “Non-alcoholic beverages” (0.2%). In the “Housing” sector the major Δ I is observed for the category “Maintenance and repair of the dwelling” (-1.5%). In the “Transport” sector the major Δ I is observed for the category “Operation of personal transport equipment” (-3.8%). In the “Recreation and culture” sector the major Δ I is observed for the category “Other major durables for recreation and culture” (17.2%)¹.

The categories which influenced the CPI calculation the most are “Operation of personal transport equipment”, “Maintenance and

repair of the dwelling” and “Clothing”, which had an effect of respectively, -0.31, -0.09 and 0.05 ppts on the Δ CPI. Reference is made to tables 16 and 17 in Appendices 1 and 2. Table 16 provides an overview of the indices for the months October 2023, December 2023, September 2024 and October 2024 together with corresponding weights per sector and the monthly, year-to-date (ytd), end of period and period average percentage changes for October 2024. In table 17 an overview of the effect on the monthly, year-to-date (ytd), end of period and period average CPI per sector and category for October 2024 is presented. The course of indices for 2012 – up to October 2024 is illustrated in Appendix 5.

3 Development of indices of main sectors and utilities

3.1 Indices main sectors

The four major sectors, “Housing”, “Transport”, “Food and non-alcoholic beverages” and “Recreation and culture”, constitute 58% of the total weight of the basket of goods and services, which are observed on a monthly basis. An overview of the course of indices for 2010 – up to October 2024 per sector and for the CPI is provided in figures 9-1 to 9-12 in Appendix 5.

Changes in the indices of the sectors “Housing” and “Transport” are mainly the result of changes in the international oil prices and prices of utilities during the respective months. The development of crude oil, fuel surcharge, electricity, water, gasoline and diesel prices is provided in table 5 and in the adjoining figures 6-1 and 6-2.

5 Core inflation

5.1 Core inflation

Core inflation is a measure of inflation which excludes certain items that face volatile price movements e.g. food products and energy. By calculating the core inflation these more volatile components are eliminated from the inflation. Core inflation indices serve to assess the mid- and long-term trend of the overall price level. For the purpose of adjusting monetary policy, many economists focus more intently on the core rate of inflation, as this allows for an in-depth assessment of inflationary processes ongoing in the economy.

5.2 Monthly change of the core inflation

In October 2024 the core inflation (measured over the period October 2022 - 2024) was 3.2%. In October 2024 the food index was 2.1%, while the energy index shows a decrease of 3.1%.

Figure 11 depicts the monthly Δ Food and catering services over a period of one year starting from October 2023.

6.2 End of Period change of Food & catering services for October 2024

Over the last 12 months, the “Food & catering services” increased by 2.5%. The “Food at home” index showed an increase of 2.5%, where eight (8) of the “Food at home” food groups increased over the period.

The “Fruit” and “Non-alcoholic beverages” indices increased both by 5.3%, the largest increases among the “Food at home” food groups. Furthermore, other significant increases were posted in the indices for “Milk, cheese and eggs” (4.6%), “Food products n.e.c.” (3.2%), “Meat” (1.8%) and “Sugar, jam, honey and other confectionery” (1.7%). The largest decrease during this period was registered in the index for “Fish and other seafood” (-3.0%).

The index for “Food away from home” increased by 2.7% over the last 12 months.

Table 18 provides an overview of the monthly and end of period percentage changes and effect for October 2024 for the food groups.

7 Subsistence level

7.1 Subsistence level

The subsistence level is the minimum level of income which is perceived necessary to achieve an adequate standard of living in a given country. The subsistence level is usually determined by estimating the cost of all the essential resources that an average adult consumes in one month or year. This is commonly called a basic needs index, and varies according to the price of food, clothing, housing, transport and other items in the "basket". Equivalence scales are used to adjust for the assumed standard of living, of households of different sizes and composition. The scale assigns a weight of 1.0 for the first adult and 0.5 for each additional adult in the household (aged 15+) and a weight of 0.3 for each child (aged 0-14 years). The subsistence level is based on figures of the report "Bestaansminimum 2010" published by the CBS in December 2010 and is monthly updated for inflation using the monthly CPI. The reference unit used in this report is one of a household consisting of two adults and two children (aged 0-14 years).

7.2 Monthly change of the subsistence level for October 2024

Table 13 provides an overview of the subsistence level for a family of two adults and two children (aged 0-14 years) by sector registered over a period of 5 years for the month October. Over a period of one year the subsistence level increased by Afl. 88, from Afl. 5,432 in October 2023 to Afl. 5,520 in October 2024. The "Food and non-alcoholic beverages" (Afl. 56) sector shows the largest increase, over this period.

Glossary

The Consumer Price Index and Inflation

The Consumer Price Index (CPI) measures changes in prices of consumer goods and services by households. Consumer price indices can be intended to measure either the rate of price inflation or deflation as perceived by households or changes in their cost of living. In case of inflation, the percentage change is positive and it indicates a decrease in the purchasing power of the consumers.

Monthly percentage change

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of the previous month.

Year-to-date (ytd)

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of December prior to the year under review.

End of period inflation (last 12 months)

Percentage change in price indices of any aggregates of the CPI in relation to the respective price indices of the same month of the previous year.

Period average inflation (last 24 months)

The period average inflation is calculated by comparing the annual average CPI of the concerning period with the annual average CPI of the concerning period of the previous year.

Effect

Contribution of all percentage changes (of all respective aggregates) to the CPI.

Core inflation

Core inflation is a measure of inflation that excludes certain items, which face volatile price movements. Core inflation eliminates the inflation of certain products that can have temporary price shocks because these shocks can diverge from the overall trend of inflation and give a false measure of inflation. The core rate of inflation is calculated by: total inflation excluding food and energy prices. In part, that is because the core is less volatile and reflects better the relationship of supply and demand in domestic product markets. The core usually is a better measure of the basic rate of inflation that will tend to emerge in the absence of supply shocks.

Food & catering services

The “Food & catering services” index is composed of the indices for the “Food & Non-alcoholic beverages” sector (“Food at home”) and the “Catering services” (“Food away from home”) category.

Subsistence level

The subsistence level is the minimum level of income, which is perceived necessary to achieve an adequate standard of living in a given country. The subsistence level is usually determined by estimating the cost of all the essential resources that an average adult consumes in one month or year. This is commonly called a basic needs index, and varies according to the price of food, clothing, housing, transport and other items in the “basket”. The subsistence level is monthly updated for inflation using the monthly CPI.
